Senate blocks vote on energy

WASHINGTON — The Senate on Friday decided not to vote on an energy bill that included a proposal to increase corporate average fuel economy standards. Sen. Bennett Johnston, D-La., fell 10 votes shy of the 60 needed to proceed.

Johnston's office indicated that a revised proposal could be resubmitted later this month. Johnston had backed a plan to raise CAFE standards 20.9 percent by model year 2001.

A competing bill by Sen. Richard Bryan, D-Nev., calling for a 40 percent increase in CAFE by 2001, has not been scheduled for Senate debate. After Friday's vote, Bryan plugged his bill, warning that the Japanese "intend to use improved fuel economy to bludgeon our auto industry once again."

Sale to help Chrysler now; Mitsubishi must wait

LINDSAY CHAPPELL, MARY CONNELLY and MARY ANN MASKERY
Staff Reporters

Mitsubishi Motors Corp., which has sought more production space to supply its growing U.S. retail trade, now owns 100 percent of a plant whose products are more oriented to Chrysler Corp. than ever before.

Chrysler's sale of its 50 percent stake in Diamond-Star Motors Corp. last week leaves Mitsubishi bearing the cost of developing some new Chrysler vehicles, yet analysts believe the Japanese ex-partner may come out better in the long run.

Under terms of the buyout:

- Mitsubishi agreed to continue a future-product plan that is slanted toward providing Chrysler products. By 1994, the Diamond-Star plant in Normal, Ill., will produce

Big 3 must book huge losses

Retirees' health-care costs to slash equity by billions

Chrysler loses $82 million > 4

MARY CONNELLY, PHIL FRAME and KATHY JACKSON
Staff Reporters

Big 3 financial executives are trying to decide when to make a mandated accounting change that could slash more than $20 billion from their combined balance sheets in 1993.

The change could show up as multi-billion-dollar losses on income statements and will drastically cut shareholders' equity, or net worth.

Cash flow and operations will not change under the new accounting standard for future retirement benefits. But balance sheets will take a big hit, and reported annual earnings will be reduced by hundreds of millions of dollars each subsequent year as automakers account for the liability for future post-retirement health and other benefits for both active employees and current retirees.

Until now, companies have simply booked the expense of those benefits as they were paid.

"Obviously, with our very large retiree population, our very large work force, it is going to have a tremendous impact on General Motors," said GM Chairman Robert Stempel. "But we haven't forecast the amount yet."

The accounting change shines a spotlight on the automakers' huge health-care costs, which have been growing at double-digit rates. According to a 1990 study issued by Sanford C. Bernstein & Co. Inc. in New York, health care cost $579 for each GM car, $357 for each Ford and $452 for each Chrysler vehicle. The study said Japanese transplant operations pay $85 in health-care costs for each vehicle produced.

The accounting change doesn't actually cost corporations more than they currently pay, but it forces companies to account for the enormous liabilities of the future.

Chrysler Corp. estimates its one-time charge at between $4 billion and $6 billion. If taken at once, the charge could effectively eliminate the company's shareholders' equity of $6 billion.

Ford's charge is estimated at between $5 billion and $9 billion, compared to shareholders' equity of $20.4 billion as of Sept. 30.

General Motors, which has both more employees and more retirees than Ford and Chrysler combined, will certainly have to take an even bigger charge.

The accounting switch will add a liability to the balance sheet for all the non-pension, post-retirement benefits that will be owed in

Staff Reporters

NEW YORK — More than a third of the nation's cars and light trucks would have to meet California's stricter emissions standards if all the states that have now endorsed the higher standards adopt them.

The effort to expand the California club gained more political clout last week when the governors of nine states and the mayor of Washington signed an agreement to support California-style rules in their jurisdictions.

The states are Delaware, Maine, Maryland, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania and Virginia.

Those states plus California and three other states that are considering adopting California rules represented 36.7 percent of U.S. car and light-truck registrations in 1989 and 1990. California represented 11.5 percent, so the total bloc would be more than three times the size of California.

Predictably, auto industry representatives met the news with a groan, even though last week's agreement had no immediate practical effect. All those states had already taken preliminary steps toward imitating California's rules, and the new rules have already survived court challenges in some states.

"This will make our job a lot more difficult," said John Schutz, director of powertrain and emissions for Nissan Research and Development Inc. in Gardena, Calif.

Advent of electric car creates hurdles for NHTSA, GM dealers

PHIL FRAME
Staff Reporter

As General Motors races to become the first manufacturer to mass-produce a modern electric car, potential delays lie in wait that aren't directly related to development of the vehicle.

National Highway Traffic Safety Administration regulations must be interpreted or rewritten, a process that will take at least 18 months.

And thousands of dealership service departments must be prepared to handle electric cars. Technicians must be trained to do the work, and new service equipment may have to be invented.

GM has made it clear that it wants to be the first on the market with a modern, mass-produced electric car patterned after the Impact, which debuted on the auto show circuit in January 1990.

Public response was so strong, it convinced GM that it should manufacture the car. Last spring, GM announced that the car will be built in Lansing, Mich., and has since tabbed the suppliers for the car's "powertrain" components. Plans for start of production are

dollars at the low end of its 1992 line and about $2,000 for some of its most expensive models.

The 325i sedan, introduced as an early 1992 model last June, stays at $27,990. It's the first of several models in an all-new 3 series, with a new coupe due in 1992.

The 318i convertible rose $370, or 1.3 percent, to $28,870. The 325i convertible is $36,320, up 1.7 percent. They are the only remaining models of the old 3-series.

The mid-range 525i went up $1,100, or 3.2 percent, to $35,600. The more powerful 535i is $44,350, up 4.1 percent.

The 735i jumped $2,090, or 4.1 percent, to $52,990. The 735i went up 3.5 percent to $56,950.

Prices for the 750iL and 850i will be announced after Jan. 1.

Honda promises to buy more foreign chips

TOKYO — Honda Motor Co. said it has raised its target for installation of foreign-made semiconductors in Japan- and U.S.-built cars.

The company said last week that for the 1993 fiscal year ending in February 1994, it would boost its use of foreign-made chips to 20 percent of total from a current target of 10 percent. Honda said it expects foreign companies to supply about 9 percent of its semiconductor requirements in the current fiscal year, which ends next February.

The company said the value of its foreign purchases in the 1993 fiscal year will rise to about 5 billion yen (about $38.2 million at current rates) from 1.8 billion yen ($13.7 million) in the current fiscal year.

The semiconductors are used for engine-control systems, instrumentation, cruise-control systems, air conditioners and audio systems.

Honda also plans to begin applying foreign-made chips to anti-lock braking systems and air bags. Honda expects to set up development collaborations with foreign suppliers, the company said.

VW defers payments for Calif. fire victims

SAN FRANCISCO — Volkswagen dealers in the San Francisco area are offering special deferred-payment financing to Oakland and Berkeley, Calif., residents who lost property in the area's fire disaster last month.

Residents of Oakland and Berkeley will be allowed to defer payments for up to four months when they purchase a new 1991 or 1992 Volkswagen from any of the area's 16 VW dealers.

Emil Paul, general manager at Broadway Volkswagen in Oakland, said the offer is meant to help those residents who lost vehicles in the fire and don't have the resources to begin making new-car payments right away.

"This is our small way of helping those people get back on their feet," said Paul.

Nissan will try again to keep injury logs secret

NASHVILLE, Tenn. — Nissan Motor Manufacturing Corp. U.S.A. says it will again appeal a Tennessee ruling ordering the company to turn over worker injury logs to four former employees.

The logs became an issue in a 1989 UAW organizing campaign when workers said injury rates were high at the plant. Nissan said the plant's injury rate was among the lowest in the industry. The organizing drive failed.

Last month, an administrative law judge upheld a 1989 verdict from the Tennessee Department of Labor that Nissan must release the injury reports. On Oct. 25, an independent review committee appointed by the governor of Tennessee upheld the recent administrative judge's ruling. Nissan, which contends that release of the data would be a violation of employees' privacy, has not paid the fine and will now take the case to chancery court in Nashville.

Ford's Marine Midland changes name to Primus

BRENTWOOD, Tenn. — Ford Motor Co.'s Marine Midland Automotive Financial Corp. subsidiary has changed its name to Primus Automotive Financial Services Inc.

Primus President George Watts said the company now has established wholesale finance relationships with 210 dealerships, and receivables have grown from approximately $500 million to $650 million over the past year. Ford acquired the company in 1990.

Watts said Primus expects the number of wholesale customers to increase to about 300 next year. Primus is processing about 5,000 retail contracts a month for import dealerships. Volume is expected to reach almost 8,000 contracts a month next year, Watts said.

Primus provides private-label financing through Mazda American Credit and Jaguar Credit and was recently named as the lender of choice for Daihatsu America Inc.

The company also is helping Subaru of America Inc. establish a retail leasing program in markets outside New England.

Primus will move its headquarters from Brentwood to nearby Nashville in January.

Cummins forms venture with Soviet truckmaker

COLUMBUS, Ind.— Cummins Engine Co. said last week that it has formed a 50-50 joint venture with Kamaz Inc. of the Soviet Union. It is called KamDizel.

The venture will handle application engineering, marketing, servicing and eventually production of Cummins engines. Its marketing and application work will cover engines ranging from 76 to 2,000 horsepower.

The engines are to power Kamaz trucks, particularly those for export; Ikarus buses and other buses; and trucks and industrial equipment produced within the Soviet bloc.

Engines will be supplied initially by Cummins' plant in the United Kingdom.

Cummins is a major producer of diesel engines, and Kamaz is the world's largest maker of heavy-duty trucks.

briefly

Honda minivan too big for Ohio

Honda Motor Co. Executive Vice President Shoichiro Irimajiri says it would take Honda four years to prepare a minivan for the U.S. market, partly because the company has no line to build it on. A minivan would not fit on Honda's Ohio assembly lines because "the size of the body is too big. That is our problem, we have no manufacturing for the minivan."

POLK MAKES MONEY — Not all auto-related companies write with red ink during depressed economic times. The automotive marketing division of R.L. Polk & Co., a research and marketing firm in Detroit, is projecting a boost in revenues this year. "A depressed auto market helps our business," said Joseph Cirrincione, president of Polk's Automotive Marketing Group. "Auto companies step up marketing, and they tend to re-evaluate their dealer base." Cirrincione says Polk's clients include every automaker doing business in the United States. He says revenues from the automotive division will be up 7.5 to 8 percent from 1990 and will account for about one-third of the company's projected $300 million total revenues this year.

BRAKING HABITS — Motorists on Germany's *autobahnen* aren't used to keeping the pedal *from* the metal, but in bad weather they'll have to do just that. The German government, in an effort to eliminate highway pileups that routinely involve dozens of vehicles, has imposed a weather-based speed limit. A 50-kilometer-per-hour (30 mph) limit now kicks in whenever heavy fog cuts visibility to less than 50 meters (165 feet). Speeds on the *autobahn* usually average 90 mph.

OL' FAITHFUL —A Tennessee dealership is giving new meaning to the phrase "repeat business." Last week, Tarr **Chevrolet** in Jefferson City delivered a 1992 Caprice to Buford Bible, an 86-year-old retired school teacher. In 1954, Bible ordered his first of 35 Tarr Chevrolets, a turquoise and white Bel Air. He has bought a new one every year since 1957. Five years ago owner Lonus Tarr extended his "Buy 20 cars, get one free" policy to give Bible a free Chevy after his 30th purchase. He's been promised another after his 40th.

WHO'S THE BOSS? — For an 80-year-old whose family controls more than 50 dealerships, Victor Potamkin was quite humble when Cadillac big-wigs led by General Manager John Grettenberger showed up at last week's grand re-opening of Potamkin **Cadillac-Buick-Chevrolet** in Manhattan. "I have to go now," Potamkin told a TV crew that was interviewing him when Grettenberger arrived. "He's my boss."

Potamkin bows to the boss

GOOD NEWS, KINDA — A friendly observer based in our nation's capital spotted this one: Following the Clarence Thomas confirmation hearings and Congressional check-bouncing disclosures, a national poll shows the reputation of automobile dealers is now 77 points higher than that of senators and members of Congress.

Nissan, Mitsubishi report earnings drop

Weak sales, rising costs cited for 1st-half falloffs

MARY ANN MASKERY
Staff Reporter

TOKYO — Two of Japan's biggest automakers, No. 2 Nissan Motor Co. and No. 4 Mitsubishi Motors Corp., last week posted sharp declines in operating profit for the first half of their fiscal years in the face of continuing weak sales and rising costs.

Nissan said its unconsolidated operating income for the six months ended Sept. 30 slid 70.1 percent from a year earlier, to 21.7 billion yen (about $167 million), as worldwide vehicle sales slipped 2.9 percent, to 1.15 million units.

Unit sales in the home market fell 4.9 percent from the record level of a year earlier to 682,449, the company said.

Net income fell 48.2 percent, to 24.27 billion yen (about $186 million), Nissan said.

The company said it expected to post lower earnings for the full fiscal year as rising costs offset the benefit of a projected increase in sales.

"Investments aimed at ensuring future growth will continue to swell operating expenses" in the second half, offsetting the benefits of stronger domestic demand, said Atsushi Muramatsu, Nissan's executive vice president.

The company said it also expects higher steel costs in the second half, as well as higher research costs to meet environmental concerns in both the United States and Japan.

Meanwhile, Mitsubishi said Friday that its operating profit for the first half of its fiscal year slid 24.4 percent from a year earlier and that it expected weaker earnings for the full year.

The report followed by only days the company's announcement that it will pay a total of $450 million to take over Chrysler Corp.'s 50-percent share of Diamond Star Motors Inc., the two companies' joint-production venture in Normal, Ill.

That cost will be reflected in the company's second-half results.

Mitsubishi said the drop to 26 billion yen (about $200 million), reflected weakness in the Japanese truck market, high development and operating costs, and weak sales for its mainstream Mirage and Galant models.

Net income, which reflects tax treatment and other considerations, rose 21.2 percent to 14.6 billion yen (about $112 million). The company said it expected profits to continue weak for the remainder of the fiscal year.

Mitsubishi said home-market unit sales rose fractionally in the period, to 372,019 from 360,199 a year earlier.

Exports also increased, from 269,621 to 295,003.

Even Toyota Motor Corp., the Japanese industry's biggest and wealthiest producer, has put a clamp on spending in anticipation of sharp profit declines.

In recent weeks, the company has warned all supervisors of the need to curb costs in their respective sections.

Tighter belt limited loss, says Chrysler

MARY CONNELLY
Staff Reporter

HIGHLAND PARK, Mich. — Chrysler Corp. claims its ongoing corporate restructuring is making the company fiscally fit.

Chrysler last week said it lost $82 million, or $0.36 per common share, in the third quarter, considerably less than the loss of nearly $200 million anticipated by auto analysts.

General Motors lost $1.06 billion in the third quarter, and Ford Motor Co. posted a $574.4 million deficit.

"We believe that our results compared to Ford's and GM's indicate that we are pretty well along when compared to them in terms of achieving fundamental change in the way we do business, both in terms of the efficiency of the day-to-day operations as well as the effectiveness of our new-model development process or platform team concept," said Jerome York, Chrysler executive vice president of finance.

In the third quarter, the company achieved for the first time $3 billion in annualized cost reductions, York said.

Third-quarter results also reflected a decline in the sales percentage of lower-margin fleet units.

"Our fleet sales in the third quarter ran 16 percent of the total vs. 25 percent in the second quarter," York said.

"We believe the decline is a function of two things. The third quarter is normally lower than the second because of the daily rental companies' buying cycle. And manufacturers have been taking steps to try to stretch out the length of time the car rental units are in service. We believe that was a factor as well."

Per-vehicle incentive costs were unchanged from the second quarter and averaged about $1,300 per unit in the third quarter, York said.

York: Factor in daily rental sales

Chrysler also improved its cash position in the third quarter. The company's cash horde rose to $2.5 billion, up from $2.4 billion at the end of the second quarter.

Chrysler reported the $82 million loss on total sales and revenues of $7.5 billion for the quarter. That compares to a loss of $214 million on sales and revenues of $6.5 billion for the 1990 period.

For the first nine months of 1991, Chrysler lost $892 million, compared to net earnings of $37 million for the same period of 1990.

Sales and revenues for the first nine months of 1991 were $21.1 billion compared to $23.0 billion for the 1990 period.

Chrysler's dealers sold 614,433 cars and 679,024 trucks and minivans in the United States and Canada in the first nine months of 1991.

Worldwide factory sales in the first nine months of 1991 were 1,352,002 vehicles, compared to 1,491,950 for the same period a year ago.

Chrysler Financial Corp., the company's financial services subsidiary, reported third-quarter earnings of $81 million, compared to $83 million in the third quarter of 1990.

THIRD QUARTER FINANCIAL RESULTS

	Total sales (billions)	Change from '90 (billions)	Net income (millions)	Change from '90 (millions)
GM	$28.9	$−1.9	$1,060	$+919
Ford	21.1	−1.9	574	−676
Chrysler	7.5	+1.0	82	+132

Recession, not dealers, blamed for 24% hike in bankruptcies

CHARLES M. THOMAS
Staff Reporter

Bankruptcy filings on indirect auto loans soared 24 percent in 1990 and are expected to climb another 21.2 percent this year, which means banks probably won't loosen credit policies soon.

The figures released by the Consumer Bankers Association aren't expected to affect the relationship between lenders and dealers. Indirect loans originate at dealerships, rather than at bank offices.

"Many of these loans were made two or three years ago," said George Williams, chairman of the Consumer Bankers Association and senior vice president of AmSouth Bank, in Birmingham, Ala.

Financial institutions have spent the last two years evaluating and strengthening credit guidelines. Even the automakers' captive finance companies have instituted tiered credit ratings.

"The rise in bankruptcies is certainly not the dealers' fault," said Williams. "This recessionary period is part of what we must pay to get back to the fundamentals of sound credit."

Because consumer bankruptcies are responsible for a bigger share of auto loan losses, 87 percent of the lenders in the survey said they are taking steps to prevent them.

Of those, 38 percent said they offer credit counseling to the customer; 35 percent said they have upgraded qualifications for credit; and others said they have offered loan extensions, refinancing, debt consolidation and reduced payments to help customers avoid bankruptcy.

The banks aren't the only ones helping customers avoid bankruptcy. A Ford Motor Co. spokesman said the company's repossession rate has remained low, bucking industry trends because "we will do almost anything to help customers stay in their cars."

At General Motors, the repossession rate (annualized percentage of the average number of contracts outstanding) was 2.64 for the first nine months of this year, up from 2.52 for the same period a year ago.

In the Consumer Bankers Association survey, 64 percent of the respondents said they are looking at systems to track bankruptcies. And 29 percent said they now use a bankruptcy predictor model like those offered by credit bureaus and credit scoring companies.

Seventy-seven percent of the lenders said customers filed for bankruptcy because they were overextended on credit. The

Film fuels debate on crash-test data

MAX GATES
Staff Reporter

WASHINGTON — A spat here last week over the crashworthiness of small cars has spotlighted an open question: Should consumers believe their eyes or the test scores when judging a car's safety?

Data from dummies used in car crash tests give a less complete picture of the safety of an automobile than films of the crash, say a federal official and an auto safety investigator.

Not so, says a consumer safety advocate, who argues crash films are misleading. Only the dummy measurements of potential for head, chest and leg injuries accurately reflect the dangers to auto occupants in a collision, says Clarence Ditlow, executive director of the Center for Auto Safety.

The disagreement emerged from a furor over the use of a government film in a lobbying campaign against higher corporate average fuel economy standards.

The film shows a head-on collision between a 3,860-pound Ford Crown Victoria and a 1,920-pound Subaru Justy. The Justy showed severe damage; the Crown Victoria was mildly disfigured.

But data from the dummies inside those cars indicate that even though the Justy did not contain an air bag, an occupant would probably have survived the crash. Head-injury readings were below the level where death is possible, according to calculations by the National Highway Traffic Safety Administration, while chest injuries slightly exceeded the threshhold for possible serious injury or death. Crown Victoria readings were well below the threshhold.

"To my mind, the visual is a better depiction of the overall effect (of a crash) than just looking at the test scores," said George Parker, head of NHTSA research.

NHTSA, which produced the film, runs the New Car Assessment Program that reports test scores from dummies in 35 mph laboratory crashes of new cars.

But Ditlow says, "You should believe the numbers, not your eyes. All crashes appear violent. What one has to look at is whether the occupant survives, not how much damage there is to the car. Film is deceptive."

The film was used by the industry-backed Coalition for Vehicle Choice in an ad opposing stiff new CAFE standards. In its ads, the coalition contends that increased fuel economy, such as the 40 percent gain by 2001 proposed by Sen. Richard Bryan, D-Nev., will require automakers to produce smaller and less safe cars.

Another crash test, this one conducted earlier this year by the Insurance Institute for Highway Safety in Arlington, Va., may provide a better picture of what collisions between big cars and small cars will look like in the future.

The test involved a head-on collision between a 3,580-pound Buick Park Avenue and a 2,282-pound Geo Storm. Both contained air bags, which are expected to be nearly universal in U.S. cars produced by the 1996 model year, the earliest that proposed new fuel economy standards would take effect.

In the Insurance Institute test, measurements of the dummy in the Geo Storm were well within acceptable test limits for head, chest and leg injuries.

Dummy measurements in the Buick Park Avenue were also within the threshold for both head and chest injuries. But the Park Avenue exceeded the standard for leg injuries, indicating that serious injury was possible.

Chuck Hurley, Insurance Institute researcher, warns, "Dummy values don't measure all the violence of a crash. Their simplistic use is not good science."

Hurley said film of the crash showed that the head of the dummy in the Storm went out the open side window, then back in, without hitting anything.

"You have to look at the cars as well as the numbers,' said Hurley, whose group has sided with NHTSA in arguing that a higher CAFE will lead to smaller cars and more highway deaths.

Curry blasted by Ditlow, Claybrook

The debate over the validity and use of the National Highway Traffic Safety Administration crash-test film reached a political flashpoint last week.

Consumer advocates Clarence Ditlow of the Center for Auto Safety and Joan Claybrook of Public Citizen accused NHTSA Administrator Jerry Curry of misusing the powers of his office.

Claybrook and Ditlow, citing documents obtained under government sunshine laws, claimed that Curry ordered NHTSA contractors to crash test the two cars specifically to produce dramatic film at a cost of $200,000 to taxpayers. Curry then distributed hundreds of copies of the film, including one copy to the Coalition for Vehicle Choice, according to Claybrook and Ditlow. The industry-backed coalition used the film in an ad opposing stiff new corporate average fuel economy standards.

Curry, who has argued that mandates for stiff fuel economy will result in smaller cars and more traffic fatalities, admitted ordering the crash test. "That's my job," he said.

He also admitted distributing hundreds of copies of the film. But he denied any collusion with the coalition to aid in its campaign against higher fuel economy standards.

— Max Gates

ELECTRIC

New rules for new cars

continued from PAGE 1

top secret, but sources at GM indicate that the company hopes to start very limited production during the 1993 calendar year. But even if the car and plant were ready now, certifying that the car meets NHTSA safety regulations would be problematic.

The NHTSA regulations need attention because there are concerns about electric vehicles that are not addressed in today's requirements — among them high voltage, electrical braking systems, battery safety and information displays.

There also are some present requirements that make no sense for electric vehicles.

"Sometimes, the words we put in there deal with hydraulics or mechanical linkages, and when you get an electric vehicle, they just don't make sense," said Barry Felrice, NHTSA's associate administrator for rulemaking.

"The accelerator control may be one item. A safety standard requires that when you take your foot off the gas, the throttle has to go back to neutral, which is idling speed, and within a specified period of time. If everything is electrical in a car, I'm not sure what a throttle is."

RULEMAKING BEGINS

Felrice said the agency is putting together an Advance Notice of Proposed Rule Making that will deal with the safety of electric vehicles. He said the notice will be issued by the end of this year. Companies and groups then will have two months to comment before NHTSA issues a Notice of Advanced Rule Making. There's also two months of public comment at that stage.

Felrice said the advance notice will ask questions on two basic issues:

- Are there any specific safety regulations that need to be amended so as not to impede the introduction of electric vehicles?
- Should there be additional standards that apply solely to electric vehicles?

"We're not talking about doing away with safety standards or exempting these vehicles, but . . . some of our standards may not make sense," Felrice said. "Fuel system integrity is a good one. That deals with leakage of liquid fuel, and a pure electric vehicle isn't going to have any liquid fuel. What do we do in areas like that?"

As for new regulations, NHTSA will ask whether new requirements are necessary to cover areas such as battery safety, battery leakage, the integrity of the battery compartment and recharging.

"We could have a Notice of Proposed Rule Making probably by summer or early fall of 1992 and then a final rule probably in the spring of 1993," Felrice said. "It all depends on the comments we get back, how much work we have to do."

Some rules could take effect immediately, but new requirements probably wouldn't take effect for a year and a half after the final rule is issued, Felrice said.

"We really need to hear from the industry what their problems are," Felrice said. "They're developing these vehicles, and they know what difficulties they're having; we don't — we can only hypothesize."

The agency can handle some concerns by merely issuing a legal interpretation for an existing rule. NHTSA requires fuel gauges, for example, but electric vehicles carry no fuel. NHTSA could issue an interpretation that says a fuel gauge could be an indicator of electrical charge remaining.

"We did a report to Congress a year and a half ago, and we really didn't identify too many standards that might need to be changed for electric vehicles," Felrice said. "One (that may need changing) was our defrosting/defogging standard, which can pose a problem for electric vehicles because you need a lot of power to clear the windshields."

Also, NHTSA braking standards refer to hydraulics, and electric vehicles wouldn't have hydraulic brakes.

HELP FROM UL, SAE

Manufacturers are looking for help from voluntary organizations such as the SAE and Underwriters Laboratories in developing safe electric vehicles.

"Some manufacturers said they were talking with UL," Felrice said. "They would have UL make sure the electrical system was not in contact with the outer part of the body at all so you don't get shocks in crashes, or so emergency medical people would not be electrocuted if they have to cut through the vehicle to release somebody."

Felrice said the manufacturers would just as soon not have new NHTSA regulations, which would suit the agency fine.

"Our philosophy, and there's a presidential executive order addressing this, is we should adopt or rely on voluntary standards organizations before we issue federal regulations," Felrice said.

But NHTSA has no intention of exempting electric vehicles from crashworthiness standards or from having air bags, automatic belts or side-impact protection.

"There's absolutely no reason why you can't build an electric vehicle that's just as safe as a liquid-fuel vehicle," Felrice said. "If it's something that's impossible to meet, then we might exempt an electric vehicle."

SERVICE TRAINING

Preparing dealers to service electric vehicles is as important as development and certification concerns, said Jim Kelly, service readiness manager for GM's electric vehicles group.

Dealerships that sell electric vehicles probably will have to devote one or two service bays solely to them, depending on sales volume. Each bay will require a special electric twin-post above-ground hoist to allow technicians free access to the entire underside of the car, Kelly said.

That's because the 850-pound battery pack for the GM electric car runs the length of the vehicle, and technicians would have to be able to remove and replace it.

Some dealerships already may have such hoists, but some of those may not be adequate because they can't raise the car high enough, Kelly said.

The service bays also will need lifting tables to raise and lower the battery pack itself and some type of transporter to move the heavy battery pack around.

"We're looking at whether there is any equipment out there today that could handle this type of service," Kelly said. "We have not really found anything. It may require that something be developed."

Dealerships also would need a station to recharge the whole battery pack, which consists of 32 10-volt batteries, in just over an hour, Kelly said. That would require a 220-volt outlet. While most dealerships have 220 lines, they usually don't have 220 outlets.

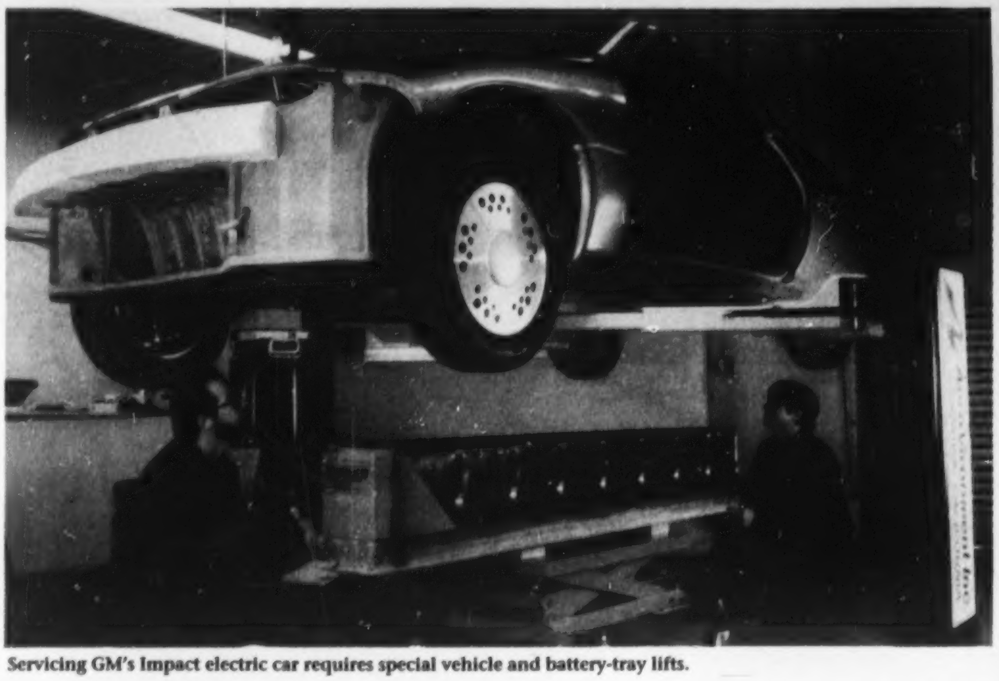
New electric vehicle software for diagnostic machines will require thousands of hours for development, Kelly said. He added that technician training will be another massive job.

"The training will be very extensive and has to be given to all our dealer technicians," Kelly said.

No small part of the training will be proper handling of high-voltage electrical systems. The battery pack will be capable of jolting a technician with a fatal dose of more than 300 volts of electricity, compared with a maximum of 15 volts from a current battery.

Dealers will have to make the service department changes, but once the electric vehicle is sold, there will be little or no scheduled maintenance — no oil changes, tuneups or filter or muffler replacement.

But if anything goes wrong with the car, the dealership will be the place to go because no aftermarket shop will be equipped to do the work, Kelly said.



Servicing GM's Impact electric car requires special vehicle and battery-tray lifts.

Increase your SALES by over 400%

This tax season turn your customers tax return into a down payment overnight! Through Tax Refund Express, you can provide your customer with a cash down payment immediately and make the sale on the spot instead of hearing "I'll be back when I get my tax refund".

Join our rapidly growing network of over 400 dealers and place your business far ahead of your competition! Last year our dealers reported:

$ Record increases in sales
$ Higher gross profits
$ Increased floor traffic
$ Dramatic increases in bottom line

Here is what two dealers had to say about Tax Refund Express:

"We sold an additional 180 cars last tax season through Tax Refund Express."
Robert Giles, President, Giles Nissan/Volvo.

"Tax Refund Express was definitely a successful program for us."
Brad Sather, V. P., General Manager, Gateway Chevrolet.

Best of all, we make it as easy as 1-2-3. Don't delay - **Call today for a free video presentation.** This tax season, you'll be glad you did!

Mexico sales rise 8% in August

MEXICO CITY — Mexico's auto market showed gains in August, but the sales pace slowed from earlier in the year.

Chrysler — led by strong boosts in its Shadow, Spirit and truck models — more than doubled its volume for the month. Its 5,234 additional sales in August were more than the entire industry gained.

The latest figures from the Mexican Automotive Industry Association show that overall sales of cars and trucks in Mexico rose 8.04 percent in August to 50,166. That brought total sales for the year to 424,431 units, a 21.8 percent increase from 1990 levels.

Industry leader Volkswagen was off for the month. So were its two closest followers, Nissan and Ford.

The sales figures include a small but growing number of imported models that have arrived since a ban on imports was lifted last year. A total of 594 imported models were sold in August, lifting the total for the year to 6,436 — about 1.5 percent of the total market.

Through August, General Motors' Silhouette minivan was the best-selling import, with 1,470 sales. Two other minivans, Chrysler's Voyager (508) and Ford's Aerostar (562), are also on the market.

The Lincoln Town Car (915), Nissan's Maxima (801) and GM's Corvette (796) have been the best-selling imported cars.

Each of the Big Five sells cars and trucks. Other truck makers include Kenworth, Mercedes-Benz and Dina Camiones.

Clean air rules renew interest in natural gas

Race is on to bring vehicles to market

JACK KEEBLER
Engineering Editor

Natural gas was the Rodney Dangerfield of alternative motor fuels. It just couldn't get any respect.

But the 1990 Clean Air Act requires clean-fuels fleets in 22 highly polluted urban areas in the 1998 model year.

The result is a multimillion-dollar engineering race among makers — particularly those with lots of fleet business — who hope to be the first to market a new generation of vehicles powered by natural gas.

The long-range carrot, according to projections by the American Gas Association, is the roughly 4 million natural gas vehicles that will be purchased by 2005 in response to the Clean Air Act's provisions. But there is also a short-range carrot. That is the million-dollar funding by natural gas consortia that is creating natural gas demonstration fleets.

In addition, last year's Persian Gulf crisis emphasized the fragile nature of the petroleum supply — and the high cost of keeping foreign oil flowing. Natural gas is also about 30 percent cheaper than gasoline.

But most Asian and European makers say they are cool toward the fuel because their smaller sedans will not accommodate fuel storage tanks that are large enough to give their cars a practical range. And several foreign makers also mention customer fears associated with refueling as a reason for little development activity on compressed natural gas vehicles.

"It really scares people to refuel them," said a Volvo Cars of North America spokesman. "They have relatively poor range. And the weight of the tanks is substantial. In an era in which we're all trying to reduce weight, that's not a particularly attractive characteristic."

The 1990 Clean Air Act requires that fleets of 10 or more vehicles must be able to run on clean alternative fuels if the vehicles are refueled at a central location and if they are located in one of 22 urban areas that have not have met ozone requirements.

Fleet operators are required to start purchasing those vehicles in the 1998 model year, when they replace their older vehicles. The only exclusions are emergency, rental, demo, off-road and privately garaged vehicles.

GM TAKES AN EARLY LEAD

General Motors — and specifically GMC Truck Division — appears to be the farthest ahead on production-line-built natural gas vehicles.

In July, GMC Truck announced that it had a contract for 1,000 of the vehicles from a consortium of natural gas utilities in Texas, Colorado and California. Production of compressed natural gas powered GMC C2500 pickups with 5.7-liter V-8 engines is scheduled to begin April 1, 1993, a GMC spokeswoman said.

Before that date, GMC vehicles will be shipped to PAS Inc., a Troy, Mich., engineering firm, for installation of the CNG storage tanks and fuel system.

At the Los Angeles briefing announcing the GMC effort, representatives of California's three major gas utilities said the demonstration fleet is funded by a $935,000 engineering and manufacturing grant. The three-phase grant will cover initial design, engineering of the natural gas fuel system, engine development and emission testing.

GMC plans to build as many as 3,000 of the dedicated natural gas vehicles in the 1992 model year. The conversions will meet all the federal safety standards required of gasoline-powered vehicles. And unlike regular conversions performed by outside companies, the GMC trucks converted by PAS Inc. and later factory-built natural gas trucks will be warranted by GM and serviced by GMC dealerships.

In a separate $40 million consortium program announced last February, General Motors' Truck & Bus Group and the Gas Research Institute agreed to begin engineering and product development of GM light-duty and medium-duty trucks with 5.7-, 7.0- and 7.4-liter V-8 engines powered by compressed natural gas.

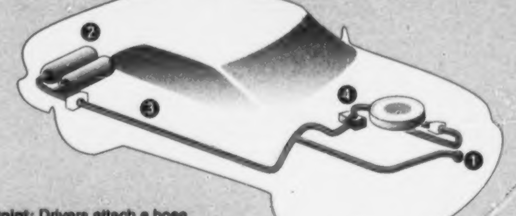
FORD HAS BIG PLANS

Ford Motor Co. also has big plans for compressed natural gas vehicles. Chairman Harold A. Poling told the company's stockholders at the annual meeting last May that by "mid-1992, we'll have a 100-unit test fleet of CNG pickup trucks for customer evaluation." The next step in the Ford pilot process "toward a production vehicle" is the production of an additional 200 to 600 trucks by late 1993.

According to Roberta Nichols, Ford's manager of electric vehicles and external associations, up to half of the 100 Ford pickups

see CNG, 18

Dedicated CNG car



1. **Fill-Point:** Drivers attach a hose that refuels natural gas cylinders in minutes.
2. **Cylinders:** Natural gas is stored in cylinders so strong that they actually add to a vehicle's structural strength.
3. **Tubing:** Stainless steel tubing transports the natural gas from the cylinders to the engine.
4. **Regulator:** Before natural gas enters the engine, a regulator reduces the fuel to about atmospheric pressure.

Greg Pokriefka, senior project engineer for ANR Pipeline Co. in Detroit, refuels a compressed natural gas-fueled car. The fill-point for CNG-powered vehicles is usually located underneath the hood.

Association touts natural gas as cheap, plentiful, patriotic

Buy American. That's what the backers of compressed-natural-gas vehicles want the industry to do.

Compressed natural gas is a domestic resource, and the United States has plenty of it. Officials of the natural-gas industry claim there is a 50- to 60-year supply at current consumption rates just by tapping conventional resources.

And the price is right, gas officials say. The cost per mile driven is about 60 percent of the cost of unleaded regular gasoline.

A good domestic supply, a reasonable price and significant emissions benefits are just three strong reasons why vehicle makers are spending time and money sorting out the advantages and disadvantages of natural-gas-powered vehicles.

The Persian Gulf crisis helped to underscore the fragile nature of the foreign petroleum supply. Natural gas, by contrast, is in greater supply than oil in the United States.

But what happens if large numbers of natural-gas vehicles are produced? Would increased consumption by motor vehicles quickly chip away at the reserve?

"In our most optimistic projections, we see about 3 million natural-gas vehicles on the road by the turn of the century," said Julie Stewart, an American Gas Association spokeswoman.

"As for the reserve, 8 million to 10 million vehicles would consume about 1 trillion consumption is about 19 trillion cubic feet per year. So 10 million vehicles would increase consumption by 5.3 percent."

Compared to established fuels such as gasoline and diesel, natural gas is about 30 to 40 percent cheaper per mile traveled. Aftermarket costs for converting gasoline vehicles to compressed natural gas run from about $2,500 to $4,000, depending on the sophistication of the conversion and the size of the storage tanks.

Natural gas also may offer large emissions benefits with simpler fuel systems and essentially no emissions-producing refining process.

Jeff Alson, assistant to the director of the Emission Control Technology Division of the EPA, thinks highly of compressed-natural-gas vehicles for several reasons.

"CNG is a very clean fuel," he said. "Roughly 85 to 95 percent of the hydrocarbon emissions from these vehicles is low-reactivity methane. Methane is a fairly potent global-warming gas. But from an ozone-production standpoint, it is near zero photochemically."

Alson said natural-gas vehicles have two other important advantages from an emissions perspective.

First, even when the emissions-control system fails, the exhaust emissions are still fairly environmentally benign.

And there are no evaporative emissions from their sealed high-pressure fuel tanks. natural gas produce the fewest reactive compounds of any of the current alternative fuels.

In addition, compressed natural gas has a high octane rating of about 130, compared to about 94 for the highest-octane gasoline. That means compression ratios as high as 15 to 1, which allow higher operating efficiency.

Natural gas is safe in a properly engineered vehicle. According to the Gas Research Institute, there have been no fatalities, burn accidents or other serious injuries associated with compressed natural gas in 430 million miles of natural-gas-vehicle operation.

And importantly, a supply infrastructure is already in place. About 1.2 million miles of underground supply lines criss-cross the United States. But there are few filling stations. The installation cost of a natural-gas filling pump is high. Industry experts estimate the cost at $250,000. (An M85 methanol pump costs about $25,000 to $30,000.)

Natural gas is being sold at a limited number of Amoco, Shell and Unocal stations.

Long-range, natural-gas companies say that private homes might be fitted with natural-gas compressors for filling the family vehicle. The units would cost $2,500 to $3,000 plus an installation cost of $800 to $1,500. Users might be able to pay for the compressor on an installment plan as part of their monthly gas bill.

About 1,000 of those home units have been with the equivalent of 10 gallons of gasoline takes about five hours. Fast-fill public pumps, which operate at higher pressures, reduce that to about five minutes.

On the negative side, emissions of hydrocarbons (mostly unburned methane) are relatively high. The vehicles will probably need a different type of catalyst to meet future regulations for hydrocarbon and oxides of nitrogen emissions.

But perhaps the biggest stumbling block is fuel storage. To carry sufficient amounts of the gas for reasonable range, vehicles must be fitted with large, heavy pressurized tanks (about 124 cubic feet of natural gas equals one gallon of gasoline in energy content.)

That limits current natural gas vehicles to extra-large sedans and trucks.

Adding to the range problem is the lack of an extensive public refueling station network. There are only 325 to 350 public refill stations in the United States.

Opponents say consumers would be nervous about handling high-pressure fuel lines and driving with storage pressures of 3,600 pounds per square inch in the fuel tank. Of course, most makers say their tanks are capable of withstanding up to four times normal storage pressures.

And finally, dual-fuel vehicles suffer a 10 to 15 percent loss in power. Because the fuel enters the combustion chamber as a gas, it partially displaces the incoming air charge. That reduces the amount of oxygen available

Transfusions could quickly recharge batteries

EDWARD LAPHAM
Managing Editor

TOKYO — Electrolyte transfusions may be the quick-charge answer for electric vehicles powered by lead-acid batteries, according to a backer of the Los Angeles Electric Vehicle Initiative.

John Samuel, director of Clean Air Transport AB, the Swedish company that plans to sell electric vehicles in Los Angeles in 1993, said his company has examined other battery types and can use them when they are completely developed but the lead-acid variety remains the most cost-effective, despite quick-charge limitations that restrict use.

"A series of service stations that can quickly exchange battery electrolyte might be the most feasible way to do quick charges without increasing the cost of the vehicle," Samuel said.

Samuel and a prototype of the LA301 — along with several Los Angeles officials — were at the International Automotive Design stand at the Tokyo Motor Show. IAD built the four-door prototype at its studio near Worthing, England.

Clean Air Transport, which won a competition to supply vehicles to Los Angeles, and officials of the Los Angeles Department of Water and Power will show the car in Los Angeles for the first time Thursday.

The LA301 is a hybrid unit that includes a 45-horsepower DC motor plus a fuel-injected, four-cylinder internal combustion engine that burns reformulated gasoline with a pre-heated catalytic converter.

Clean Air Transport said the vehicle can travel 60 miles in the all-electric mode, and the auxiliary engine extends the range to 150 miles.

The engine kicks in if the lead-acid batteries are more than half discharged or if the vehicle speed is more than 30 mph.

Samuel said the vehicle will go on sale in the United States in 1993, although the company has yet to settle on a retail distribution system. The projected retail price will be $25,000 in 1991 dollars, he said.

Samuel's experience with hybrid electric vehicles dates back to the late 1970s when he was president of Electric Auto Corp. in Troy, Mich., which used research and development partnership funds to develop the Silver Volt.

The Silver Volt, based on the Chevrolet Malibu A-body wagon, was to have been produced in a factory in the Bahamas and sold primarily in Florida and Southern California.

Electric Auto Corp. and the Silver Volt project folded in 1982. ■

The LA301 prototype is powered by a DC motor and four-cylinder engine.

Plentiful fuel gets new respect

continued from PAGE 16

will be placed with California gas utilities. They include Pacific Gas and Electric, Southern California Gas and San Diego Gas and Electric. The rest will go to other customers in the United States and Canada.

Nichols said the pickup trucks have been modified with an increase in compression ratio to take advantage of the fuel's higher octane. But there has been some power loss because of a loss in volumetric efficiency.

But the real challenge, according to Nichols, is oxides of nitrogen emissions. One of the engine's advantages is low carbon monoxide emissions.

"The present NOx reduction catalyst needs some CO to do its job," said Nichols. "So we're going to need a new catalyst. And the engine control module will also have to be re-programmed." She said engineers are "shooting for a minimum range of 200 miles in combined city and highway driving."

Nichols said that another important reason for renewed interest in natural gas is the change in the industry itself.

Until the last few years, gas suppliers were a loosely organized group consisting of the pipeline companies, producers and supply utilities. Today, essentially united under the American Gas Association and Natural Gas Vehicles Coalition banners, the industry is better coordinating its efforts — and funding — so it can be heard in company boardrooms and government hearings.

For example, last month the 1991 Natural Gas Vehicles Conference and exhibit brought together a number of interested parties, including elected officials and representatives of the Bush administration, automotive industry, natural gas vehicle equipment manufacturers and gas industry.

Chrysler Corp. plans to produce 50 full-sized Dodge B-vans by March 1992 that will go into service in a test project sponsored by the U.S. Department of Energy and the General Services Administration. The value of the contract is $885,900.

In announcing the Chrysler contract, Energy Secretary James D. Watkins said, "Compressed natural gas and other alternative fuels are a key ingredient in our National Energy Strategy for reducing our dependence on unreliable sources of foreign oil."

By late 1992 or 1993, about 2,000 of the Dodge vans will be built at a shop near the plant in Windsor, Ontario. And by 1994, the plan is to build production CNG vehicles on line.

JAPANESE TIGHT-LIPPED

Most Japanese vehicle makers are quiet about their work on natural gas. Requests for information from Japan by the public relations departments of several large U.S. importers were unanswered.

Toyota Motor Corp.'s natural gas research began in 1984. The company claims its research is addressing the relatively high emissions of methane and reductions in the weight of the pressurized storage tanks.

Nissan Motor Co. Ltd. is funding a five-year alternative-fuels research project at the University of Toronto. According to Nissan, the "prime target" of the $250,000 program is the refinement of natural-gas-powered engines and their fuel systems. The agreement is between Nissan Canada Inc. and the University of Toronto.

Isuzu Motors Ltd. released information last November on a joint development effort with Tokyo Gas Co. The program produced a two-ton-payload Elf truck powered by a converted 3.6-liter diesel engine fueled with liquid natural gas.

Isuzu reports one-seventh the emissions of carbon monoxide and one-twentieth the emissions of nitrogen oxides produced by a diesel engine. Hydrocarbon mass amounts were the same as a diesel engine, but were of less reactive types that produce little ozone.

Industries that use light trucks for delivery services are already experimenting with the fuel.

A Federal Express test fleet has been set up under the auspices of the California South Coast Air Quality Management District. In September 1989, United Parcel in New York converted 10 delivery vans to natural gas and is operating those vehicles in Brooklyn. And last April the company announced a two-year test project in Washington involving three of its vans. ■

Most dealers opt to service Peugeot

JIM HENRY
Staff Reporter

NEW YORK — Peugeot dealers had until last Friday to decide whether to drop the franchise entirely and get nothing or to accept a one-time payment from Peugeot Motors of America to stay on and sell parts and provide service.

Peugeot announced in August that it had stopped importing new cars to the United States.

The company is offering dealers $1,000 for each car sold between Jan. 1 and Sept. 30 of this year if they continue to handle parts and service for three years.

Peugeot spokeswoman Kim Derderian said that by the middle of last week, 106 of Peugeot's 151 U.S. dealers had accepted the company's offer.

Peugeot sales through September were 3,263, an average of about 22 cars per dealer. That would be an average settlement of $22,000 per dealer.

Peugeot dealers remain unhappy with the decision to halt imports but are "fairly comfortable" with the settlement offer, said Gary Reynolds, chairman of Peugeot's dealer council and owner of Reynolds' Garage and Marine Inc., which is located in Lyme, Conn.

Reynolds, one of Peugeot's 32 exclusive dealers, said he will accept the offer but is also trying to acquire another new-car franchise.

Besides agreeing to stay on to sell parts and provide service, dealers who accept the offer also have to release Peugeot and its parent companies from any legal liability, Derderian said.

Eric Chase, a Roseland, N.J., attorney who represents many dealers, said he didn't know of any Peugeot dealers who had sued the company.

"For many dealers with other franchises or who only sold one or two Peugeots a month, this is probably not a big deal at all.

"For some people," Chase continued, "they're losing their livelihood," he said.

Derderian said Peugeot will offer rebates on parts purchases starting in 1992.

Infiniti satellite link aimed at training

ATLANTA — Infiniti dealers now can receive company news updates, sales training and service training through a private satellite network that includes one-way video capabilities.

The $3 million VSAT network links more than 90 U.S. sites including all Infiniti dealerships, regional offices, Nissan regional offices and Nissan Motor Corp. in U.S.A.

"Using video we can expand our sales and service training programs," said William R. Bruce, Infiniti general manager.

Auto trade picture brightens

LINDSAY CHAPPELL
Staff Reporter

The balance of automotive trade between the United States and the rest of the world showed frail signs of improvement at the end of the second quarter.

Key factors in the shift are steep declines in imports from Germany and other European countries, additional displacement of Japanese imports by U.S. transplant factories and a modest increase in U.S. truck exports.

The value of cars and trucks imported from Japan was $339 million less in the second quarter than it was a year earlier.

At the same time, Japanese-owned assembly plants in the United States produced an additional 59,000 vehicles.

Although the overall effect on the trade deficit is small, the change comes at a time when U.S. automakers continue to express frustration with Japanese importers and renewed hopes for U.S. exports.

According to government trade data, which lags several months behind current activity, the United States imported $12.58 billion in cars and trucks from foreign factories during the three months ended June 30.

That contributed to a $1.16 billion improvement in the nation's automotive balance of trade. During the second quarter of 1990, importers brought in $13.64 billion worth of vehicles.

But the U.S. automotive trade deficit was still running at an annual rate of $41.4 billion a year — $1 billion higher than in 1990.

Exports of U.S.-made vehicles rose $96 million for the three-month period, to $3.48 billion. Truck exports rose $206 million. Car exports declined about $110 million.

The glimmers of good news brightened an otherwise gloomy report. While imports from every major auto-producing nation except Mexico were down, so were U.S. exports to key markets including Canada and Japan.

The figures appear to reflect a sluggish car market in and out of the United States as much as any competitive positioning by U.S. producers.

Imports from Germany, Sweden, France and the United Kingdom plunged significantly in the second-quarter, reflecting the sinking fortunes of Europeans in the U.S. market.

But imports from Mexico rose 13.7 percent over the second quarter of 1990. For the 12 months ended June 30, Mexican factories nearly doubled their year-earlier shipments.

A key factor has been Ford Motor Co.'s production increase at its Hermosillo plant, which builds Ford Escort/Mercury Tracer.

Japanese could take 30% of U.K. market, study says

VAUGHAN FREEMAN
Special Correspondent

LONDON — Japanese automakers will capture 30 percent of the British market before the end of the 1990s, up from a voluntary 11 percent ceiling now, according to a study issued last week.

The report, issued by the securities firm of Albert E. Sharp Ltd., makes the gloomiest reading yet for Ford of Britain, General Motors/Vauxhall and Britain's own Rover Group.

Just 10 days ago, Ford warned trade union leaders that the automaker expected Japanese manufacturers to hold a 28 percent share by 1999.

According to the Sharp forecast, Japanese producers are on the threshhold of breaking into the all-important company car market. That market accounted for half the 2 million new cars sold last year in Great Britain.

Sharp says Nissan and Toyota will both be looking for 10 percent shares in the British market, while Honda also will become a major player.

"The real concern has to be for those manufacturers with considerably lower market shares who simply could not afford to give up several percentage points," said Del Barrett, who is the author of the report.

Nissan, Honda and Toyota plants in Britain could be producing as many as 600,000 cars a year between them by 1995, or more than 50 percent of present domestic output, Barrett added.

Ford Europe opens recycling test plant

FRANKFURT — Ford of Europe began operating a $54,000 pilot plant last month inside its Cologne, Germany, factory to develop technology for dismantling cars and removing recyclable components and fluids from vehicles.

Ford said lessons learned at the plant may lead to design changes in current and future models that would make it easier to recycle parts. The techniques developed also will be described in a manual for eventual use by the scrap industry. But Ford has no plans to open a recycling factory in Europe or in the United States.

This month Ford also began collecting scrap plastic vehicle parts from dealers in the Cologne area. The parts will be consolidated at the plant, sorted and passed to suppliers who will study their recyclability.

WRITE-OFF

Big 3 must erase billions

continued from PAGE 1

the future. Besides health care, those benefits also include life insurance and legal assistance.

Initially, the change covers only U.S. employees and retirees. It will extend to foreign employees and retirees after 1995, according to a benefits consultant.

Automakers and other public corporations will have to decide whether to account for the billions in new liabilities at one time, or to spread the accounting change over as much as 20 years.

"We are looking at the alternates and trying to decide the best way to handle it," Stempel said. "We hope that the analysts understand it."

In addition to the big switch-over charge, the companies' reported earnings will be depressed in future years as retirement liability grows. Companies will have to expense millions of dollars annually in a non-cash "interest expense" on the liability.

The change will be reflected only in public financial statements. It makes no difference in the companies' income as reported to the Internal Revenue Service.

Ford Chairman Harold Poling says his company is weighing taking a big hit now versus amortizing the cost over years. Either way, Poling says rising health care costs and the new rule from the Financial Accounting Standards Board will hurt Ford's financial position.

"It's a very serious problem for the competitiveness of the auto industry in this country," Poling said.

Health care makes up the great bulk of retiree benefits. For years, automakers have been trying to negotiate reductions in health-care costs.

"We need some form of cap on the expenditures," Poling says.

Companies are likely to take a long hard look at reducing retiree health care costs.

John Beauchamp, practice director at The Wyatt Co., a benefits consulting firm, says almost every company is looking for ways to decrease employer contributions to retiree health plans. "It's going to be tough for future retiree programs," Beauchamp said.

The new accounting rule is FASB No. 106, issued in December 1990. Public companies will have to use it for any fiscal year beginning after Jan. 1, 1993. It falls most heavily on companies, such as the domestic automakers, that have large work forces and large bodies of retirees.

> “It's tough, after all these years of accounting for it on a pay-as-you-go basis, to make the change.”
>
> **ROBERT STEMPEL**
> GENERAL MOTORS

Because of the rule, International Business Machines Corp. last spring took a $2.3 billion charge and reported its first quarterly loss.

Here's how the change is being handled at each of the Big 3:

GENERAL MOTORS

GM has said that it does not plan to adopt Rule No. 106 earlier than required. The company has not decided whether to take the big hit or spread it over a number of years.

GM's new one-time liability could easily exceed $10 billion. Stockholders' equity as of Sept. 30 was $28 billion.

In 1990, GM paid $1.2 billion for non-pension benefits for about 345,000 retirees, roughly $3,496 per person.

"In addition to all those other exciting things we are dealing with, like a recession and trying to get things back on track, we've got that great little Rule 106," Stempel said, dripping sarcasm.

He said GM will probably make a provision for the new accounting standard when it releases calendar-year earnings.

Even though GM won't have to set aside any cash, Stempel is concerned about how the numbers will be perceived.

"My concern is when you show big numbers in your balance sheet, and you account for them, people start to raise questions about them, as they should," Stempel said. "It's tough, after all these years of accounting for it on a pay-as-you-go basis, to make the change."

Analyst Philip K. Fricke of Prudential Securities Inc. said he wouldn't dare venture a guess about GM's potential liability: "They have an army of actuaries working on that, and they don't know yet," Fricke said.

Early signs show hope that investors and analysts understand, Stempel said. Companies that have already announced the impact of the new rule on their balance sheets have seen "nary a ripple" from investors.

FORD

Ford estimates its initial liability at between $5 billion and $9 billion.

In addition, Ford estimates that it will have to expense between $200 million and $1 billion a year in new liabilities. Most of that is for the equivalent of interest that would accrue if the retirement benefit money had been actually put into a fund.

Ford's post-retirement health-care costs rose from $386 million in 1988 to $416 million in 1989 to $460 million last year — a hike of 19 percent in two years.

Ford Chairman Poling says the company is weighing the pros and cons of a big hit versus amortizing the cost over years. Either way, Poling says rising health care costs and the new FASB rules will hurt the company's financial position.

Health-care costs are "a very serious problem for the competitiveness of the auto industry in this country," Poling said.

Gary Brantz, a health care actuary with the management firm Towers Perrin, says the new rule will have "a dramatic impact to earnings, but it may be a healthy exercise because it will force companies to address the health care issue."

Said Poling: "We need a cap on the expenditures."

The company is negotiating with the UAW for a spending cap for hourly retirees and has taken steps to limit some of its liability on the salaried side. Where Ford used to pick up the entire 20 percent co-payment for its Medicare-eligible salaried retirees, said an executive at Blue Cross Blue Shield of Michigan, it recently instructed the plan to pay only the 10 percent Ford is obliged to pay.

CHRYSLER

Chrysler has not decided whether to take a one-time hit or amortize the liability over several years.

Chrysler's preliminary estimates of its one-time liability range from $4 billion to $6 billion, according to the company's third-quarter financial statement.

"The low estimate assumes Chrysler can negotiate various changes in its benefit levels," the company said in its financial statement. "The high estimate assumes no changes are achieved, which Chrysler believes is unlikely."

Chrysler continues to seek ways to reduce the rising costs of medical expenses and insurance plans.

Big book change

A new accounting rule forces corporations to account for a huge liability for future retirement benefits.

GM:

- **415,000 U.S. employees***
- **345,000 U.S retirees & surviving spouses***
- **Estimated liability: over $10 billion**

FORD:

- **150,000 U.S. employees**
- **118,400 U.S. retirees & surviving spouses**
- **Estimated liability: $5 billion to $9 billion**

CHRYSLER:

- **90,000 employees worldwide**
- **68,000 retirees, not including spouses**
- **Estimated liability: $4 billion to $6 billion**

** Not including Electronic Data Systems Corp. and GM Hughes Electronics Corp.*

CLEAN AIR

Northeast may join 'California club'

continued from PAGE 1

"It adds another dimension to what we're doing. And, to be honest, we don't need another dimension right now," he said.

Also true to form, environmentalists were unsympathetic.

"This is an industry with a record of being able to meet tough standards," said Bill Becker, the Washington-based executive director of two interested groups, the State and Territorial Air Pollution Program Administrators and the Association of Local Air Pollution Control Officials.

"I don't know whether this is intentional, but they typically lay out the worse-case scenario before the fact and then are able to do what was asked cheaper and faster than they ever thought," Becker said.

"It really bugs me when they say that the Northeast doesn't have California's air pollution problems so they don't need California's standards. Some areas do have serious pollution problems, and other areas want to make sure they never do," he said.

Becker said the agreement signed last week could speed up the legal process for the states interested in adopting the California rules.

A 1977 provision added to the federal Clean Air Act allows other states to adopt the California standards instead of the less rigorous federal rules, provided they adopt the entire California program. Other states are not allowed to set unique standards.

States that fail to meet federal air pollution standards are under pressure from the government to demonstrate that they're doing something to clean up their air, and adoption of the California standards is seen as a simple solution to a complicated problem.

In some states, the legislature must act to adopt the California standards. Others have authorized a rulemaking body like a state department of environmental protection to act on its own.

Other states are debating the matter of who has the power to adopt California rules.

The New Jersey Division of Environmental Quality, for example, is exploring that legal issue, said spokesman George Klenk. New Jersey has scheduled a public hearing in Trenton on Thursday on a host of environmental proposals, including a draft of California-style standards.

Spokesmen for Ford Motor Co. and General Motors last week reiterated the industry stance that the California rules were devised for air pollution problems unique to California, and that the cost of exporting California rules to other states will outweigh the benefits. And there are easier ways to clean the air, they said, like getting heavy-polluting, pre-1975 cars off the road.

They disputed the states' claim that the emissions from gasoline-powered cars could be cleaned up for less than $200 per car. They put the price at more than $1,000 per car.

"The consumer is the guy that's going to get hurt, and the automobile industry is going to get hurt, and the infrastructure it's going to take to run this show is going to be huge," said John V. Dinan Jr., spokesman for GM's environmental activities staff.

Besides requirements for "low-emission," and "ultra-low-emission" vehicles, the California rules say that by 1998, at least 2 percent of a company's sales of cars and light trucks under 3,750 pounds have to be "zero-emission" vehicles. The figure would rise to 10 percent by 2003.

At the present state of the art, "zero-emission" means electric vehicles. If all the states in question adopted the California rules, automakers would have to sell — not just build — about 110,100 electric vehicles in 1998, compared to about 34,500 for California alone. The U.S. total would jump to 550,500 by 2003. The figures are based on annual sales of 15 million cars and light trucks. The rules call for financial penalties if the right model mix isn't reached.

"We'll never meet those standards, if we have to do it based on the mix in all those different states. From every point of view, it's impossible," said Don Buist, Ford director of auto emissions and fuel economy.

"Once you get outside Los Angeles, it's hard to see the benefits," he said. "It's hard for me to see the state of Maine, for instance, needing electric vehicles for air pollution."

The "memorandum of understanding" signed by the governors last week gives more momentum to a movement that formally started in 1989, when a coalition of eight Northeast states approved the California rules in principle.

New York and Massachusetts have already approved the new standards, and unless the manufacturers can change a lot of minds in public hearings presently going on, those states will likely adopt the California requirements.

"If I were a betting man, I wouldn't bet against it" in New York and Massachusetts, said Ford's Buist. The new rules would be phased in two years.

Automakers took some comfort in the fact that Connecticut, Rhode Island and Vermont asked for more time to study the memorandum that was signed last week, even though those states have already indicated that they are interested in joining the California club.

"Maybe some people are beginning to listen to what we've been trying to say all along," Buist said.

Report pushes plan to scrap old cars

WASHINGTON — A program to buy and scrap old, fuel-inefficient cars would reduce gasoline consumption and environmental pollution faster than higher fuel economy standards for new cars, says a new report.

Under the plan studied by DRI/McGraw-Hill of Lexington, Mass., owners of pre-1979 cars would be paid $700 to scrap their cars. Analysts said they think about one-third of the 25 million to 30 million pre-1979 cars would be turned in under the voluntary program.

The program would result in savings of about 5 billion gallons of gasoline in the first five years, about the same savings that could be expected under a 1996 fuel economy standard of 32 mpg, said analyst Bernard Campbell.

The program could be funded with a five-year, two-cent-a-gallon gas tax or a tax on new gas-guzzlers. Or automakers could fund it in return for credits against fuel economy requirements, Campbell said.

Volvo adds its 240 series to dealer rebate program

Volvo Cars of North America added the 240 series to its dealer incentive program for 1991 cars.

Volvo's program pays dealers $1,500 on sales of 240 sedan and wagons, $1,750 to $2,500 on 740 sedans and wagons, $2,500 on the 780 coupe and $1,500 to $2,500 on 940 sedans and wagons. The program expires Dec. 31.

Mitsubishi Motor Sales of America Inc.'s incentive programs for customers and dealers expired Oct. 31. The company had not announced new programs last Friday.

GM to align engine activities

PHIL FRAME
Staff Reporter

DETROIT — General Motors' Central Foundry Division will become part of the Powertrain Division in 1992, completing GM's efforts to bring more coordination to its powertrain operations.

Central Foundry, now part of GM's Automotive Components Group, makes cast iron and aluminum powertrain and chassis parts.

The addition of Central Foundry to the Powertrain Division carries out the recommendations of an internal study made several years ago that showed GM needed to combine its engine, transmission and foundry operations to produce better powertrains, said spokesman Steve Gaut.

The Powertrain Division was formed 11 months ago when the former Engine Division merged with Hydra-matic, GM's transmission division. Before that, the engine activities of the Buick-Oldsmobile-Cadillac and Chevrolet-Pontiac-Canada groups merged to form the Engine Division.

The announcement that Central Foundry will become part of Powertrain came halfway through the move of Powertrain's headquarters from Brighton, Mich., to Pontiac, Mich. About 680 employees will be headquartered in Pontiac when the move is completed by the end of the year, Gaut said.

The merger of Central Foundry and Powertrain will begin in early 1992 and is expected to take about a year to complete, Gaut said. ■

LOANS

Rise in bankruptcies not fault of dealers

continued from PAGE 4

second most common reason was unemployment, which was reported by 15 percent of lenders, followed by divorce or separation, reported by 6 percent of the lenders.

The most common age of those filing for bankruptcy is 30 to 40, according to 81 percent of lenders. Fifteen percent said the 22-to-29 age group is the most common.

Eighty percent of the lenders said most bankrupts are married, and 60 percent said most are renters rather than homeowners.

While 67 percent of the banks surveyed reported that they have extended credit to someone who has declared bankruptcy in the past five years, more than 96 percent of those applications are denied by lenders.

The rise in bankruptcies is another sign of the troubled economy. According to the American Bankruptcy Institute, a record 1 million personal bankruptcies will be filed from July 1991 to July 1992.

According to the American Bankers Association, the average consumer installment loan granted in 1990 was $9,149, slightly less than the $9,412 average in 1989. The largest loan volume was in indirect auto loans, with an average amount of $10,781, up from $8,560 in 1989.

The Consumer Bankers Association survey was based on reports from 90 federally insured lenders within average assets of $6.8 billion. Their average indirect auto loan portfolio was $271 million as of June 30. ■

SAAB

Shifting resources to weak regions

continued from PAGE 6

other regions are Western, headquartered near San Francisco; and Central, based near Chicago.

The moves reduce the total number of regional employees from 93 to 70. But the number of district representatives who call on dealers will be increased from 50 to 55, with most of the increase in the South and West.

Saab is also adopting an "asymmetric" regional structure, with a heavier concentration of sales representatives in the South and West, where sales are thin and the parts and service workload is relatively light. The situation is reversed in the Northeast and mid-Atlantic, where sales are already pretty good and there's a greater demand for parts and service because of a higher population of Saabs.

Saab spokesman Steve Rossi said Saab in its present Northeast region has a 27.8 percent share of a competitive group of European import models. The share is 11.8 percent in the Mid-Atlantic; 11.7 percent in the Central region; 6.9 percent in the West; and 5.5 percent in the South. ■

Ford spends millions for paint shops

DEARBORN, Mich. — Ford Motor Co. plans to invest $350 million for paint facilities at two of its truck plants in the United States.

Construction began last week on a 240,000-square-foot paint facility adjacent to Ford's Michigan Truck Plant in Wayne, Mich. That paint plant will cost $185 million and is expected to open in 1993.

Ford also has applied for permits to build a 240,000-square-foot paint shop at its Norfolk, Va., plant. The $165 million facility could open by mid-1993.

The Wayne plant builds F-series trucks and the Bronco sport-utility. Norfolk builds the F series. ■

Mercedes may build 3 models in Soviet Union

DIANA T. KURYLKO

Staff Reporter

FRANKFURT — Mercedes-Benz AG said last week it is discussing the possibility of producing its current line of small and mid-sized models in the Soviet Union after the cars have been replaced in the rest of Europe.

In an unusual twist, the cars — the 190, 200 and 300 families — would not be badged as Mercedes, company officials said.

The talks with Soviet officials are in early stages and no decision is likely until 1996 or 1997, a Mercedes spokesman said last week.

"We are still producing our middle-range car and the compact class, and they are the only ones we could sell over there," he said. "Of course, the cars sold there would not have the star on the bonnet and would be very basic."

Mercedes acknowledged recently that a Soviet machine-tool collective had asked for licensing rights to the Gelaendewagen off-road vehicle. Those talks continue, the Mercedes said.

Mercedes already produces buses in the Soviet Union in partnership with vehicle maker VAZ. ▪

Mercedes electric cars pace marathon

NEW YORK — Two battery-powered Mercedes—Benz sedans helped pace Sunday's New York City Marathon.

Based on the four-door 190 sedan, the two vehicles have a top speed of 70 mph and
93 miles of range at a steady 50 mph. Acceleration to 30 mph takes 13 seconds. Power is provided by a sodium-nickel chloride battery. The sides of the cars are lettered with "Mercedes-Benz Electric Research Vehicle — Zero Emissions."

Mercedes marked its eighth year as the marathon's automotive sponsor.

Ford shuts six plants for week

ANNE E. WRIGHT

Chief Statistician

Ford Motor Co. continues to reduce production in both the United States and Canada because of slow sales.

Six plants have been added to Ford's downtime list this week: the Edison, N.J.; Wixom, Mich.; Dearborn, Mich., and St. Thomas, Ontario car facilities and the St. Paul, Minn., and Kentucky Truck (Louisville) truck plants.

When the Wixom plant returns to work next week, production will be cut to two-thirds of the normal level through year end. A majority of the Lincolns trimmed are cars usually sold to rental accounts, which have switched to a six-month replacement cycle from four months.

General Motors began building the Oldsmobile Achieva at the Lansing, Mich. (M), assembly plant last week.

The Achieva, which will go on sale in January, replaces the Cutlass Calais.

Last week's estimated U.S. car production was 128,828, down 7.1 percent from the prior week and 8.9 percent below the year-ago week.

Canadian automakers scheduled 18,919 cars last week, down 8.2 percent from the prior week and 30.2 percent below the year-ago week.

Year-to-date, U.S. auto production is 14.8 below the same period in 1990.

Canadian auto production for the year is up 2.9 percent over 1990.

Truck production last week in the United States was scheduled at 91,085 units, 5.0 percent ahead of the prior week and 10.3 percent over the same week one year ago.

In Canada, 17,655 trucks were scheduled to be produced, a decrease of 10.5 percent from the prior week and an increase of 22.6 percent over the year-ago week.

Year-to-date, U.S. truck production trails 1990 by 14.1 percent.

Canadian truck production in 1991 is nearly even with 1990, down only 1.5 percent.

Chrysler Corp. scheduled two shifts of Saturday overtime at the Warren, Mich., truck plant last week and has scheduled daily overtime on two shifts at the St. Louis (No. 2) truck plant this week.

Ford scheduled daily overtime last week at the Kansas City, Mo., and the Louisville, Ky., truck facilities.

The Louisville plant was also slated to work one shift of overtime last Saturday.

GM scheduled overtime at three car plants and six truck plants last Saturday: the Flint, Mich.; Doraville, Ga.; and Wilmington, Del., car plants and the Baltimore; Janesville, Wis.; Moraine, Ohio; Pontiac, Mich. (West); Scarborough, Ontario; and Oshawa, Ontario, truck plants. ▪

Toyota bows to U.S. pressure

Plans for manufacturing headquarters put on hold

LINDSAY CHAPPELL
Staff Reporter

Political fire and an uncertain economy are forcing Toyota Motor Corp. to delay plans for a consolidated North American manufacturing headquarters.

Japan's biggest carmaker wants a central operation to coordinate activity on this continent among the four auto plants it will have by 1994. But political pressures surrounding the aggressive carmaker, and slow sales for its Big 3 competitors have chilled the plan.

"This is not a good time, considering the economic and political necessities of the moment," said Fujio Cho, president and CEO of Toyota Motor Manufacturing U.S.A. Inc.

The proposed organization would oversee purchasing, engineering, production and related functions for Toyota's North American plants.

Toyota produces Camrys in Georgetown, Ky., and is building another Camry plant there. It also makes Corollas in Cambridge, Ontario, and pickups and Corollas in Fremont, Calif. In addition, Toyota operates an engine plant, a truck-bed and catalytic convertor plant and all or part of various component plants.

Planning and decision-making for the scattered North American operations are primarily handled separately or through channels in Japan. But more coordinating work is being shifted to the recently expanded Toyota Technical Center in Ann Arbor, Mich.

The delay is further evidence that Toyota's political hazing is beginning to affect the automaker's strategic planning here.

"Eventually we will have to force the idea, but this is not a good time," said Cho, who is also a director of Toyota Motor Corp. in Japan.

In recent months, Toyota has softened its sales growth plan, saying its long-touted mission of reaching 1.5 million annual U.S. sales by the mid-1990s is no longer a firm target.

Top officials in Japan also recently indicated that they are backing away from their publicly

Subaru cuts prices, rebates

CHERRY HILL, N.J. — Subaru of America Inc. used incentive dollars to reduce sticker prices on some models in its best-selling Legacy line for 1992.

Legacy L and L Plus sedans and wagons are priced $520 to $1,420 below their 1991 counterparts. Legacy LS and LSi stickers have been hiked $675 to $975 for 1992. (Price table is on Page 41.)

The 1992 Legacy L and L Plus models currently carry a $500 buyer rebate. There is no dealer rebate on 1992 Legacys. On 1991 Legacys, the dealer rebate is $1,200. That program succeeds one that ended Nov. 4, which offered rebates of $1,200 to Legacy buyers and $100 to $1,600 to dealers.

Tokyo gate down from '89

TOKYO — The biennial Tokyo Motor Show, which has drawn unqualified rave reviews in the international automotive press, has been getting a cooler reception at the box office.

According to official figures released last week, the show's gate after 12 days is down more than 100,000 from the 1.9 million who passed through the turnstiles during the first 12 days of

Slow-selling Escort set for spring redo

KATHY JACKSON
Staff Reporter

A minor makeover is due next spring for Ford Motor Co.'s flagging Escort line.

The car, introduced in spring 1990 as an all-new 1991 model, never took off the way Ford expected. Now the company plans to add a little splash and color in hopes of getting consumers excited again.

"Ford wants to stay competitive with Saturn and the Japanese, that's why they're coming out with a freshening so soon," a Ford engineer said. Workers at the Wayne, Mich., assembly plant say they hear the current cars may get new grills, colors and other amenities to give them a sportier look.

Job No. 1 for the changes is April 6 at the Wayne plant, which produces only Escorts. Job No. 1 at the Hermosillo, Mexico, plant, which produces Escorts and Tracers, begins April 20, according to Ford production schedules.

In a recent memo to suppliers, Ford also asked for bids for a "possible major" change in the Escort/Tracer, a program that Ford estimates at $1.2 billion. Ford has renamed the

October sales trail '90, but annual rate rises

JIM HENRY
Staff Reporter

NEW YORK — Although October car and truck sales were 10.1 percent lower than last year's, the seasonally adjusted annual rate of more than 13 million was the second best of 1991. Only July was higher.

Sales for the month were 1,031,411.

Toyota Division racked up its highest-ever car sales for October, just topping the October record it set last year.

Toyota Motor Sales U.S.A. Inc. gained a full percentage point of market share over last year, to 8.8 percent. Counting trucks — which declined — and Lexus Division, Toyota's unit sales rose 1.5 percent.

"It was a great month," said Greg Penske, general manager of Longo Toyota and Longo

Connecticut says no to California air rules

WASHINGTON — Connecticut Gov. Lowell P. Weicker said his state won't adopt California's tough auto emissions standards, making it the lone holdout in the Northeast's joint effort to curb air pollution.

While Connecticut was backing away from the movement, officials in Rhode Island and Vermont signed on last week. Eleven states from Virginia to Maine, along with the District of Columbia, now intend to follow the California rules.

Arthur Marin, an analyst for the Northeast States for Coordinated Air Use Management, said Connecticut's decision may make it more difficult for downwind states such as Massachusetts, New Hampshire and Vermont to meet federal air-quality standards within their borders.

Saturn workers expected to approve pay increase

SPRING HILL, Tenn. — Workers at Saturn Corp.'s plant in Spring Hill are expected to ratify a new UAW contract Wednesday that will reportedly include a 16 percent pay raise.

The Nashville *Tennessean* last week said the proposal would lift line workers to a base pay rate of $15.57 an hour and skilled technicians to $17.91.

Saturn and the UAW have operated under the independent agreement since the project began in 1985. The agreement currently has no expiration date and allows the company's 4,500 UAW workers to call for contractual changes at any time.

Saturn's existing agreement offered workers 80 percent of the average UAW auto-assembly wage rates, with the promise of financial rewards for achieving product-quality and productivity targets.

Also at issue in the negotiations was the company's retirement plan, which currently contributes funds equal to 5 percent of base pay. According to last week's press report, the proposed agreement would increase contributions to 8 percent.

Chevy and Isuzu recall 100,000 Spectrum types

WASHINGTON — Chevrolet and Isuzu will recall 1987 Chevrolet Spectrum and Isuzu I-Mark subcompacts to reduce excessive emissions of carbon monoxide.

Dealers will install a new computer chip in the electronic control system and also will test oxygen sensors, the EPA said. The recall covers about 24,000 I-Marks and 76,000 Spectrums, which were built in Japan by Isuzu Motors Ltd. California vehicles are not included.

Accord wagons recalled to repair cargo light

TORRANCE, Calif. — American Honda Motor Co. Inc. is recalling about 19,700 of its 1991 Accord station wagons.

The company said a metal washer may not have been properly attached to the cargo area light. If dislodged during assembly, the washer may have fallen inside the light. If the condition exists and if the light's three-position switch is in the middle position and the tailgate is left open, the washer could cause a short circuit within the light. As a result, the light switch may overheat and cause a fire.

Fiat plans 18 new cars at cost of $32.7 billion

TURIN, Italy — Fiat Auto SpA plans to invest the equivalent of $32.7 billion in developing 18 new passenger-car models over the next decade, a company source disclosed Friday.

According to the source, who declined to be identified, the spending program was outlined by Fiat Group Chairman Giovanni Agnelli during a meeting with more than 1,000 Fiat Auto managers on Thursday. The company has not commented on the meeting.

The investment program will be "mostly" financed through cash flow, the source said.

— *The Associated Press*

Toyota dealers in Japan can sell other makes

TOKYO — Toyota Motor Corp. said last week that it will allow its dealers in Japan to sell other companies' cars. Toyota said it will send its 381 dealerships throughout the country a formal document to that effect, but stressed that its current contract does not bar its dealers from handling other lines.

Under the terms of a recent company-to-company agreement, selected Toyota dealers will add Volkswagen products to their lineups.

Nissan Motor Co., Japan's second biggest automaker, said last month that it will remove a clause in its contract with dealers that urges them to sell only Nissan products.

— *The Associated Press*

GM, Isuzu begin output at Tunisian truck plant

KAIROUAN, Tunisia — Production of light commercial vehicles began here last week at a joint-venture plant involving General Motors, Isuzu Motors Ltd. of Japan and Tunisian investors.

The joint venture, Industries Mecaniques Maghrebines, 100 miles south of Tunis, is expected to build up to 4,000 vehicles in 1992 for sale in Tunisia and other North African countries.

GM holds a 20 percent interest in the venture; Isuzu, 10 percent, and Tunisian investors, 70 percent.

Have cycle, will travel

And to think we believed Bob Sinclair, former head of **Saab Cars USA,** when he said he was going to "retire" last Sept. 1. His new business card reads: **Robert J. Sinclair. CONSULTANT — GENERAL BUSINESS AND AUTOMOTIVE.** Recovering workaholic/adviser to harried executives — soother of troubled psyches. **YOUR INTERNATIONAL GOODWILL AMBASSADOR.** Assignments/commissions/adventures considered, five continents. Motorcyclist extraordinaire — party animal. Known to take an occasional sip of sherry. **ON REQUEST.** Destruction derbies — bartending — prayer meetings. Nature studies — references.

FOR A JOB WELL DONE . . . do it in Canada. **Chrysler Corp.'s** minivan plant in Windsor, Ontario, has topped the quality category in the 1991 Canada Awards for Business Excellence. The awards are Canada's equivalent of the Malcolm Baldrige Award in the United States, which Chrysler had considered pursuing earlier this year.

SULTAN OF SALES — The king is back — it says so in *The Guinness Book of Records*. Joe Girard, the hard-charging former **Chevrolet** salesman, is back in the 1992 version of the book as the automotive sales record-holder. Girard retired from an East Detroit dealership in 1977 to become an author and motivational speaker. He says he spent $25,000 on two lawyers and a private investigator to prove that his records weren't broken. (His books and business cards all quote *Guinness*.) In 1991, *Guinness* cited another Chevrolet salesman for lifetime sales. But Girard says some of the sales were disallowed. The book shows Girard's big numbers: 1,425 cars in 1973, and 13,001 over 15 years — all retail.

LEAVES A BAD TASTE — Mazda Motor of America, which attracted the wrath of the Rev. Donald Wildmon, president of American Family Association, for advertising on NBC's "Saturday Night Live," has pulled its ads from the late night TV show — at least for the time being. Jan Thompson, Mazda director of marketing, said Mazda pulled the ads not because Wildmon and his group find the show offensive but because some recent "Live" scripts have passed the line of good taste. Thompson said Mazda will continue to monitor the show and may advertise at a later time.

THE GENEVA LOOK — When the 62nd Geneva International Motor Show opens March 5, the posters pasted to Swiss billboards will be five simple lines tracing the history of car design, from boxy and gray up through aerodynamic and bright orange. Poster-maker Joan Law, a student, says the orange symbolizes "the solar energy of the future."

CAFE bills stalled till '92

Time runs out for Senate action

MAX GATES
Staff Reporter

WASHINGTON — Advocates of increased fuel economy standards for automobiles sold in America have folded their hands for 1991, but they are looking forward to playing with a fresh deck next year.

Sen. Bennett Johnston, D-La., whose comprehensive energy bill was rejected by the full Senate Nov. 1 before any debate, has indicated his bill is dead for this year.

"Everybody is kind of bent out of shape right now. Even if we tried again this year, the chances are slim," said one Senate staff member.

Johnston's bill made the secretary of transportation responsible for increases in corporate average fuel economy, but Johnston had pledged to add an amendment raising CAFE to about 34 mpg by 2001.

A competing bill from Sen. Richard Bryan, D-Nev., will probably also wait until after the new year dawns.

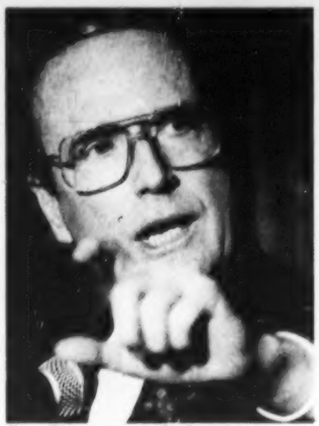
His much tougher CAFE bill calls for 40 percent increases in each automaker's CAFE by 2001. Bryan's bill has been strongly opposed by automakers and Bush administration officials and supported by environmental and consumer advocate groups.

The Senate hopes to recess by the end of the month.

"Time is the controlling variable, and it's not looking good for this year. But the senator hopes to be dealing with this issue in the beginning of the new year," said Bryan's press secretary, Jim Mulhall.

A debate among senators is whether CAFE should be treated as a separate issue or as part of a comprehensive energy bill. During the brief discussion of Johnston's bill in the Senate, several senators indicated a desire to deal separately with the bill's most controversial subsections — CAFE and oil drilling in the Alaska National Wildlife Refuge.

Johnston initially opposed breaking up his bill but may reconsider after his resounding defeat on the floor of the Senate.



Sen. Bryan wants fuel economy standards considered separately.

Bryan wants to see CAFE issues addressed separately.

Sales fall on coasts, but rise in heartland

JIM HENRY
Staff Reporter

NEW YORK — Sales revenues for U.S. dealers fell 5.4 percent in the first half of 1991, but the decline wasn't shared equally by all regions of the country.

The West fell most of all, according to a study by AUS Consultants, an industry analysis group, while sales improved in the middle of the country along the Mississippi River.

Another firm, DRI/McGraw-Hill, suggested that the relative prosperity of the Heartland states could benefit the Big 3 in their traditional stronghold, while the ailing coastal markets in the East and West are traditionally import-friendly.

The Big 3 "got hit like everybody else, but they may have skated through a little better because of their regional strength," said Karen Mason, DRI research associate.

Out of four major regions of the country — West, South, Midwest and Northeast — the West suffered the greatest percentage decline in dealer sales revenue, with revenue down 10.3 percent compared with first-half 1990, the study said.

Despite the revenue decline, the West still had the highest sales per dealership, with average revenues of $7.1 million for the first six months of the year, compared with a national average of $6.2 million.

AUS, which is based outside Philadelphia in West Conshohocken, Pa., estimates sales revenues based on U.S. Commerce Department figures.

The AUS study defined the Western region as Colorado, Wyoming, Montana, Idaho, Washington, Oregon, California, Nevada, Utah, Arizona, New Mexico, Alaska and Hawaii.

Sales revenues for the Pacific sub-region, defined as the three West Coast states plus Alaska and Hawaii, fell 11.0 percent.

But this area was the highest of nine sub-regions in the nation in sales per dealership, at $9.1 million.

According to AUS, sales revenues fell 9.6 percent for the Northeast, consisting of New England and the Mid-Atlantic states. Sales per dealership in the Northeast were $5.8 million on average.

DRI's Mason said the Northeast, especially New England, is in even worse shape than first-half figures indicate, since the economy there fell earlier and deeper than in the rest of the country.

Sales revenues fell least of all in the South, defined as 16 states from Delaware to Texas, plus the District of Columbia.

CHARLOTTE WINTER / AUTOMOTIVE NEWS

Volkswagen, Suzuki consider venture for European minicar

RICHARD JOHNSON
Staff Reporter

TOKYO — Volkswagen AG and Suzuki Motor Co. said last week they will study the possibility of jointly developing and producing a new minicar in Europe.

Industry sources said the new model will be produced by VW's Seat subsidiary at a plant under construction in Martorell, near Barcelona, but officials of the two companies declined to elaborate on their study.

If realized, the deal would give the Japanese small-car specialist a stronger foothold in Western Europe and possibly lead to a broader partnership with VW.

The study is not due to be completed until next May or June. If the two companies decide to go ahead, the new minicar would not reach the market before the middle of the decade.

Industry observers speculate that the agreement could be the start of a much broader relationship between Suzuki and VW in Europe that could involve sales of Suzuki sport-utilities through VW dealers.

That could give Volkswagen dealers in Europe a much-needed product to compete with the sport-utility being co-developed by Ford of Europe and Nissan Motor Co. in Spain and with GM Europe's Opel/Vauxhall Frontera (See story on Page 3.)

A VW-Suzuki linkup could produce a replacement for the nearly 10-year-old Seat Marbella.

In a statement last week, Suzuki Motor President Osamu Suzuki said Suzuki has not decided whether to develop the minicar.

"For this reason I cannot say for sure what type of car we will produce or where we will produce it. But if we produce cars, we will probably produce passenger cars, not commercial vehicles," he said.

Suzuki said the agreements were reached during meetings at the recent Tokyo Motor Show.

"Everything — such as car design, marketing and parts — will be studied from now," he said.

Suzuki said that because "we do not have enough power in personnel, vehicles or funding, we could not enter the European market by ourselves." For that reason, a link with VW was like getting help from "God," he said.

But he stressed that a final accord has not been reached. "I don't know that we will actually have ties with VW," he said.

The deal would be the first cooperation between Suzuki and Volkswagen, which has links with Toyota and Nissan.

Toyota and Volkswagen have produced Toyota-based pickups together at VW's Hannover, Germany, plant since 1989. And Nissan formerly built the VW Santana in Japan under license from VW.

Suzuki, which is 3.5 percent owned by General Motors, will begin producing 1.0-liter and 1.3-liter Suzuki Swift passenger cars in Hungary in late 1992 in a joint venture with local concerns. The joint-venture company plans to build 15,000 Swifts a year initially, rising to 50,000.

Elsewhere in Europe, Suzuki has a 66 percent stake in Land Rover Santana SA, which produces the Suzuki Samurai and Land Rover sport-utility vehicles at Linares near Madrid. Some Suzuki models also are produced by IBC Vehicles Ltd. in Britain, a joint venture between General Motors and Isuzu.

Although Volkswagen and Seat say their proposed project is unrelated to Suzuki's Hungarian deal, there is speculation that whatever minicar design the two develop for Seat also will be produced in rebodied form in Hungary.

Suzuki, Japan's minicar leader with about 27 percent of the segment, exported about 130,000 cars to Europe in 1990.

For Volkswagen, an agreement with the Japanese minicar specialist would solve a long-standing dilemma for its Spanish subsidiary: how to replace the nearly 10-year-old Seat Marbella that is based on the 12-year-old Fiat Panda.

The Marbella competes in a limited European segment beneath such so-called superminis as the Ford Fiesta, Volkswagen Polo and Opel Corsa.

In recent years the segment has included the Panda, Citroen 2CV, Renault 4, Rover Mini, Fiat 126 and Suzuki's SS80/Alto and Cervo. But the segment is reopening with the advent of several new models. They include the Peugeot 105 that overlaps with the supermini segment, Fiat's all-new Cinquecento and the new Mazda 121.

Loan forms standardized

Group to solicit industrywide use

CHARLES M. THOMAS
Staff Reporter

Ray Shepard uses 12 different loan credit applications at Ray Shepard Motors Inc.

He uses forms from Ford Motor Credit Co., General Motors Acceptance Corp., Chrysler Credit Corp., Toyota Motor Credit Corp., two credit unions and five banks. His finance and insurance department even uses a credit application developed in-house for the multi-franchise dealership based in Fort Scott, Kan.

Sometimes, customers fill out three or four different applications, just in case one or more of the lenders refuse the loan.

"Customers don't really like to do it," said Shepard. "But lenders like to see their own loan applications."

The Consumer Bankers Association has come to the rescue with a plan to reduce the pile of credit forms by adopting a standard car loan application for all lenders.

It will replace the surfeit of forms dealers must use from lenders, and it will speed loan approvals. For dealers like Shepard, the association's standard loan application form is long overdue.

"We sure need it," said Shepard. "It is a superb idea that will save time and storage space."

Consumer Bankers Association has been working on the standard form for three years with the cooperation of Ford Motor Credit and Chrysler Credit.

The association hopes to establish industrywide acceptance of the standard credit application by spring, when it plans to begin supplying the forms.

"Because of the competitive nature of the auto finance business, we as lenders are often asked to consider a credit application that was completed at the dealership using another lender's loan application," explained George Williams, chairman of the association's automobile finance committee and senior vice president of AmSouth Bank in Birmingham, Ala.

Williams said a standard application that includes in a uniform format all the loan information that any lender needs will simplify the process and save time for consumers, dealers and lenders.

It wasn't easy to draft a common form. The association contacted 35 banks for input on legal compliance for every state.

Much of the work involved reordering blocks of information already on loan applications. For instance, some lenders place information about the applicant at the top of the page, while others put it in the middle.

"There were not a lot of big differences, just the position of information on the page," said Daniel Buser, the association's vice president of development.

In addition, some lenders require more or different information than others. Hence, all of the information required by lenders is on the standard form, even though some questions probably won't need to be answered by all customers.

The association's next step is to name a task force of bankers, finance company executives, dealers and computer software executives to convince the industry to adopt and use the form.

GM approves use of recycled coolants

Four systems pass year-long test

DALE JEWETT
Service Editor

After a year-long study, General Motors has approved four engine coolant recycling machines for use by dealers.

The systems, and their manufacturers, are:

- CR5001 made by ACTIV Inc.
- Bad Ethyl produced by Finish Thompson Inc.
- Cooler-cleaner by BG Inc.
- American Fluid Technology by Butler, a service that visits dealerships with truck-mounted recycling machines.

Recycled coolant produced by these four systems is comparable to virgin coolant, said Wayne Bradley, coolant project coordinator for GM's service technology group. He said such coolant is safe to use in all GM cars and the U-body minivans — with certain exceptions — without voiding warranties.

The recycled coolant is not approved for use in vehicles produced by GM's Truck & Bus Group, which include light- and medium-duty trucks and the G-body van. This is because the formulas have high amounts of silicates, which can shorten the life of the water pump seal, Bradley said.

The other exception is vehicles suspected of having failed head gaskets, Bradley said, because the tests did not evaluate the effectiveness of recycling processes on used coolant contaminated by excessive blow-by gases.

GM dealers will receive electronic service bulletins detailing the recommendations and the exceptions within the next 10 days.

Two other recycling systems, the Stanadyne ECR and the Wynn's Mark X, are still being considered.

GM is talking with the makers of the approved systems about inclusion in its Dealer Equipment Program, which lets dealers buy the equipment at reduced rates. That process is expected to be completed in December.

GM is making the results public now because dealers in a number of states, notably California and Florida, already must comply with laws requiring recycling or safe disposal of used coolant. Those dealers may want or need to buy a recycling machine outside the dealer program, Bradley said.

"This has become a big issue for dealers. They're not allowed to dump it down the drain anymore," Bradley said. "And because used coolant can be considered a hazardous waste, hauling companies have to be licensed, and there's not always a lot of them around.

"There was a sense of urgency about this. I don't think the service community could wait, and we're able to say these systems produce a coolant that meets the specifications, at least on the lab level."

Bradley said he plans a fleet test of recycled coolants for early next year. "It would be wise if we took some of each and got it into fleet vehicles," he said.

GM also is continuing to test coolant sold by off-site recycling centers. Two facilities are involved in the test, and testing of one will be completed in about a month, Bradley said. That part of the project was slowed by the large number of samples that GM submitted to the testing lab it hired.

The four machines that GM has approved use different recycling processes. The ACTIV and Finish Thompson systems use vacuum-assisted distillation to remove impurities.

The BG system relies on de-ionization, filtering out impurities at the ionic level.

The Butler system uses filtration with a centrifuge, passing the coolant through a filter to remove solubles, then heating the solution and spinning it in a centrifuge before new inhibitors are added.

Bradley conducted the test by taking samples from 200 GM employees' cars.

Results of the study will be presented in February at the annual SAE convention in Detroit.

in brief

1992 Chryslers carry flash chips

HIGHLAND PARK, Mich. — Chrysler Corp. will equip about 100,000 of its 1992 cars with "Flash Memory" programmable computers and will expand their use to about 1.2 million vehicles by 1994.

The system allows dealers to quickly reprogram one or more of a vehicle's on-board computers.

The 1992 cars using the Flash Memory system include those with 2.2- and 2.5-liter turbocharged engines and all V-6 cars and minivans sold in California.

GM reorganizes service contracts

DETROIT — General Motors has reorganized its extended service program into three plans for 1992.

GM's standard warranty runs three years or 36,000 miles.

The Powertrain plan offers 10 term and mileage options ranging from three years/50,000 miles to six years/100,000 miles for transmission/transaxle assemblies. It requires a $50 deductible.

Major Guard provides basic mechanical coverage. It also covers 10 term and mileage options up to six years/100,000 miles and has a choice of zero or $50 deductible.

Major Guard Gold adds scheduled maintenance and replacement of specified wear items. Eight term and mileage options are offered, and there is no deductible.

The programs are available for newly purchased 1989-92 GM vehicles, excluding Saturn.

Parts group names president

TORONTO — Neil De Koker has been named president of the Automotive Parts Manufacturers' Association.

De Koker worked for Magna International for four years and spent 23 years at General Motors, where he helped develop the management-employee partnership at Saturn Corp.

Honda off-site service test program delayed

First dealer blames local red tape

KRISTINE STIVEN BREESE
Staff Reporter

TORRANCE, Calif. — American Honda Motor Co. planned to start signing up dealers for its satellite service program this fall after testing the concept with five facilities around the country.

Instead, Honda has seen its pilot project get bogged down in red tape and delayed more than eight months.

The satellite service center concept is Honda's attempt to help dealers win back service customers from independent service shops. The service-only facilities have to be located within a five-mile radius of a dealer's showroom.

Honda launched the program in January and the first center was supposed to open before spring. Four more were due to open by summer.

To date, none have opened. The first is now slated to open early next month in Madison, Wis.

John Zembrick, owner of Zembrick Honda in Madison, said the project has been delayed because of "zoning and bureaucratic red tape." Not only is it behind schedule, it's over budget.

Zembrick said he's spent $965,000 on the eight-stall facility. Honda had said that dealer costs would range between $380,000 and $680,000.

Zembrick admits that at least $100,000 of what he's done, certain design elements and the addition of a child-care area, were optional. That still leaves a gap between Honda estimates and reality.

A Honda spokesman said the program is still a pilot. A second dealer, this one in Southern California, is almost ready to break ground.

One interested dealer, who asked to remain anonymous, said he's intrigued by the idea, but concerned about the cost.

"It's only for light service," said the dealer.

"That means high volume but low-cost service like oil changes. You have to wonder about spending close to $1 million in this economy for that kind of business."

Demand for A/C training grows

GRAND PRAIRIE, Texas — Demand for the International Mobile Air Conditioning Association's training and certification program is increasing as a Jan. 1 deadline looms.

Amendments to the Clean Air Act enacted last year require technicians working on vehicle air conditioning systems to be trained and certified, and mandate recycling of the ozone-damaging refrigerant.

Technicians in Florida, Wisconsin and Southern California faced similar requirements before the federal deadline, and all three states have approved the association's program course.

Lew Langsam, of California's South Coast Air Quality Management District, estimates some 15,000 technicians will need to be trained in the four-county Southern California area. Training begins this month.

Dennis Tober, environmental specialist with the Florida Department of Environmental Regulation, pointed out, however, that technicians certified under a state's regulatory legislation still must notify the EPA of their certification to comply with the federal deadline.

The association worked with states and the EPA to develop the training program.

The program includes a 25-minute video that includes training on the responsible handling of chlorflurocarbons, environmental and regulatory issues, and instructions on the proper use of recovery and recycling equipment.

Participants then take a written test, supervised by a test administrator. The completed tests are sent to an independent third party and graded before certification is awarded.

Hands-on experience with recovery equipment also is offered in states that require it.

Corporate volunteers from Flamingo Oil Company in Miami have already trained more than 2,300 technicians.

"Our deadline was July 1. Many of our customers are car dealers and tire stores, and we felt an obligation to help get their people certified," said president Dale Moseley.

"The film does a good job of demonstrating the proper use of refrigerant recovery and recycling equipment. If the technician has had any experience at all, he won't have any trouble with the test."

September service business rises above year-ago level

DETROIT — Service and parts and accessories business at dealerships increased in September, exceeding the amount recorded in September 1990.

Service business was 101.7 percent of last year's, according to the Automotive News Service Index. It was the first time since April that business topped the year-earlier month.

But after the first three-quarters of this year, total service and parts sales trailed last year's by a narrow margin. The service index through September was 99.3 percent.

In September, all five categories in the index posted gains, led by repair orders written with a 4.5 percent increase. Gross profit on all labor and parts and accessories sales rose 2.4 percent.

In the year-to-date tally, shop parts sales was the biggest gainer, up 2.5 percent. Repair orders written and total labor sales also were up slightly, but losses were recorded in sales of all parts and accessories and gross profit on all labor and parts and accessories sales.

A number of dealership service managers attributed September's increase to more repair work on older vehicles and increased sales of used cars. Several respondents said their dealerships promoted service business more in advertisements.

One respondent noted: "I think we are finally coming out of whatever the last few years should be called — hell — maybe that's the term."

Figures used in the Automotive News Service Index are compiled from monthly reports on service and parts business from a cross-section of new-car dealerships.

SERVICE INDEX
101.7*

	Sept., '91 vs. Sept., '90	Jan.-Sept., '91 vs. Jan.-Sept., '90
Gross Profit on All Labor and P&A Sales	+ 2.4%	− 0.70%
Repair Orders Written	+ 4.5%	+ 0.50%
Total Labor Sales (Customer & Warranty)	+ 1.4%	+ 0.04%
Shop Parts Sales (Customer & Warranty)	+ 1.5%	+ 2.50%
Sales of All P&A	+ 1.3%	− 1.10%

* Survey by Automotive News shows that dealers' service and parts business in September 1991 was 101.7 percent of business in September 1990. Service business in the first nine months of 1991 was 99.3 percent of business in the corresponding period in 1990.

SALES

Toyota racks up highest-ever totals

continued from PAGE 1

Lexus in El Monte Calif., the top sellers for both makes.

Although light-vehicle sales were down 10.1 percent in October, the dip was less than the 12.3 percent decline for the year to date.

October was the first month of the traditional model year. Some new models sold well, such as the Lexus ES300 and the Pontiac Bonneville.

Heavy advertising probably helped some slightly older models, such as the Nissan Pathfinder.

But rebates, cut-rate financing, lease deals and dealers' best efforts weren't enough to rejuvenate the overall vehicle market.

Tom Webb, chief economist for the National Automobile Dealers Association, compared the selling efforts to "beating a dead horse."

Nevertheless, car sales in October were 4.4 percent higher than in September, and the October SAAR for cars was 8.8 million units, 12.8 percent above the previous month.

October light-truck sales were the lowest since February. The light-truck SAAR was 4.2 million, 9.5 percent below September. September's light-truck annual rate was the highest of the year, boosted by a battle between Ford and Chevrolet for model-year leadership in full-sized pickups. October was payback month.

Mercury, Mitsubishi, Acura, Subaru, Lexus, Eagle and BMW posted gains in car sales over October 1991. Mitsubishi also reported an increase in truck sales, as did Dodge, Nissan, Pontiac, Plymouth, Mazda, Chrysler and Suzuki.

Infiniti, for the first month ever, did not show a year-to-year gain.

Infiniti sales were 23 percent below last October, when the entry-level G20 was brand-new. The luxury division of Nissan Motor Corp. in U.S.A. is in its third model year. For 1991 to date, Infiniti sales are up 69.6 percent.

Spokesman Greg Elliott said Infiniti is "between ad campaigns," and Infiniti is up against new models at BMW and Lexus. A new ad campaign starts in December, he said, and the new Infiniti J30 is due next spring.

October car-truck sales for the Big 3 were off 12.9 percent from last year. General Motors sales fell 14.0 percent, which cut GM's market share 1.5 points to 33.3 percent. Sales of the Pontiac Bonneville jumped 25.4 percent in the last 10 days of October, and October Bonneville sales were 16.4 percent over the year-ago month. But Pontiac sales plunged 31.0 percent overall.

Ford Motor Co. slipped 14.4 percent. October sales of the Bronco II/Explorer were up 14.3 percent, but Ford light-truck sales fell 14.0 percent.

Chrysler Corp. was down 7.3 percent from October 1990, the lightest loss of the Big 3, thanks to an 11.9 percent increase in light-truck sales. Sales of both the Dodge Caravan and the Plymouth Voyager were up more than 25 percent over last year.

Japanese nameplates were about even with the year-ago month, down 328 units or 0.1 percent. That was a considerable improvement over their year-to-date sales, which were 4.5 percent below last year. Japanese nameplates had 26.6 percent of the October market, up from 24.0 percent a year ago.

Toyota Motor Sales U.S.A. attributed its gains to new Lexus models like the ES300 and the SC300 and SC400 coupes. Toyota also began selling an all-new Camry. Camry sales declined in October, but dealers said the 1992 model sold well and they wish they had more.

Customers have described the redesigned Camry as "a little Lexus," said Sterling McCall of Sterling McCall Toyota in Houston, another Top 10 Toyota and Lexus dealer.

That's probably good news for Toyota, but worrisome for Lexus.

McCall said he sold out of 1991 Toyotas in October, and he had fewer than 15 new Camrys in stock.

American Honda Motor Co. Inc. sales were up 38 units, or 0.1 percent, for October, with Acura Division ahead 2,089 and Honda off 2,051. Sales for Nissan Motor Corp. in U.S.A. were off 5.8 percent for the month and 6.3 percent for the year to date. ■

STEMPEL

Congress' inactivity cripples industry

continued from PAGE 3

■ Stempel accused Congress of inactivity on the budget and trade deficits, unemployment, the recession and other key economic issues.

He said Congress is more interested in "piling on" an already depressed auto industry higher corporate average fuel economy rules that are likely to have only "perverse effects."

"That's not the way to run the country," Stempel said. "We should be growing and we should be adding jobs. In order to do that, you've got to get the country back in a growth position and you've got to have us competitive on a worldwide basis. And you cannot be doing things at home to make you non-competitive in the world market."

■ Stempel suggested that as bad as the federal budget deficit is, President Bush should temporarily put deficit reduction on hold and work on kick-starting the economy.

"Maybe the president has to put some different priorities out there and recognize that while he'd like to work on the deficit, he's got a recession on his hands," Stempel said. "We can fix the deficit and drive ourselves down into an even deeper recession."

■ If customers don't believe the recession is over, it isn't over, Stempel said.

"I would like you to believe it, I would like my friends and neighbors to believe it, and I'd like my customers to believe it," Stempel said.

"Unfortunately, their children can't get a job, having just graduated from college, and the guy down the street has been laid off for the first time in 30 years.

"You know what? The customer says, 'I don't think the recession is over.' This time, I think maybe the public is right."

■ Stempel did not offer a goal for GM's 1992 market share, other than to state the obvious: "As much as we can get. Each 10th (of a point) has come very hard, and it's going to continue to be that way."

Through October, GM had 35.1 percent of the U.S. car and light-truck market for 1991, down from 35.8 percent for the first 10 months of last year.

The company's long-term goal is to get back above 40 percent.

■ Stempel is happy with Saturn's high sales per dealership: "You don't have to be a Japanese dealer to have (good) sales per dealer," he said. "That's why 50 percent of the Saturn dealers are in the black, which is good."

■ GM will utilize 100 percent of plant capacity by the end of 1992, as planned, but Stempel would not discuss how it will get there or how many more plants will be

All models	Company pays U.S. luxury tax

Automakers plant new crop of rebates

ARLENA SAWYERS
Staff Reporter

Nissan Motor Corp. in U.S.A., Subaru of America Inc. and Toyota Motor Sales U.S.A. Inc. announced new incentives last week. Also, Chrysler Corp. and Saab Cars USA Inc. sweetened their programs and Cadillac is offering an incentive to a select group of consumers.

Through Jan. 3, **Nissan's** factory-to-dealer rebates on 1991 vehicles are $300 to $1,800 on cars, $1,200 on pickups and $1,400 on Pathfinder.

On 1992s, the dealer incentives are $300 to $1,000 on cars, $900 on pickups, $600 on Pathfinder.

The dealer rebate of $2,500 to $3,500 on sales on 1991 300ZX models continues through Feb. 2.

Subaru's new program includes customer and dealer incentives. Customer rebates are $500 on 1991 and 1992 Loyale front-wheel-drive sedans and all-wheel-drive wagons; $2,000 on the 1991 XT and XT6; and $500 on the 1992 Legacy L and L Plus.

Subaru dealers receive $1,200 on all 1991 Legacys. Some 1991 Legacys carry an additional $500 for dealers, depending on the region. Subaru's program expires Jan 3.

Toyota is paying dealers $500 to $700 on 1991 Camrys and 1991 and 1992 Corollas. On 1991 and 1992 pickups, dealers receive $600 to $1,400. Payments are based on performance against quota. Toyota's program expires Jan. 3.

Chrysler reinstated its new-car retail purchase or lease program for military personnel. The rebate is $500 on eligible 1991 or 1992 models and is in addition to other consumer rebates.

Cadillac is sending select prospects a certificate worth $2,000 off the price of a 1992 DeVille/Fleetwood or Brougham. Dubbed the "Cadillac Purchase Dividend," the certificate is good through Dec. 31.

Saab broadened its "Flexible Finance" program to include all 1992 Saab models. It previously covered only 1992 convertibles in the 900 and 9000 series.

The program allows buyers to choose their monthly payment and finance rate based on down payment. Terms are available for 24-, 36- and 48-month contracts, and down payment requirements range from 20 percent to 40 percent. The program ends Nov. 30. ■

INCENTIVE WATCH— DEALER INCENTIVES

NEW PROGRAMS

NISSAN (expires Jan. 3, unless otherwise noted)

1992 models

Stanza	$1,000
Maxima GXE	$800

Corvette ZR-1 (1991)	$3,000
Other Corvette (1991)	$2,000
Cadillac Allante (1991) (no expiration date)	$7,500 on first sale, $8,500 on additional sales
Pontiac Sunbird	$300

CHRYSLER CORP. (expires Dec. 31)

Eagle Talon (base, 1991-92)	$750
Jeep Cherokee Laredo (1991-92)	$1,000

HYUNDAI (California only, 1991 models, expires Nov. 30)

Excel	$300
Sonata	$400
Scoupe	$500

Payment is for models purchased from Hyundai Motor America.

ISUZU (1991-92 models, unless otherwise noted; expires Dec. 31)

Cars*	$800-1,800
All pickups*	$1,000-1,500
4x4 pickups (bonus, 1990-91)	$500
Trooper*	$1,500-1,800
Rodeo*	$00-500

*Based on number sold

LOTUS (1991, no expiration date)

Elan	$5,000
Esprit Turbo	$11,000-15,000

PEUGEOT (no expiration date)

405	$5,000
505	$6,000

SUZUKI (expires Dec. 3)

Swift (1991)	$700-1,000
Swift (1992)	$400-700
Sidekick (1991)	$500-1,000
Sidekick (1992)	$300-700

STERLING (no expiration date)

All models	$8,000*

*Or $3,000 if customer chooses 0 percent financing

TOYOTA (expires Jan. 3)

Camry (1991), Corolla (1991-92)	$500-700, quota
Base 4x2 pickup (1991-92)	$1,000-1,400, quota
Other pickups	$600-1,000, quota

VOLKSWAGEN (no expiration date)

Passat (1991)	$1,500
Jetta, Fox, Golf (1991)	$500
All 1990 cars	$500-1,500

VOLVO (1991 models; expires Dec. 31)

240 series	$1,500
740 series	$1,750-2,500
940 series	$1,500-2,500
780 coupe	$2,500

Toyota inquiry is a murky quest

LINDSAY CHAPPELL
Staff Reporter

A congressional probe into charges of corporate misconduct by Toyota Motor Corp.'s U.S. operations will have to sort through a thicket of complicated and often mysterious industry sales practices.

The charges, contained in lawsuits against the carmaker's independent distributor in the Southeast, allege that Toyota Motor Sales U.S.A. Inc. knew of or participated in falsifying U.S. sales figures, cheated on restraints that limit Japanese car exports to this country and engaged in deceptive advertising.

Most of the charges cover the period from about 1982 to 1986, making fact-finding more difficult.

A look at two of the charges shows how complex the issues are:

■ Dodging export restrictions

Documents provided by the Washington office of Rep. John Dingell, D-Mich., say that in the early to mid-1980s, Toyota Motor Corp. sidestepped restraints on exports from Japan by moving cars to U.S. dealers through Guam and Puerto Rico.

During that time, a bilateral agreement that limited exports evolved into Japan's unilateral decision to cap its car exports to the United States at 2.3 million a year. The companies' individual quotas customarily are not revealed, but at the time Toyota was believed to be bumping against its ceiling. Toyota built its first cars in the United States in 1985; its car sales reached 640,000 in 1986.

According to the allegation, Toyota knew that its dealers were skirting the restraints by using a secondary pipeline of cars from U.S. territories.

Officials at both Toyota Motor Sales and Southeast Toyota Distributors Inc. acknowledge that individual dealers may have engaged in small-time "gray-market" importing, but they maintain that there was no official sanction. They also note that dealers of many import lines have been guilty of gray-market importing over the years.

Toyota spokesman James Olson said "thousands" of so-called Toyota "swimmers" entered the United States indirectly.

Dennis Fitzgibbons, an aide to Dingell, said the question is whether Toyota — or the Japanese government — violated the spirit of its export policies. "It might not be illegal, but it would have trade-policy implications if it comes to light that a foreign government wasn't honoring" its own trade policies, he said.

■ False sales reporting

Toyota Motor Sales and Southeast Toyota are accused of operating a false-sales reporting scheme that affected the way imported cars were allocated within the United States.

According to suits filed by current and former dealers for Southeast Toyota, the distributor forced retailers to submit bogus sales reports to both the factory and to state vehicle registration authorities in order to misrepresent Southeast's sales volume. Because Toyota cars are allocated to dealers on a "turn-to-earn" basis, the territory that reports the most sales receives the largest share of future allocations.

Toyota has dealt with the false-reporting issue before. In 1990, another independent distributor, Mid-Atlantic Toyota Distributors Inc., sued the U.S. sales company for $100 million, complaining that its own allocation of cars had been unfairly limited by false reporting elsewhere in the country. Toyota settled that suit out of court and took over the Mid-Atlantic operation last year.

The new charge is leveled mainly at Southeast Toyota. The distributor has denied the charge and has maintained that it has aggressively pursued and penalized any dealer who misreported sales.

Plaintiffs in the various lawsuits claim the false-reporting game caused dealers to swallow financing costs on cars they were forced to list improperly as sold. Documents released by Dingell's office charge that false sales results were incorporated into Toyota's U.S. ad claims, creating an untrue picture of the brand's success. ■

500,000 view Prague's first show since '47

RICHARD BRUNER

Staff Correspondent

PRAGUE, Czechoslovakia — The first international auto show held in Prague in 44 years drew nearly 200 exhibitors and more than 500,000 visitors during an eight-day run last month, show officials say.

As might be expected, Western European and Japanese exhibitors dominated the show, called Auto Salon Praha 91.

Of 197 companies setting up exhibits in Prague's central exhibition hall, Germany accounted for the most, with 135.

Following Germany was Italy with 22 exhibits; Austria, 12; Japan, seven; Britain, five; the Netherlands, four; Belgium, four; France, two; Spain, two; and Sweden, two.

Among vehicle makers from the former Soviet-bloc countries, only Skoda — now a Volkswagen affiliate — and Hungary's Ikarus, a bus manufacturer, had displays at the show.

"They probably couldn't afford to come,'' Jiri Hajek, a show spokesman, said of the absent Soviet and East European vehicle makers.

Hajek, director of the press center, said the show's high attendance reflected the fact that Czechoslovakians have been starved for modern automobiles since a Communist takeover in 1947 shut the country off from the West.

According to Hajek, Czechoslovakia's 15 million citizens own 2 million passenger cars, or one for every 7.5 persons.

Although that is a relatively high rate of ownership for a Soviet-bloc country, the average age of the nation's car park is 10 years.

That might indicate potential demand, he said, but replacement of the country's aged car fleet will take years to occur because of rising prices and stagnant wages.

Where the country's average wage has held at about $118 month, the price of a basic Skoda has risen from the equivalent of $3,200 one year ago to more than $4,200 now, he said.

Truck build hits 41-year high in Oct.

ANNE E. WRIGHT

Chief Statistician

United States and Canada car and truck production of 1,166,931 units in October was the highest monthly output this year.

U.S. and Canadian truckmakers assembled more vehicles in October than in any October since 1950. They built 393,375 trucks in the United States and 86,270 in Canada for a total of 479,645. That was an increase of 15.9 percent over September and 7.4 percent over the year-ago month.

U.S. and Canadian carmakers produced 687,286 vehicles, the lowest October production since 1982. U.S. makers assembled 588,161, down 10.1 percent from 1990, and Canadian makers slipped 14.7 percent below the year-ago month.

Last week's estimated U.S. car production was 124,716, down 1.2 percent from the prior week but 14.0 percent above the year-ago week.

Canadian automakers scheduled 16,385 units last week, a drop of 21.4 percent from the prior week and 32.3 percent below the year-ago week.

Year-to-date, U.S. auto manufacturers are 14.2 percent behind 1990. Canadian auto production for the year is up 2.2 percent over 1990.

Truck production last week in the United States was scheduled at 83,966, down 8.8 percent from the prior week but up 49.5 percent over the year-ago week.

In Canada, 21,404 trucks were scheduled to be produced, an increase of 6.0 percent over the prior week and 38.6 percent over the year-ago week.

Year-to-date, U.S. truck production of 3,008,335 trails 1990 by 13.2 percent. Canadian truck production is 0.4 percent behind 1990.

Chrysler Corp. has scheduled daily overtime at the St. Louis (No. 2) truck assembly plant this week.

The company extended the downtime at the Bramalea, Ontario, facility for a fourth week due to slow sales.

Ford Motor Co. worked daily overtime last week at the Kansas City, Mo., and the Lorain, Ohio, truck plants.

Ford has idled four plants this week due to slow sales: the St. Louis and the Oakville, Ontario (Ontario Truck) truck plants and the Dearborn, Mich., and St. Thomas, Ontario, car plants.

General Motors slated overtime last Saturday at six plants in the United States and four in Canada. The U.S. plants were the Flint, Mich. (Buick City); Lordstown, Ohio; Wentzville, Mo.; Arlington, Texas, and Oklahoma City car plants and the Lordstown, Ohio, truck facility. Canadian plants were the Oshawa, Ontario (No. 1 and No. 2) car plants and the Oshawa and Scarborough, Ontario, truck plants.

Chrysler plants in Canada will be closed today in observance of Remembrance Day. GM and Ford are scheduled to work.

Chrysler ends Alfa venture

NEW YORK — As expected, Chrysler Corp. has dropped out of its 50-50 joint venture with Fiat Auto S.p.A. in Alfa Romeo Distributors of North America.

Fiat now owns 100 percent of the Orlando, Fla.-based company, which distributes the 164 sports sedan and Spider through about 200 U.S. dealers.

The parent company announced Friday that it had appointed Vittorio Vellano as president and chief executive officer of Alfa Romeo Distributors. Fiat owns Alfa in Italy.

The joint venture was formed in February 1989. Its 1991 sales were 3,125 through October. Though that's an improvement from 1990 levels, volume has been a fraction of what Fiat and Chrysler had hoped.

"As far as Fiat is concerned, the important thing is that Alfa is fully

Big 3 have major role in health care debate

Makers seek relief from massive costs

KATHY JACKSON
Staff Reporter

The domestic automobile industry, saddled with a huge competitive disadvantage as a result of its out-of-control health care costs, will be in the center of the battle as national health care coverage becomes a dominant political issue in Washington.

"It will be the No. 1 domestic issue next year in the presidential election," said Jack Shelton, director of corporate and employee insurance for Ford Motor Co. "The administration will be forced to come out of the closet, and that means it's important for companies like Ford to be involved in the process."

Shelton said Ford supports an approach known as pay-or-play. "The company can play — continue to pay as it does now — or pay — go into a public plan and pay a tax" to the government, he said.

Last week, Chrysler Corp. joined industry and union groups in backing a pay-or-play proposal by the National Leadership Coalition for Health Care Reform.

Under the coalition's proposal, employers would be required either to provide health care benefits for employees or pay into a national health plan that would cover their workers.

Ford did not sign the report even though Ford was a founding member of the coalition and supports pay-or-play.

"We have not completed our review of health care reform options," a Ford spokesman said.

Chrysler Vice Chairman Robert S. Miller said lack of a national health care policy hurts Chrysler's competitiveness.

General Motors spokesman John Maciarz said GM supports national health care reform but has not taken a position on any particular proposal.

Used cars top the charts

Customers still need transportation, so sales of used cars soar while new-car sales sink. How dealers are using that trend to survive the recession is in *Automotive News Insight*, which follows Page 24.

New Jeep may be shared with Dodge

If Grand Cherokee sales sputter, clone ready for '94 intro

MARY CONNELLY

Chrysler Corp.'s Jeep Grand Cherokee is a vehicle with a mission.

And Jeep-Eagle dealers have their own mission: Sell out the $1 billion Grand Cherokee plant, or risk seeing a version of the new Jeep given to Dodge as early as the 1994 model year.

Job 1 for the four-door Grand Cherokee comes in just seven weeks. Then the vehicle must take on the dominant Ford Explorer in the four-door compact sport-utility market.

As a symbol of Chrysler's hoped-for renaissance in products, the Grand Cherokee has to deliver on quality without a misstep.

And the Grand Cherokee must make money. Healthy profits are needed to justify the investment in the new plant. Chrysler's product spending budget is thirsting for a cash infusion from sales of the Grand Cherokee.

Dealers: Copy Explorer prices > 42

But do the 1,557 Jeep dealers have the capacity to accomplish the mission?

"Have we got a big job to do? You bet. Can we do it? We think we've got a shot at it," says Gary Gray, chairman of the Jeep-Eagle National Dealer Council.

If Jeep can't sell out the new plant, Chrysler is prepared to give a version of the Grand Cherokee to Dodge. The company already has developed a Dodge prototype.

GM's brands plan unified assault on California

RAYMOND SERAFIN
and CLEVELAND HORTON
Crain News Service

General Motors has quietly formed a task force for a stepped-up marketing assault on the California market.

The committee includes GM corporate officials and representatives from the company's six vehicle-selling divisions. There have been three meetings since May, with as many as 50 participants.

GM officials refused comment on the program that involves rare collaboration among marketing divisions. But sources familiar with the project describe it as a multi-disciplined approach covering everything from advertising to inventory control. The goal is to identify 10 basic marketing and sales strategies common to all GM divisions. Each division can then devise its own strategy and budget. These budgets will include recommendations for corporate advertising funds to be spent in California.

One aspect involves Chevrolet, Pontiac, Buick, Oldsmobile, Cadil-

Importers revising power structure

Independents used as role models

JIM HENRY
Staff Reporter

NEW YORK — A virtual dinosaur of American auto retailing — the independent distributor — is coming back from near-extinction in hybrid form.

Over the decades, auto importers have bought out — in sometimes bloody skirmishes — all but five of the dozens of independent distributors that once helped blanket America with foreign cars. Now, in a switch, some importers are trying to revive the best attributes of the independent distributor by sending power back to the regions.

The buyouts of the independent distributors have given importers the kinds of things any established sales operation wants: control over pricing, rebates, warranty claims, image, dealer appointments and allocation.

Along the way, the importers have also swept away some powerful independent entrepreneurs who sometimes had as much clout as headquarters itself.

Wagon ready

A prototype of the Toyota Camry wagon was caught undergoing testing in the United States. Like the new Camry sedan, the wagon shares the same platform as the Lexus ES300. Production is scheduled to begin next March in Georgetown, Ky. Toyota is planning on 55,000 units a year, including right-drive and left-drive exports. This test car shows a more traditional style roofline, lacking the aerodynamic flair of its main competitor in the mid-sized wagon segment, the Ford Taurus.

GM truck replacements delayed until 1994-96

DETROIT — General Motors will not replace its light trucks that compete with the Ford Ranger, Explorer and Econoline/Club Wagon until 1994, 1995 and 1996, respectively.

Poor economic conditions have led GM to delay introducing its new S/T pickups until model year 1994, and S/T sport-utilities until model year 1995, GM sources said.

The full-sized G-van, a program which had been floating on the GM product planning charts for several years, now is on the schedule for a 1996 model year debut, sources confirmed.

The S/T pickups are sold by Chevrolet as S10 pickups and by GMC Truck under the Sonoma nameplate. The sport-utilities are sold as Chevy S10 Blazers and by GMC Truck as Jimmys. The full-sized vans are sold as Chevyvans and Chevy Sportvans, and as Rallys and Vanduras by GMC Truck.

The S/T pickups haven't been changed since 1982, while Ford will re-do the Ranger in 1993; the S/T sport-utilities also are unchanged since 1983, while Ford revamped the popular Explorer for 1991; the G-vans are unchanged since 1970, while Ford introduced a new Econoline for 1992.

— Phil Frame

Chrysler on track to slice 3,000 workers

HIGHLAND PARK, Mich. — Chrysler Corp. is on schedule to cut 3,000 people from its white-collar work force by year end. The company said it expected to reach its goal through attrition.

Chrysler declined to specify how short it is of the 3,000 mark. In April, 1,425 salaried employees accepted early retirement and voluntary termination offers as part of the cutback.

— Mary Connelly

Nissan reorganizes marketing department

LOS ANGELES — Nissan Motor Corp. in U.S.A. has reorganized its marketing department to focus separately on sedans, sports cars and trucks.

Jack Collins, 45, will become sedan marketing manager. He had been director of advertising for the Infiniti Division. John Rinek, 45, was appointed manager of sports car marketing. He was advertising manager at Nissan Division. Bill Bivens, 50, goes from Nissan merchandising manager to truck/utility vehicle marketing manager.

The three will oversee advertising, pricing, promotions, incentives, merchandising and product positioning activities for their areas. Nissan made the move to integrate its marketing efforts and give each brand "a champion" at the national level, according to Tom Orbe, general manager of Nissan's office of resource allocation planning.

It will also help the company interface with its seven regions which are being restructured. (See story on Page 28.)

— Kristine Stiven Breese

Honda to bolster U.S. engineering staff

TOKYO - Honda Motor Co. says it will expand its U.S. engineering staff by mid-decade to facilitate increased product co-development with North American suppliers and new derivative models designed specifically for the American market.

A Honda official said that by the mid-1990s, the company will increase personnel at Honda R&D North America Inc. facilities in Ohio and California to 500 from the current 360.

A spokesman said increased staffing is "basically for getting more U.S. suppliers involved with our design-in process. We want to move further than the other (Japanese) companies, which are still relying on Japanese r&d functions for design-in."

The increased U.S. engineering staff also is expected to spin off new North American product derivatives like the Ohio-built Accord wagon that was designed and developed in the United States and is produced only in Ohio.

— Richard Johnson

Saab posts $383 million loss for three quarters

FRANKFURT— Saab Automobile AB, the Swedish carmaker that is 50 percent owned by General Motors, said Friday that it slightly narrowed its loss for the first three quarters of 1991 to 2.28 billion kronor (about $383.2 million) from the equivalent of $397.5 million a year earlier.

Revenue fell 6 percent in the period, to 10.45 billion kronor ($1.75 billion), Saab said.

The company attributed the loss to continuing high production costs and to severe sales declines in its four biggest markets: the United States, Sweden, Finland and Great Britain.

VW's new van suitable for wheelchair lifts

AUBURN HILLS, Mich. — Volkswagen's new EuroVan, slated to debut in the United States next spring as a 1993 model, can accommodate wheelchairs, a Volkswagen United States official said last week.

Skip Redman, commercial and recreational products group manager for Volkswagen United States, said the EuroVan can accommodate most vehicle lifts without vehicle modification.

briefly

NSX gets rain on its parade

Last fall, dealers were clamoring for more **Acura** NSX sports cars and consumers were paying up to $40,000 above the $60,000 sticker. This year, demand has softened and dealers have traded NSXs with other dealers and brokers. Now, the last 150 of the 1991 models are being treated at two U.S. ports for acid rain damage. Acura says it is fixing several a day. Acura has extended the paint warranty on these cars from three years/36,000 miles to five years/50,000 miles.

LEAN TEAM — The **Dodge** Viper has something in common with McDonald's McLean Deluxe burger. Both are named Products of the Year in the Dec. 2 issue of *Fortune*. Viper wins not because it is snazzy. The kudos go to Viper because **Chrysler Corp.** produced the car in 36 months — just like the Japanese. And the $50,000 Viper was brought to market by an 85-person development team and only a $70 million investment. The Viper is the only vehicle singled out in the list of products.

WHO'S NEXT? — Thomas Gibson, president of **Subaru of America,** jokingly told the International Motor Press Association in New York that the ad agency for **Ford Division** better watch out. "I'm your speaker today, and I just went through an ad agency review. Your October speaker was from **Mercedes-Benz,** and they announced yesterday they're reviewing their account. I just heard your next month's speaker is from Ford. That has struck terror in the hearts of J. Walter Thompson."

Gibson: notices a trend

GETTING NAILED — In conversation at the same luncheon, Gibson said he feels the U.S. government is going out of its way to pick on Japanese sales leader **Toyota Motor Sales U.S.A.,** which is the subject of inquiries into alleged minivan dumping, avoiding import quotas and a host of other accusations. "I think they're targeting Toyota," Gibson said. "Which is not to say I'm volunteering Subaru to take the heat." Toyota's situation fulfills a Japanese proverb that says, "The nail that sticks up gets hit." It's sort of the opposite of "the squeaky wheel gets the grease."

FORD HELPS TOO — A sagging economy and poor car sales can't deter **Ford Motor Co.** from doing its civic duty. Ford and its dealers in the San Francisco Bay Area are offering assistance to victims of the recent fire in Oakland and Berkeley, Calif. Assistance includes donation of trucks and vans for use by community organizations in clean up activities, special reduced prices on all Ford and Lincoln-Mercury vehicles with six months' free interest, and a $50,000 donation to the Bay Area Chapter of the American Red Cross to assist in future disaster relief efforts.

PROCRASTINATED PROGNOSIS — So when will this recession finally end? We received a postcard last week from an economic development agency in Michigan. It said: " 'The Automotive Recovery?: A Seminar for Automotive Suppliers,' scheduled for Thursday, Nov. 14, 1991, has been POSTPONED *UNTIL FURTHER NOTICE!*"

Rover to switch to 'build to order'

Buyers would get cars within 2 days

VAUGHAN FREEMAN
Special Correspondent

LONDON — Britain's Rover Group said last week that it is adopting a "build-to-order" sales and production system that will deliver new cars from the production line to the buyer within 48 hours of ordering.

The system, which Rover said will be fully in place within three years, is expected to save millions of dollars a year by eliminating expensive factory and dealer inventories.

The plan is part of a massive shake-up of Rover's entire production and distribution system. Chairman George Simpson has ordered a 30 percent gain in productivity in those areas by 1994.

Rover, the last British-owned volume carmaker, sold 300,000 cars in its home market last year through about 720 dealers.

"The new system will signal a significant change for the better for the dealer, who will save on storage costs" and the interest cost of carrying inventory, said John Parkinson, Rover sales director.

Rover said the changeover will begin this month with the debut of its all-new, flagship 800 series.

Henceforth, dealers will stock only demonstrators while production is shipped to a main storage area in central England. Dealers will then place purchase orders to the central pool, which will stock only "core" models of the 800 — those known to represent 90 percent of sales.

Delivery will be made from the pool within four days of ordering, Rover said. Special orders — cars not in inventory — will require eight weeks for delivery.

But Rover said it will "drastically" reduce those lead times for the 800 next year, when the system will be extended to the entire range. By 1994 the change to a 48-hour "build-to-order" will be completed, the company said.

"The goal is for the customer to walk in, order a car, have it built precisely to his or her wishes, and drive it out of the showroom 48 hours later," said Kevin Morley, Rover managing director.

Rover, which is 20 percent owned by Honda Motor Co., has moved aggressively in recent months to adopt Japanese-style "lean" manufacturing principles. Simpson has dispatched teams of his managers to Japanese car plants worldwide — and to food-processing plants — to study production methods. ■

VW wants volunteers for cuts

ARLENA SAWYERS
Staff Reporter

Volkswagen of America Inc. wants some of its employees to resign.

In September, the U.S. subsidiary of Germany's Volkswagen AG announced that it will reduce its staff by 150 employees by March 31, 1992, using attrition and layoffs if necessary. VWoA had 1,745 employees on Aug. 31.

A letter dated Nov. 6 and signed by Guy Mollet, VWoA executive director of human resources, reiterated the company's position that a reduction is necessary. The letter said VWoA "has decided to consider requests from employees who, due to personal and/or other career interests, may wish to apply for voluntary separation."

A spokesman acknowledged that the company is offering "voluntary separation" to employees, but declined further comment, saying the matter was internal.

According to the letter, requests were due Nov. 15. Employees requesting to leave the company will be notified of the company's decision by Nov. 26.

VWoA had 1,729 employees in the United States as of Oct. 31, slightly fewer than the 1,745 it had Aug. 31.

VWoA is responsible for importing and marketing Volkswagen and Audi vehicles in the United States. ■

Seat solicits workers in Nissan's backyard

VAUGHAN FREEMAN
Special Correspondent

LONDON — Seat, the Spanish carmaker, is wooing Nissan Motor Co.'s skilled British workers in a bid to fill some of the 5,000 new jobs it will have when it opens a big new plant in 1993.

Seat, a wholly owned unit of Volkswagen Group, placed a full-page advertisement last week in a newspaper in northeast England where Nissan's Sunderland assembly plant is located.

The ad seeks supervisory-level staff in such fields as production, engineering, quality control and parts development — all hard-to-replace positions that require years of training.

"We are looking for high-caliber, experienced and dynamic persons interested in developing their professional careers in the European automobile sector," the ad read. It offered "comprehensive" salary and relocation packages, and Spanish and German lessons "where necessary."

According to Enrique Zorzano, Seat communications director, the company logged "dozens" of phone calls from potential applicants in Britain within hours of the ad's appearance.

Such international advertising is not uncommon in the European Community, where workers are able to move freely from country to country. But it is believed to be one of the first cases where one company has so closely targeted the work force of another.

Nissan is not amused.

"It is a very hostile approach; very impolite," said Nissan spokesman Hideaki Hirano last week. "We have been very generous to Volkswagen," he said, referring to several visits by VW/Seat executives to the plant.

The Sunderland plant, which employs 3,000, has a Europe-wide reputation for placid labor relations and high standards of quality and productivity. The plant produces 124,000 Primera sedans a year, 90 percent of which are exported. Annual production is scheduled to rise to 224,000 units by 1993, and Nissan expects to add 1,000 workers by then. ■

Blast from the past

The El Camino, a cross between a car and a pickup truck, returns as a concept vehicle at January's 1992 North American International Auto Show in Detroit. The vehicle is based on the Chevrolet Lumina Z34. Also planned for the show is a convertible concept based on the 1992 Cadillac Eldorado. Both were designed by ASC Inc. in Southgate, Mich.

Sales of U.S. cars lowest since 1958

JIM HENRY
Staff Reporter

Inventories increase > 44

NEW YORK — The industry sales rate fell 12.2 percent in the first 10 days of November, and sales of U.S.-built cars were the lowest for the period since 1958.

The numbers "are not the stuff of which recoveries are made," said Tom Webb, chief economist for the National Automobile Dealers Association.

In a further sign of sluggishness, total inventory of cars and light trucks swelled to a 75-day supply on Nov. 1, from 58 days a month earlier.

The daily selling rate for cars was 13.0 percent behind last year. Light trucks were off 10.7 percent.

U.S. dealers sold 231,633 cars and trucks during eight selling days in the 1991 period. They sold 296,801 in a relatively strong nine-day period last year. Year-to-year percentage comparisons for the 10-day period have been adjusted on a daily-selling rate basis in this story, unless otherwise noted.

The 116,901 domestic cars sold was the lowest total for early November since 1958, when 93,919 were sold.

Chrysler's light-truck sales rose nearly 16 percent in early November, but car sales dropped more than 20 percent. *Automotive News* estimates 10-day sales for Chrysler and for most imports.

Jeep sales crept up 3.0 percent for the 10 days. But Chrysler said that unless demand picks up, it plans to lay off 620 workers in January at its Toledo, Ohio, plant, which makes the Jeep Cherokee. Export demand for Cherokee has helped keep the plant going, but as of Nov. 1 Jeep reported a 105-day supply of Cherokees and at least a 100-day stock of its other models.

Ten-day sales declined 12.9 percent at General Motors, with trucks down more than cars.

One exception was Cadillac, which has introduced redesigned Eldorado and Seville models for 1992. Early-November sales rose 29.4 percent.

Cadillac was down 19.6 percent through October.

Elsewhere at GM, the supply of Chevrolet pickups mushroomed from 46 days on Oct. 1 to 110 days Nov. 1, following a model-year-end sales race with Ford that briefly depleted stocks.

Similarly, Ford pickups jumped from a 32-day supply a month earlier to 96 days.

Ford Motor Co.'s 10-day sales were off 16.7 percent, the worst year-to-year comparison of the Big 3. Ford's cars were down more than its trucks.

Sales for American Honda Motor Co. Inc. dipped 23.6 percent, despite a 17.3 percent rise at Acura. Honda cars fell 29.7 percent.

Sales declined 16.0 percent for Toyota Motor Sales U.S.A. Inc., despite a 2.1 percent increase for Lexus. Toyota continues to have what looks like a "just-in-time" supply of cars, at 26 days as of Nov. 1, down from 31 days a month earlier. ■

Strong Galant sales surprise Mitsubishi

LINDSAY CHAPPELL
Staff Reporter

Sales of Galant sedans are surprising Mitsubishi Motor Sales of America Inc.

In October, the company sold 4,453 Galants, compared with 2,367 in October 1990 — twice the rate it forecasted.

The company is now projecting 1992-model sales of 30,000 units, up from the originally planned 22,000 vehicles.

"We don't know just what to make of it," says Rick Lepley, Mitsubishi's vice president of sales. "Our dealers alerted us to it. We're analyzing it now."

True, the Galant carried dealer incentives ranging from $300 to $2,100 through Oct. 31. But the company has another theory. One of the Galant's chief import competitors, the 1992 Toyota Camry, has gotten bigger, just as the Honda Accord did two years ago.

"Everybody's moving up and getting bigger," Lepley says of the competition. "Maybe it's creating a void in the market for a slightly smaller sedan than everybody thinks."

Mitsubishi import car sales were up 47 percent in October, while total Mitsubishi vehicle sales, import and U.S.-built, rose 27.5 percent.

Mitsubishi gained more than 3,200 sales from three imported nameplates it did not offer a year ago: Diamante, Expo and Expo LRV.

Mitsubishi's increasing import sales are running against the trend of car imports in general, which decreased 6.0 percent in October and are off 14.0 percent for the calendar year. **AN**

Subaru ads will stress price cuts

ARLENA SAWYERS
Staff Reporter

Subaru of America Inc. kicked off a new "Value-Plus" marketing campaign last weekend, highlighting 1992 Legacy models. The ads will vary by regions.

Fueling the campaign is Subaru's decision to take money earmarked for rebates to pay for additional options, thus reducing the prices of the Legacy L and L Plus sedans and wagons $520 to $1,420 below their 1991 counterparts.

A $500 consumer rebate is built into the price of the 1992 L and L Plus models, but there are no dealer incentives on Legacys. Prices of the 1992 Legacy LS and LSi models rose $675 to $975.

Chris Wackman, vice president of marketing at Subaru, said research shows that consumers are confused about rebates that are changing constantly.

The idea behind the Subaru campaign, said Wackman, is to tell consumers the price of the car and let them know the Legacy is a better value than comparably equipped cars in its segment.

"They feel they're being flimflammed," said Wackman. "If a company touts an incentive, consumers wonder if they're buying too late or too early — two weeks from now the incentive gets better.

"We're saying, 'Listen, we don't have huge advertising dollars and can't compete head-to-head incentive-wise. We're going to throw (incentives) into the price of the car and provide value. We're saying this is the price of the car and the price won't change.' "

The $12,999 price of the 1992 L Plus four-door sedan is $1,420 less than the price of the comparable 1991 model.

The Value-Plus package, which is standard equipment on the L Plus, consists of power windows, power locks, an upgraded stereo system and air conditioning.

Subaru conducted a similar program with the Loyale in the 1991 model year. The car was loaded with air conditioning, a stereo cassette player, power door locks and power windows. The package had been a $1,745 option but added only $300 to the price of the car.

Loyale sales in the 1991 model year rose 69 percent over 1990.

Dealers are receptive to the "Value-Plus" price structure, Wackman said.

"We feel this is the way we should be going," he said. "We felt we had to give it a shot."

The new campaign, created by Wieden & Kennedy of New York, is comparative but not mean-spirited, Wackman said.

The campaign is devoted primarily to TV and radio, with some newspaper. **AN**

Canada new vehicle sales tumble 9.6% in October

ANNE E. WRIGHT
and JEREMY SINEK
Automotive News

Light-vehicle sales in Canada dropped 9.6 percent in October, with the drop split about evenly between cars and trucks.

But the performance among automakers varied widely. General Motors' decline of 14,260 car and truck sales in itself was more than the 9,991-unit drop recorded by the industry as a whole.

The October figures were released against a backdrop of conflicting economic indicators as to the extent, or even the existence, of a recovery. Before October, the industry had shown gains in five of the six previous months.

Year-to-date car sales remain behind 1990 by 1.2 percent, and trucks by 4.8 percent.

Chrysler was the only one of the Big 3 to post gains in both cars and trucks in Canada in October, and it remains the only Big 3 maker ahead for the year. Its monthly car volume was up 1.4 percent, trucks rose 20.13 percent.

Ford's car sales rose slightly, but trucks slipped 11.7 percent.

Cars were down 37.8 percent and trucks were off 32.1 percent for General Motors.

GM's problems included limited or delayed availability of many 1992 models, and customer confusion caused by a new distribution network for GM's captive imports.

The former Passport franchise has changed to Saturn-Saab-Isuzu Trucks, and Geo has been introduced to Chevrolet dealers.

One bright spot for GM was Saturn, which made its Canadian debut Oct. 3. The new nameplate sold 837 units. Total Saturn-Saab-Suzuki sales of 1,123 represented a 41.6 percent increase over Passport sales for the year-ago month.

Nine importers reported gains during the month. Among them, Mazda was up 13.6 percent, Nissan rose 30.8 percent, Suzuki gained 25.9 percent and Toyota was up 29.6 percent.

Story on sales staff exodus made the readers write

Letters place blame and offer solutions

"Half the sales staff is quitting," a Page One report in the Sept. 16 issue, brought more letters from readers than any other article *Automotive News* has published in several years.

Most of the respondents blamed dealers or dealership policies for the exodus, but some placed the onus on the salespersons themselves. Others said the automakers are responsible for the departures, and still others offered solutions.

Several of the replies appeared in the Letters section of *Automotive News;* some were not printed because of space limitations.

Following is a summary of the letters received.

Robert Curlender, a retired Buick salesman in Pasadena, Calif., said it is a two-way street: "Just in case we want to jump on the dealers, it should be remembered that the factories are equally to blame. They have been so engrossed with product and dealer relations that they have forgotten the conduit to their revenue."

Donald Billick of Phoenix said, "The manufacturers do not recognize anyone in the dealership as important except the dealer principal. The automakers are still a day late and a dollar short and are driving full-speed in reverse."

Salesman Ron Granitz of Charlottesville, Va., mentioned low pay and long hours and added, "We try to sell overpriced vehicles made by people who draw wages even when not working and who are led by management who couldn't sell what they are in charge of."

Karl F. Snyder of Frederick Briggs Associates in Andover, N.J., urged better training.

"The dealer principal and his senior management staff have not been trained or developed as true motivators, leaders or managers of the people that do the real work for the store," Snyder said.

And from Owen R. Smith of O.R. Smith & Associates in Milwaukie, Ore.: "The average dealership and the industry lack the basic management skills to hold, build and maintain a professional team."

Mark W. Smith of The Professional Edge in Summerville, S.C., said, "I would begin with training for both management and sales staff. Second, a screening process to eliminate undesirable individuals. Third, a restructuring of the pay system."

Richard Williams of Bellevue, Wash., observed, "The industry is putting great emphasis on total quality in production. The manufacturers would be better served if they would spend their money helping dealerships develop and implement selling systems that focus on true customer satisfaction."

SOCKING THE DEALER

Dealers took their lumps from many respondents. Stanley Warrick of Richmond, Va., asked, "In what other industry can a salesman sell a $20,000 product and make a minimum $50 commission? And that is before taxes! Auto dealers were paying $50 minimum commissions in the 1950s."

Robert G. Goodman of Asheville (N.C.) Vehicle Leasing Co., recalled working for a dealer who had an excellent pay plan and provided many other benefits for salespersons. "He cut commissions, did away with demos, and his sales dropped from more than 200 a month to less than 50," Goodman said.

Gary Childs of Friendswood, Texas, and others teed off on a dealer who criticized salesmen in the *Automotive News* article.

"Having spent 22 years as a salesman or sales manager, I can tell you that you cannot make a living selling automobiles if you sit around and do nothing," Childs wrote. "The professional salesman knows that floor traffic provides only the extras. The everyday expenses of raising a family and providing a fine home come from constantly digging up that old customer or new referral."

Lee Ames of The Moran Group in Fort Worth, Texas, said, "A little security could go a long way to promote productivity. Salespersons have to carry their weight, but they're the ones who get the job done and help Mr. Dealer *be* Mr. Dealer."

5 SIMPLE BENEFITS

From Fayetteville, Ark., Bill D. Frailey of Goff-McNair Lincoln-Mercury wrote: "I wonder how long it is going to take for 90 percent of the dealers to discover what the other 10 percent have known all along. The auto recession has been caused by greedy management, by hiring inexperienced sales personnel, adding longer hours and taking away the demo, insurance and hospitalization."

Steve Amster, a 20-year salesman who now is with Lexus of Monmouth in Ocean, N.J., said, "If you want to retain quality salespeople, you have to treat them properly. I consider myself a professional and expect to be treated like one."

Rob Mancuso of Western Diversified Services in Deerfield, Ill., asked, "How hard would it be to attract personnel if dealerships offered these simple benefits, many of which are 'givens' in any other industry?" Mancuso's benefits are a "40-hour work week, salaried compensation, five nights off, pension plan, training."

OLD-TIMERS CAN HELP

Jeff Hall of Marietta, Ohio, a seven-year salesman, said the most important assets of any successful dealership are satisfied customers and satisfied employees. "I can't count the number of customers who come to see their salesman about a small problem, only to be told that the salesman has 'moved on.' Salesmen don't move on; they leave!"

Salesman Christopher Laurenzi of Boonton, N.J., commented on reducing costs by cutting salespersons' benefits and concluded: "In this business, I've noticed that 'the pennies we save today become the dollars we'll lose tomorrow.' "

Richard S. Leach of Redwood Shores, Calif., described himself as semi-retired, 69 years old and a 43-year veteran of the auto business. He suggested that the old-timers can help.

Leach concluded, plaintively, "I would be pleased to talk with anyone about these ideas, if you know of anyone who would listen."

E.L. Gray, a Chevrolet salesman in Tulsa, Okla., summed up the situation this way: "Our families are hurt, our benefits are none, and the divorce rate and salesman turnover are terrible. Simply put, the dealers and manufacturers don't care."

Some respondents had scant sympathy for the salesmen. Steven Moskowitz, president of Classic Oldsmobile-Honda in Merrillville, Ind., said, "I'm a little tired of reading letters from salesmen about how uncaring dealers are about their sales staffs.

"I must ask these complaining salespersons: Do you come to work on time? Are you dependable? Do you stay up on product knowledge? Do you constantly work to improve your selling skills? Do you prospect? Are you truly a professional salesperson?"

Freddi Silverman, president of BN Group in Succasunna, N.J., penned a reply to Stanley Warrick, who spoke of a $50 minimum commission on a $20,000 product. Said Silverman:

"People want to be comfortable with one of the most expensive purchases in their lives. They want to believe that the salesperson believes in himself and his dealership, and they don't want to be looked at as a dollar sign. In any sales job, it is up the person doing the selling — no one else."

ANSWERING A DROPOUT

Dell James, a salesman at Garber Ford-Mercury in Green Cove Springs, Fla., said. "I think salespeople should wake up and smell the money. I do surveys door to door. I am constantly on the phone. It's no longer 1986, boys. Get off your duff. Do it the old-fashioned way: Earn it."

Sanford Block of Bloomfield, N.J., wrote that he and five friends entered auto sales after college. They quit after six years because of low pay, long hours and "abuse." He said all are now doing well in other businesses.

Block's letter did not sit well with some readers. Bill Buchanan of Graham, N.C., asked, "If you took the abuse you wrote of and worked under the conditions you stated, why did you stay six years?"

John Gasper of Commonwealth Dodge in Louisville, Ky., added, "I feel sorry that they spent 60 hours a week to make $14,000 a year, but the auto industry historically has paid salesmen on productivity rather than time on the job."

Said Beckie Endebrock, sales manager of Beck & Mastin Pontiac-GMC-Daihatsu in Houston: "I don't think the real salespeople are leaving the business. The ones leaving are the ones who want something for nothing."

Preston Burtis Jr. of Burtis Motor Co. (Ford-Lincoln-Mercury-Dodge-Chrysler-Plymouth) in Garden City, Kan., cited his experience as a 40-year dealer and his company's compensation program in replying to Block.

"Our salespeople stay with us for years as they are essentially independent business people and totally loyal," Burtis said.

"Our dealership is 79 years old and has never had a red year and only five or six red months out of 948 months," he added.

"If we are giving away the store, our salespeople are returning it each month."

Saturn leads sales per dealer in October

KAREN DETKOWSKI
Statistician

Saturn began the new model year as it ended the old one, by leading the *Automotive News* sales-per-dealer calculations.

Saturn reported October as its highest sales month so far, and dealers of the year-old brand sold six more units per outlet than they did in September.

Toyota, which last led the pack in August, had its best October ever and gained 13 car-truck sales per dealer over September.

It was the only full-line brand in the top five. Saturn, Lexus, Honda and Acura sell only a limited selection of cars.

Lexus rose to third in sales per outlet with an average of 64 units, up 14 from September.

Honda slipped from second to fourth place, and Acura climbed to fifth from eighth.

For the month, 16 of 41 franchises reported increases while 15 declined. Among the notable declines was Infiniti, which fell out of the top 10 as its average sales dropped to 23.

Among smaller-volume makes, Volvo sales improved significantly. Unit sales of 4,638 were up 34.2 percent from September, increasing Volvo's sales per dealer by three units.

The company said October sales indicated a return of business, and it predicted no dramatic increases for the remainder of the year.

October had 27 selling days; November and December each have 25 days. AN

Ford triples stock offering to $2.3 billion

CHARLES M. THOMAS
Staff Reporter

Ford Motor Co. has sold 46 million shares of its special preferred stock for $2.3 billion, three times the amount of the original offering.

Although it's a good deal for investors who snapped up the stock quickly at $50 a share, it points up just how laden with debt the company is.

Ford's debt to capital ratio was about 43 percent on Sept. 30, up from 32 percent last Dec. 31.

Analysts say Ford needs the cash for its heavy capital spending program, which is pegged at more than $26 billion through 1995.

"Ford's debt is piling up," said Jean-Claude Gruet, analyst with UBS Securities Inc. in New York. "The company underspent on capital expenditures in the 1980s and is forced to overspend in a recession."

But he said the infusion of cash will short-circuit any more downgrades in the company's credit rating.

Said Ford about the offering, "We're delighted with the transaction."

Ford conceded in the prospectus it filed with the U.S. Securities and Exchange Commission that, in all likelihood, it will lose money in the fourth quarter.

The company blamed competition and industrywide overcapacity for the anticipated loss. For the first nine months of this year, the company reported a loss of $1.8 billion.

Whether Ford will reverse that trend next year depends on a rebound in North American car sales. The company also will have to stanch losses in Great Britain — slowly recovering from an 18-month recession — and at its subsidiary Jaguar Cars Ltd., according to Gruet.

By bringing new equity into the company rather than borrowing money, Ford joins other companies, including General Motors and Chrysler Corp., that have turned to equity markets rather than lending institutions for cash.

In May, GM raised about $600 million by selling 16.1 million shares of a special convertible preference stock. And last month, Chrysler raised about $395 million with a stock offering. AN

Groups propose new rules for re-use of used motor oil

MAX GATES
Staff Reporter

WASHINGTON — Supporters of a proposal to tighten restrictions on the re-use of used oil say their bill could remove some potential liability from auto dealerships that accept used motor oil.

"Our proposal would provide certainty about who is responsible for used oil, and it would be the transporters and the refineries," said Daniel Weiss of the Sierra Club, one of the backers of the proposal. "That takes the risk away from service stations, auto dealerships, supermarkets and others who accept used oil."

The proposal, backed by a coalition of environmental groups and the Hazardous Waste Treatment Council, is aimed primarily at reducing the health risks from burning used oil.

A study released by the group last week indicated that used oil can contain high levels of lead. More than 780 million gallons of used oil are burned for fuel each year, often in schools, apartment buildings, offices and factories.

While the used oil is mixed with virgin oil to lower the concentration of lead, dilution does not lower the amount of lead that is released into the air through burning, the study said.

Lead is known to be particularly toxic to children, where it can cause brain and nerve damage and other disorders. In addition, untreated used oil also contains other toxic metals, such as chromium, cadmium, arsenic and nickel, which have been linked to about 3,400 cancer deaths in the United States each year.

Reps. Cardiss Collins, D-Ill., and Dennis Hastert, R-Ill., said they plan to introduce legislation that would make it easier for auto service facilities to serve as collection centers and would require the treatment of used oil to remove lead before it is burned.

Their bill would classify used oil as a hazardous substance, but only after it has been picked up by a transporter after collection. Several bills now before Congress would prohibit the classification of used oil as a hazardous substance. Sponsors say that the classification would stigmatize used oil and thus discourage recycling.

Disposal of used oil has been a problem for auto dealers in several states.

They have been forced to pay thousands of dollars for the clean up of hazardous waste sites through the EPA's Superfund Program after sending used oil to the sites for disposal. AN

British workers mull Ford pay hike offer

LONDON — Ford Motor Co. late last week offered its 29,000 production workers in Britain a 10.25 percent pay increase over two years. But the automaker rejected union demands for a two-hour reduction in the work week, to 37 hours.

The offer, which would raise production salaries to an average £305 (about $534 at current rates) a week by next Nov. 1, was endorsed by union leaders and sent to workers for ratification.

The contract offer is Ford U.K.'s lowest in a decade.

The company lost £274 million (about $479.5 million at current rates) last year, and many analysts expect it to do worse this year amid a deep recession in British car sales.

Chrysler hikes Northeast region rebates

ARLENA SAWYERS
Staff Reporter

Chrysler Corp. is testing a new retail incentive program in its Northeast zone that puts greater emphasis on select 1991 and 1992 vehicles and drops incentives on other 1992 models.

Audi of America and Mitsubishi Motor Sales of America Inc. are contributing to the incentive activity with factory-to-dealer and/or consumer rebates.

Starting Nov. 16 in its Northeast zone, **Chrysler** boosted incentives on some small cars, mid-sized sedans, minivans and Dakota pickups by $250 to $1,000 over the amounts announced in October.

Zero percent financing is available on contracts up to 24 months; rates for longer contracts range from 1.9 percent to 9.9 percent.

Rebates and interest rates for other 1991 vehicles are unchanged in the Northeast, but incentives on 1992 vehicles not specified under the new plan were dropped.

incentive
WATCH

Chrysler's test program ends Dec. 20. Chrysler's Northeast zone includes Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, eastern Pennsylvania, Maryland, Delaware, Virginia and West Virginia.

Audi is offering a two-tiered incentive program to dealers. Dealers who ordered a factory-determined number of 1991 Series 80, 90 and V8 Quattro cars receive a higher incentive on those cars than dealers who did not order their quota.

For instance, dealers who ordered their quota of 1991 Audi 80s receive a $3,000 rebate on each car when they sell it, while other dealers receive $2,000.

Other 1991 Audi dealer rebates are: 80 Quattro, $750 and $1,500; Audi 90, $750 and $3,000; Audi 90 Quattro, $750 and $1,500; and V8 Quattro, $3,500 and $5,000.

On other 1991 models, all dealers are paid $3,500 on the 100 and $4,000 on the 200.

Audi's program expires Dec. 31.

Mitsubishi's new factory-to-dealer program covers 1990, 1991 and 1992 vehicles. The rebates range up to $2,000 and vary by region.

Some Mitsubishi incentives are flat payments, some are based on number of units sold, some are a flat fee after a dealer sells a certain number and some include bonus payments for meeting certain terms.

Mitsubishi also is offering consumer rebates of $500 on the 1990 and 1991 Precis in California and $500 to $1,500 on select 1990 and 1991 cars and trucks in Hawaii.

Mitsubishi's program ends Dec. 31. ■

LT5

Chevy may sell 375-hp motor

continued from PAGE 4

of 13 to 14 engines per day aft the introduction of the LT5 in fa 1989 on the 1990-model ZR-1.

Sales of the ZR-1 were hot immediately after the car was introduced. But demand cooled with th recession, problems with the engine and changes Chevrolet mad to the base Corvette to make it les distinct from the more expensiv ZR-1.

Chevrolet has sold 4,500 ZR-1 in the United States since the ca was introduced — 2,800 199 models and 1,700 1991 models. Th ZR-1 also is sold in Europe, Mexico and Canada.

The erosion started in the 199 model year when the $34,000 bas Corvette coupe got the sam rounded rear-end that had bee exclusive to the $65,000 ZR-1. Fo the 1992 model year, the base ca also got the new LT1 5.7-liter V- engine, which has performanc numbers only slightly lower tha the LT5.

While admitting the ZR-1's future is under review, Chevrole spokesman Ralph Kramer said h doubted whether the LT5 will b dropped soon.

"There is no question that th ZR-1 will remain in the Chev lineup through 1992 and for som years beyond that," Kramer sai "Could that change? I suppose s but I don't foresee that happening."

Kramer said the division is satisfied with the halo the ZR-1 ha produced for the whole Corvett line and is not eager to drop th car. Sales of the 1992 Corvette ar up 10 percent from the same poin in the 1991 model year, and he attributed part of increase to the luster that the ZR-1 brought to th line.

Campbell also said he was unaware of any plans to drop the ZR 1, adding that production plan given to suppliers are unchanged.

"I understand they are looking a whether it's a prudent thing to d (to continue the ZR-1), given GM' economic situation," Campbel said. "I would look at all my ca lines, especially the low-volum ones." ■

Auto trade bills near Congress

WASHINGTON — A bill addressing the United States' $3 billion automotive trade imbalanc with Japan could be introduce this week.

House Majority Leader Richar Gephardt, D-Mo., said he expect to file the bill before Congress recesses for Thanksgiving. Gephard is working with Democratic Sen Donald Riegle and Carl Levin o Michigan, who are expected to fil a companion bill. Lawmakers hav not disclosed details of their plan to help the auto industry.

Meanwhile, the chief U.S. negotiator in talks with the Japanes about the automotive trade defici said the Bush administration wi not consider trade sanctions befor next spring. The talks will continue, but the threat of sanction may be needed to persuade Japanese companies to buy more U.S parts, said Michael Farren, under secretary for international trade i the Department of Commerce.

German to purchase Excalibur Automobile

MILWAUKEE — A German grocery store developer says he will pay $1.33 million for Excalibur Automobile Corp., the bankrupt neoclassic automobile company.

Michael Timmer said he hopes to be making cars at the suburban Milwaukee plant within three months. The plant closed in June 1990.

Founded in the mid-1960s by David Stevens and William Stevens, Excalibur sold its cars for between $75,000 and $150,000 when the plant closed in 1990.

The Stevenses placed the company in bankruptcy and in 1987 it was purchased by a group led by Henry Warner. Warner filed for protection from creditors under Chapter 11 of the U.S. bankruptcy code in September 1990.

In February, Excalibur was placed under the supervision of trustee Douglas Mann. He approved Timmer's bid and Federal Judge James Shapiro authorized the sale last week.

Excalibur owed at least $7.3 million to creditors and taxing bodies, Mann said. Under terms of the purchase, few of those creditors will be paid.

Timmer's experience includes running a leather factory, a clothing store and the development of grocery stores.

Big 3 idle 13 plants this week

ANNE E. WRIGHT
Chief Statistician

Eleven Big 3 assembly plants in the United States and two in Canada are closed this week as manufacturers battle slow sales and high inventories. It is the highest number of plants idled due to poor sales since the week ended March 11, when 21 plants were down.

Ford Motor Co. tops the list with eight plants down this week. Car plants down for one week are Atlanta and Kansas City, Mo. The Wayne, Mich., and the Lorain, Ohio, car facilities will be down for two weeks. Downtime at the Dearborn, Mich., car facility was extended one week.

Ford's truck plants closed for one week are the Norfolk, Va.; Michigan Truck (Wayne); and the Kentucky Truck (Louisville) plants. The Lorain, Ohio, truck facility has been reduced to one shift this week because of a shortage of materials.

The company's Wixom, Mich., plant was closed last Tuesday following the discovery of a faulty component for the Lincoln Town Car. Production will resume when the problem is rectified.

Chrysler Corp. has idled four plants this week. The Sterling Heights, Mich., car plant and the Toledo, Ohio, and the Windsor, Ontario (Pillette Road), truck facilities will be down for two weeks. The Bramalea, Ontario, car facility is scheduled for its fifth consecutive week of downtime.

General Motors announced that the Detroit truck plant will be idle for two weeks. Production is scheduled to resume Dec. 2. The Janesville, Wis., truck plant will build no medium-duty chassis for two weeks, but output of other models will continue.

Last week's estimated U.S. car production increased 11.3 percent over the prior week and 34.8 percent over the year-ago week.

Canadian automakers' scheduled assembly was up 27.6 percent over the prior week but was down 7.0 percent from 1990.

So far this year, U.S. auto manufacturers trail their 1990 tally by 13.3 percent. Canadian auto production is off 0.2 percent.

Truck production in the United States last week was down 7.7 percent from the prior week and up 25.05 percent over the same week one year ago.

Canadian truckmakers' last week planned assembly of 18.6 percent fewer units than the prior week but 3.1 percent more than the year-ago week.

Chrysler Corp. has extended the daily overtime at the St. Louis (No. 2) minivan plant for an additional week.

Nissan Motor Manufacturing Corp. U.S.A.'s Smyrna, Tenn., plant scheduled daily overtime last week.

Toyota Motor Manufacturing Inc. U.S.A. scheduled Saturday overtime at the Georgetown, Ky., plant. ■

GM nears deal with China

Plan calls for production of 60,000 S-class trucks

STEPHEN VINES
Staff Correspondent

HONG KONG — General Motors is "close" to an agreement to start producing 60,000 light trucks a year at a joint-venture plant in China, a senior official disclosed last week.

If completed, the deal would be GM's first in China, and the first Western investment there in a light commercial-vehicle plant.

"We think we're getting pretty close to a deal," Ronald Gilchrist, executive vice president of General Motors Overseas Corp., said in Hong Kong. "We are in the final stages of negotiation."

According to Gilchrist, GM is negotiating with Jinbei Motor Co. in Shenyang, a relatively remote city near China's far eastern border with Korea. Jinbei now produces about 20,000 light-duty trucks a year from kits under license to Japan's Toyota Motor Corp. and Mitsubishi Motors Corp.

Gilchrist would not disclose the size of GM's planned investment, nor financing plans for the venture. One of the obstacles faced by joint-venture companies in China is how to convert locally produced profits into hard currency.

But he said the U.S. automaker planned to take about one-third of the equity in the new joint venture company. GM also will send its own personnel to Shenyang and provide training and technology transfers, he said.

Prior leaves Yugo . . . again

NEW YORK — Co-founder William E. Prior has resigned from his second hitch at Yugo America Inc., claiming a lack of support from the Yugoslavian parent companies.

"This is in no way a no-confidence vote on my part for the company or for the marketing and business plan," Prior said. "It's more on a personal account."

Prior quit as chief operating officer effective Nov. 8, but was still on board last week, handing the company over to Ilia Pavlovic, a Yugo America board member. Yugo is owned by manufacturer Zavodi Crvena Zastava and Genex, a trading conglomerate.

Prior returned to Yugo America last April, after being ousted 2½ years earlier by investors who bought out co-founder Malcolm Bricklin. Three months later, Yugo filed for Chapter 11 bankruptcy, and Zastava took control.

Sales have improved since May, but 10-month sales totaled 2,461, down 56.1 percent from last year.

Headquarters for U.S. Toyota?

NEW YORK — Toyota Motor Corp. could someday unite all its U.S. operations — manufacturing, design, technical, financial and corporate — in a single, U.S.-based organization.

And it wouldn't necessarily have its headquarters in California, where Toyota Motor Sales U.S.A. Inc. is currently based.

"Some people think we should put it in California,

"We're strong in the skinny parts of the market and weak in the fat parts," says Earl Hesterberg, Nissan Division's new U.S. boss.

U.S. parts makers voice skepticism about Japan's increased purchases

RICHARD JOHNSON
Staff Reporter

TOKYO — The announced plans of Japanese automakers to double their total parts purchases in the United States by 1994-95 mask several important deficiencies behind the large numbers, according to analysts and U.S. component suppliers in Tokyo.

In recent days, the six major Japanese carmakers have announced U.S. parts purchase goals for the 1994 fiscal year of $16.78 billion, a target that includes both buying for transplants and imports to Japan.

The six are Toyota, Nissan, Honda, Mazda, Mitsubishi and Fuji Heavy Industries (Subaru).

That compares with stated spending of $8.66 billion by those six companies in the 1990 fiscal year that ended last March, a year in which they sold more than $40 billion worth of new cars and trucks in the United States.

American parts manufacturers here and in the United States say the Japanese-government-orchestrated plan will not significantly increase imports of U.S. components to Japan, thus doing little to narrow the $10.5 billion U.S. auto parts deficit with Japan.

At the same time, they say, it is unlikely that all of the increased spending by Japan's transplants in the United States will go to wholly owned American companies, if only because of the time it normally takes to bring a new supplier into a production cycle.

The carmakers' spending plans do not break out how much of the

Chrysler's a winner with Gold Key Plus

Lease-buy program cuts trading cycle

MARY CONNELLY
Staff Reporter

SOUTHFIELD, Mich. — An owner of a 1988 Jeep Cherokee stopped to shop recently at Dick Bournival's Jeep-Eagle dealership in Portsmouth, N.H. When the customer left, he was driving a 1992 Jeep Cherokee Laredo for $247 a month for two years and had pocketed a $5,000 check.

The customer was satisfied, and Bournival was exultant.

"I've died and gone to car dealer heaven," Bournival exclaimed. "Now I have a customer who needs a car in two years and I have a 30,000-mile Cherokee to trade. I'm shooting fish in a barrel."

Chrysler Corp.'s Gold Key Plus financing program is the reason for Bournival's enthusiasm.

Gold Key Plus is a heavily advertised program that offers the lower monthly payments of leasing but allows customers to retain the vehicle title. Its greater-than-anticipated market success has startled dealers and Chrysler executives since it began Oct. 1.

Under the program, customers make a minimum down payment of 5 percent, and Chrysler sets a residual value for the end of a 24-to-48-month contract cycle.

"A true test of the program was the credit approval ratio," says Roger Meline, Chrysler Credit vice president. "The approval ratio through Nov. 15 is 85 percent."

At the end of the Gold Key Plus contract the consumer can: return the vehicle, refinance it for the same monthly payment, pay off the fixed value and keep it or sell it and pay off the fixed value amount.

Nissan lines up 'musts' for comeback

Sedans, quality, dealers top the list

KRISTINE STIVEN BREESE
Staff Reporter

LOS ANGELES — When it asked 4,543 U.S. consumers to compare Japanese brands last winter, Nissan Motor Corp. in U.S.A. found few surprises.

Toyota topped the "dependable" list.

Honda had the best quality and resale value.

Nissan, consumers said, was known for being fast.

That Nissan had an image at all might have provided some comfort at the company's U.S. headquarters. For much of the past decade, Nissan has struggled to make its name known after dropping the Datsun badge in 1982.

But the reputation as a performance brand is also weighing Nissan down as it tries to regain its stride in the United States. Speed simply has too limited an appeal for a division seeking to broaden its following in the sales mainstream.

"We're strong in the skinny parts of the market and weak in the fat parts," sums up 37-year-old Earl Hesterberg, Nissan Division's new head.

His boss in Japan, Nissan Motor Co. Ltd. President Yutaka Kume, describes the U.S. division as being on a "landing between two flights of stairs."

The next flight, in Nissan's view, will boost the make closer to the top of a U.S. import industry now led by Honda and Toyota. The company says Nissan will be known more for quality and sedans than for performance and coupes. And its U.S. dealers, like those at its sister division, Infiniti, will rank among the industry's leaders in pleasing customers.

The challenge is a heady one for Hesterberg, who took over as company vice president and division general manager on Oct. 1. He joined Nissan from Ford Motor Co. in 1982 and has been Infiniti's No. 2 man for 18 months.

His plate for the first year will be full. Two critical products, the new Quest minivan and a replacement for the Stanza, arrive next summer.

In the meantime, Nissan is trying to restructure the way its

Hotter Taurus

The front end design on this Taurus test mule shows styling changes being considered for the 1995 model year. Engine compartment temperatures would rise, as the front end is nearly enclosed. Air is provided by a wide, narrow scoop under the bumper. Ford Motor Co. has been telling suppliers to upgrade temperature resistance of future engine compartment materials. According to one source, the automaker expects compartment temperatures to run 25 degrees Fahrenheit higher in some of its mid-1990s vehicles. What isn't clear from this photo is where the head lamps and parking lamps would be placed.

Curry successor under debate

WASHINGTON — Two names have surfaced as potential successors to Jerry Curry at the National Highway Traffic Safety Administration.

They are Kate Moore, currently assistant secretary for budget and programs at the Department of Transportation, and Edward Emmett, a member of the U.S. Interstate Commerce Commission since 1989.

Curry, who has run NHTSA since 1989, was nominated by President Bush Friday to take the top job at the Federal Aviation Administration. FAA Administrator James Busey was earlier nominated to be deputy secretary of the Department of Transportation.

Montero priced below Explorer

CYPRESS, Calif. — Mitsubishi Motor Sales of America Inc. has priced its new Montero four-wheel-drive four-door sport-utility below the industry-leading Ford Explorer.

The 1992 Monteros, now being delivered to dealers, start at $17,929 for the base version. The RS is $19,599. Automatic transmission is available on each for about $800. The Montero SR is $22,429, and the LS is $23,019. Automatic transmission is standard on both.

Prices of 4wd four-door Explorers range from $18,805 to $23,553. Automatic transmission is $890 extra.

Mazda profits plummet 60.6%

TOKYO — Battered by sales declines in the United States and Japan, Mazda Motor Corp.'s net profits plunged 60.6 percent in the six-month period ending Sept. 30.

Mazda blamed lower profits in the first half of the current fiscal year on weak passenger-car markets, rising labor and material costs and the strengthening of the yen.

Sales in Japan were off 10.4 percent to 279,028 units. Overseas sales were off 2.2 percent to 409,923.

Mazda has lowered its unit sales forecast for the fiscal year to 1.44 million units, 1 percent lower than an earlier estimate, although it expects revenues to increase.

Net profits fell to 4.26 billion yen ($32.8 million) during the first half, down from 10.8 billion yen ($83 million) in the same period last year. Operating income was off 49.4 percent to 11.04 billion yen ($84.5 million).

For its full year through March 1992, Mazda forecasts net profits of 13 billion yen ($100 million), a decline of 51.9 percent.

— Richard Johnson

Volvo loses $256.2 million

Volvo Cars said passenger-car operations for the first nine months of 1991 lost the equivalent of $256.2 million, nearly twice the loss for all of 1990.

Sales declined 13 percent in third quarter and were off 12 percent to $4.5 billion for nine months.

Volvo said in the first nine months, it delivered 238,100 cars, 16 percent fewer than last year.

— Diana T. Kurylko

Chrysler calls back workers

TOLEDO, Ohio — Laid-off workers at Chrysler Corp.'s Toledo assembly plant will be called back to fill about 850 hourly jobs added for production of the Jeep Wrangler and the right-hand-drive Jeep Cherokee.

Approximately 100 hourly workers will start at Toledo in February to prepare for Jeep Wrangler production with an additional 700 joining them in June. Production of a right-hand-drive Jeep Cherokee could create an additional 50 new jobs.

Production of the Jeep Wrangler in Brampton, Ontario, will end in April with that work force folding into the nearby Bramalea plant. The 1993 Dodge Intrepid, Eagle Vision and Chrysler Concorde sedans will be produced at Bramalea next summer.

Ford puts 5/50 on fuel pumps

DEARBORN, Mich. -- Ford Motor Co. is voluntarily providing owners of 1988 and 1989 Tempo and Topaz vehicles with extended warranty coverage on the fuel pumps. The new coverage is five years/50,000 miles from the original warranty start date, or through Aug. 31, 1992, whichever provides greater coverage.

An internal seal on the fuel pump may wear prematurely. This could cause difficulty in restarting a warm engine or excessive fuel pump noise.

Owners who have had the fuel pumps repaired or replaced will be reimbursed.

briefly

A lift for Kia via Hyundai

Greg Warner, former top executive at **Hyundai Motor America,** is helping **Kia Motors Corp.** plan its 1993-94 entry into the U.S. market. Warner, who was on the original Hyundai team in the mid-1980s, says he is helping Kia draw up a business plan. Is he ready to lead a Korean importer again? On that question, Warner's lips are sealed.

HELPING DEALERS MANAGE — Ford Motor Credit Co. wants to do more to help **Ford** and **Lincoln-Mercury** dealers during these tough economic times. The credit company has published a new magazine called *Strategy*, with a goal to help dealers hone their management skills. Articles range from target marketing to renovation and expansion costs. Ford Credit spokesman Jim Bright says the magazine will be published annually or semiannually, depending on the response from dealers.

BRAND LOYALTY — When salespersons at Countryside Motors (Ford-Chrysler-Plymouth-Dodge) in Lawrenceburg, Ky., see Sherman Searcy coming, they know they are going to make a sale that day. The 84-year-old retired farmer is now driving his 14th car from that dealership — the 58th consecutive **Chrysler** he's purchased.

Kelly: glass is half empty

HALF THE REAL THING — William Kelly, president of **Saab Cars USA,** showed up for a soiree last week at **General Motors** offices in New York hosted by GM Chairman Robert Stempel. You may recall GM of Europe owns half of Kelly's parent company, Saab Automobiles AB. "I'm glad they invited me," Kelly said. "But every time they see this," he said, pointing to his lapel pin, "they only give me half a glass of Coke."

LUXURY LINER — U.S. **Mazda** dealers are still waiting for their ship to come in. Seems Typhoon Mireille slammed into two loading docks at the Hiroshima, Japan, port where Mazda was planning to load shipments of the new 929 luxury sedan. The nasty weather made the docks unusable and damaged 100 cars that were parked nearby waiting to be loaded onto U.S.-bound ships.

PLUGGED-IN SHOW — Electric cars are usually a vision of the future when they appear at auto shows, but at the Seattle International Auto Show, they were a product of the present. Steven Lough, a **GMC** dealer, persuaded the promoter to include electric vehicles this year. Ten converters and short-run makers brought their wares, and the exhibit was credited with pushing attendance up 20 percent over last year, to 152,909. The real coup: a converted Escort and a converted MG Midget were sold off the floor.

AC-CEN-TU-ATE THE POSITIVE — Range Rover of North America got tired of its dealers and salespersons getting depressed by doom-and-gloom news, so the company started *The Good News Letter*, a weekly internal publication where never is heard a discouraging word.

trucks

General Motors objected, but Daewoo Group's shipbuilding unit is making this Damas minivan, other trucks, and minicars.

Daewoo Shipbuilding adds minitrucks to line

OLES GADACZ
Staff Correspondent

SEOUL — South Korea's Daewoo Shipbuilding and Heavy Machinery Ltd., long accustomed to launching 300,000-ton supertankers from the world's biggest drydock, last week launched a new line of 1,300-pound minitrucks.

The new Damas and Labo truck models are powered by 796-cc gasoline engines. The Labo is a pickup truck version, and the Damas models are commercial and seven-passenger minivans. Vehicles will retail for the equivalent of $4,800 to $6,500, depending on configuration and equipment, Daewoo said.

The company, a unit of the huge Daewoo Group, last June introduced South Korea's first minicar, the Tico, based on the Suzuki Alto. To date, about 20,000 Tico vehicles have been sold, although annual capacity exists for 135,000.

"We expect the minivans and trucks will be quite popular with small retailers and distributors, as well as in Korea's many farming and fishing villages," said Choi Myung-Kul, Daewoo Corp. vice chairman. No exports are planned.

Daewoo will have the mini segment to itself until next June when Asia Motors Corp. introduces its own minitruck line, based on the Daihatusu HiJet.

Daewoo's minitruck output is expected to total 18,000 units this year, rising to full capacity of 105,000 by next year.

For Daewoo Group, the decision to enter the mini segment with a lineup produced by a shipbuilder is less a grand marketing experiment than it is a declaration of freedom.

The group already is involved in carmaking through Daewoo Motor Co., its 50-50 joint venture with General Motors that produces the Pontiac LeMans. With a capacity of 280,000 units a year, ranging from the LeMans through the luxury-class Royal line to heavy trucks and buses, the company is Korea's third biggest vehicle manufacturer.

But in 1989, Daewoo arrived at a watershed decision: the company would build a minicar independent of — and despite the objections of — its longtime U.S. partner.

Daewoo management has long been disenchanted with GM, especially over what it sees as the U.S. company's failure to push the LeMans harder in the United States. Touted as the "World Car" when it was introduced in 1986 in Korea, exports have been falling far short of projections.

One reason is erratic quality.

GM has steadfastly resisted Daewoo Motor's attempts to branch out into other lines, insisting that the venture first solve its production and quality problems.

Daewoo Group's chairman "is fed up with Daewoo Motor. He's trying to put new quality in place," said a U.S. executive whose components company supplies Daewoo Motor and Daewoo Shipbuilding.

"He is implementing a really different philosophy with Suzuki."

With Suzuki, Daewoo Group got a fresh start to relearn its lessons in automaking. Daewoo Shipbuilding was assigned to build the Tico under license to Suzuki.

Adopting Suzuki's philosophy, which stresses each employee's personal responsibility for efficiency and quality, a $700 million plant was quickly erected and completed in Changwon. Pilot production began in January 1991; by May, the first minicars were being delivered to customers.

Training and planning are key elements of the Suzuki method. By the time the new plant started up earlier this year, 1,400 of Daewoo's production workers had studied up to six months at Suzuki's Kosai and Iwata plants, said Yeo Dae-Won, operations and coordination manager.

The Labo pickup has a 796 cc engine.

"Management believes that if Suzuki does something, they do it for a reason and we should learn to do the same," he said.

Daewoo is convinced the investment in training is paying off. During a plant tour, the assembly line momentarily halted because of a snag, but all workers kept busy, cleaning their tools and tidying up.

"Productivity here is the highest among Korean auto plants," boasted Ham Young-Ki, production engineer and a veteran of Daewoo Motor. ■

International Editor James R. Crate contributed to this report.

Boss says Mack will stay

Someday engines may be imported

JIM HENRY
Staff Reporter

ALLENTOWN, Pa. — Mack Trucks boss Elios Pascual spent much of his year-end press conference last week denying rumors he said were spread by competitors. He repeatedly assured reporters that Mack's future is secure.

"I have seen battles among manufacturers, but I have never seen anything so unfair and so unethical as the things I have heard said about Mack," Pascual said.

Pascual emphatically denied that Mack would quit building its own engines because it supposedly couldn't meet stricter emissions standards for 1994.

"The truth is, Mack engines — not in 1994, not in 1993, and not in 1992, but today, right now, in our labs in Hagerstown (Md.) — Mack engines are meeting the 1994 standards," Pascual said. He stabbed the podium with a finger to punctuate his phrases.

But he did say that Mack's engine production is too small to be viable in the long run. He said the company may share a family of engines in the future with parent company Renault and its partner, AB Volvo — as long as all three brands are distinguishable from one another.

"People say, how can we justify being an engine manufacturer, only building fewer than 20,000 engines a year? Obviously, that doesn't make sense in the long term," Pascual said.

He said development costs for a new heavy-truck engine run about $700 million to $1 billion. Mack will build about 14,000 engines this year; volume of 70,000 to 100,000 is needed for efficiency, he said.

He said if Mack uses engines developed in Europe, the U.S. versions will have their own characteristics, and not be "just a Mack label on foreign engines."

Without revealing specifics, Pascual said Mack will introduce "new products" in the first quarter of 1992 and will show "new aggressiveness in sales" next year.

Pascual said Mack is losing about $50 million a quarter, and he said the company expects to show a loss for 1992. Mack lost $46.8 million in the third-quarter of 1990, Mack's last quarter as an independent company.

"It's like the bottle of wine that's either half empty or half full," Pascual said. "You can say, 'My God, how long can these poor French people afford to pay the bills for the losses?' Or, you can say, 'Thank God, they are strong enough to build a company for the 21st century in the United States.'

"We will support U.S. operations as long as necessary," he said. ■

The inside story: firm under fire

The employee newsletter at Mack Trucks Inc., *Macktivities*, provides a snapshot of an old-line company under fire, its new owner battling to keep internal communications open and healthy.

Some images:

- The work force is older.

Macktivities said Mack paid $3,839 in health benefits for each truck built in 1990, representing 23.5 percent of total payroll costs. Of 450 employees given early retirement since May, most had 20 years experience and some had more than 40.

- Rumors are troublesome.

The "Rumor Mill" section explained restructuring in the accounting department, relations between Volvo and Renault, and even a "threatening" phone call at a Mack facility in July that sparked a false rumor there had been a bomb threat.

- New programs are arriving.

There were explanations of items like FMECA (failure mode effect and criticality analysis) and the necessity for quality audits.

— *Jim Henry*

Flagging German demand pulls Europe sales lower

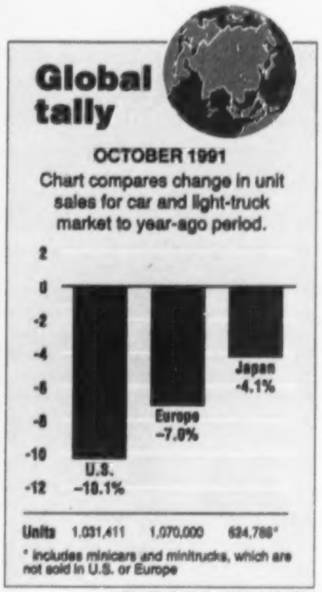
Total in 17 nations off 7% for October

DIANA T. KURYLKO
Staff Reporter

FRANKFURT — European auto sales declined 7 percent in October from a year earlier as German demand continued to cool.

But 10-month sales were up 1.5 percent over 1990.

According to *Automotive News* estimates, sales in the 17 European countries slipped to 1.07 million in October, while year-to-date sales reached 11.8 million.



* Includes minicars and minitrucks, which are not sold in U.S. or Europe

AUTOMOTIVE NEWS / MARTHA GRATTAN

Sales in Germany declined 10 percent in October, to 301,000, the third consecutive year-to-year dip. For the 10 months, however, sales were still 39 percent ahead of the year-earlier period, at 3.73 million.

Analysts expect German sales to continue to drop for the next two months. They began turning downward in August after more than a year of record demand.

"We expect the final quarter of this year to show a 20 percent to 25 percent decline in Germany from a year ago," said Edmund Chew, who follows the industry for DRI Europe in Frankfurt.

"This time last year, we were in the middle of the upswing, now we're in the downswing."

The German buying boom was driven by demand from private buyers in the former East Germany and focused primarily on entry-level cars, Chew said.

NEW-CAR SALES BY COUNTRY IN EUROPE

Country	10 months, 1991	Pct. change vs. 1990
Germany	3,727,700	+39.00
Italy	2,001,900	− 2.50
France	1,700,500	−13.00
United Kingdom	1,433,400	−21.60
Spain	743,900	−12.00
Netherlands	462,400	+ 0.15
Belgium-Luxembourg	450,500	− 1.50
Switzerland	271,400	− 0.50
Austria	268,400	+ 4.00
Portugal	188,700	+10.00
Sweden	155,300	−22.00
Greece	127,700	+33.00
Finland	82,000	−36.00
Denmark	74,800	+ 1.40
Ireland	64,300	−17.00
Norway	45,900	−14.00
Total	11,798,800	+ 1.50

"The German makers are stronger in the upper-half of the market, and the entry-level was taken by the importers," he said. "If sales go down, we should see the Germans doing better from a market-share standpoint."

In October, Italy was the only country to show a significant improvement in sales.

"It appears to be a worldwide drop-off in consumer confidence," said analyst John Lawson of Nomura Research in London.

"We should be worried about the final quarter. It got off to a bad start."

Sales in Italy, Europe's second largest market after Germany, were up 6.6 percent in October, to 195,800. But sales for the 10 months through October were off 2.5 percent from a year earlier, to 2 million.

France was down 12.8 percent in October, on sales of 193,300 units, and was off 13 percent for 10 months, to 1.70 million.

October sales in the United Kingdom plunged 22.5 percent, to 101,100, and were off 21.6 percent for the 10 months, to 1.43 million. Of the 17 countries tallied by *Automotive News*, only Sweden and Finland have suffered steeper drops than Britain this year on a percentage basis.

Volkswagen Group remained the leader in Europe with 10-month sales of 1.88 million cars, up 6 percent from last year.

But the group's sales fell 13 percent in October, to 164,400, because of model changeover for the bread-and-butter Golf 3.

EUROPEAN SALES BY MANUFACTURER

Manufacturer	10 months, 1991	1991 share[1]	10 months, 1990	Volume change (%) '91 vs. '90

Volvo	171,200	1.50	204,700	−16.40
Honda	150,600	1.30	140,900	+ 7.00
Lada	92,600	0.80	90,500	+ 2.40
Suzuki	88,200	0.70	86,900	+ 1.60
Daihatsu	47,700	0.40	35,400	+35.00
Subaru	46,600	0.40	43,700	+ 7.00
Skoda	44,200	0.40	23,900	+85.00
Saab	43,970	0.40	49,500	−11.20
Isuzu (non-GM)	3,400	0.03	5,400	−36.00
Others	151,630	1.30	63,900	−36.00
Total	11,798,800	100.00	11,627,400	+ 1.50

1-doesn't total 100% because of rounding
2-Includes Alfa Romeo, Lancia
3-Opel; Vauxhall; GM-U.S., Canada; Isuzu; not Saab
4-Includes Jaguar
5-Peugeot, Citroen, Talbot

Similarly, General Motors sales plummeted 16.7 percent in October, to 119,400 units, as production of the all-new Opel/Vauxhall Astra was slowed by model changeover. Sales for the 10 months through October were up 3.7 percent, however.

Ford of Europe sales were down 5 percent in October, to 117,900, while sales at its Jaguar unit plummeted 28 percent.

For the 10 month-period, Ford sales were up 6 percent, to 1.42 million, but Jaguar was down 33.7 percent.

Because of the Astra startup, Ford lengthened its sales lead over GM to 26,200 units for the 10 months. A year ago, Ford was only 4,700 ahead of GM.

The Fiat Group maintained the No. 2 sales slot behind Volkswagen. Fiat slipped 1 percent in October. But for the 10-month period, Fiat sales were down 10 percent from a year earlier, to 1.48 million. AN

Balzekas Motors is golden

Balzekas Motor Sales Inc. (Chrysler-Plymouth) in Chicago has reached its 50th anniversary. Pictured, from left, are: Robert Balzekas; Stanley Balzekas Jr.; George Oswald, Chrysler Corp. field operation manager; and Carole Balzekas. The dealership was founded by Stanley Balzekas Sr., who died in 1987.

50 years with Ford

North Brothers Ford Inc. of Westland, Mich., has celebrated its 50th anniversary. Pictured, from left, are: Thomas C North, dealership business manager; Phil Novell, Ford Division general sales manager; James North, dealership president, and J. Douglas North, dealership vice president and general manager.

BEGINNINGS

■ Two Mitsubishi dealerships have opened in New Hampshire. They are **Cantin Mitsubishi** in Laconia and **Portsmouth Mitsubishi** in Portsmouth.

CITIZENSHIP

■ **Bill Shicker,** president of McMahon Ford in St. Louis and president-elect of the Missouri Automobile Dealers Association, presented a $2,500 check to the St. Patrick Center in St. Louis. The check was presented on behalf of Ford Motor Co.'s community relations committee to help the center educate disadvantaged adults in nutrition, parenting, budgeting and housing.

MILESTONES

■ **Westway Ford-Isuzu** in Irving, Texas, marked its 10th anniversary. Construction is underway for a new Isuzu showroom and sales center.

ADVERTISING

■ Strong Automotive Merchandising took first place for best overall campaign for its client, the **North Alabama Chevrolet-Geo Dealers Association,** at the Chevrolet Bowtie-Geo Global Awards in Nashville, Tenn. Strong's clients include 27 Chevrolet dealer associations and 43 individual dealers. The agency is based in Birmingham, Ala.

INCENTIVE WATCH — CUSTOMER INCENTIVES

CONTINUING PROGRAMS

CHRYSLER CORP.

All programs expire Dec. 31. Finance rates in lieu of rebates start at 6.9 percent on minivans, 4.9 percent on other models.

In addition to the rebates on retail purchases listed here, Chrysler Corp. offers rebates under its Gold Key Plus Program. The rebates, which expire Dec. 31, are $250 to $2,000 on 1992 models and $150 to $1,975 on 1992 models.

1992 models

Chrysler Imperial, New Yorker Fifth Avenue	$1,000
LeBaron coupe, New Yorker Salon	$750
LeBaron sedan	$500
Dodge Monaco	$1,500
Dynasty	$1,000
Shadow conv.	$750
Shadow highline, Daytona, Spirit, Colt	$500
Shadow America	$300
Dodge Ram pickup (gas engine), Ram van conversion, Ramcharger	$1,000
Ram van and wagon, Dakota	$750
Ram 50	$300
Eagle Premier	$1,500
Talon, Summit	$500
Jeep Cherokee	$1,000
Comanche	$750
Wrangler	$500
Plymouth Sundance highline	$500
Acclaim, Laser, Colt hatchback	$500
Sundance America	$300

1990-91 models

Chrysler Imperial	$2,000
New Yorker Fifth Avenue and Salon, LeBaron sedan	$1,500
LeBaron coupe and conv.	$1,000
Dodge Shadow conv.	$2,000
Spirit, Monaco, Dynasty	$1,500
Daytona	$1,250
Colt GL, Shadow highline	$1,000
Shadow America, Colt	$700
Dodge Ram van conversion, Ram pickup (gas engine), Ramcharger	$1,500
Ram wagon, Ram van	$1,250
Dakota	$1,000
Ram 50	$750
Eagle Talon TSi, Premier	$1,500
Other Talon	$1,200
Summit 4-dr., Summit ES 3-dr.	$1,000
Summit base 3-dr.	$750
Jeep Cherokee, Grand Wagoneer	$1,500
Comanche	$1,000
Wrangler	$500
Plymouth Acclaim, Laser RS Turbo	$1,500
Other Laser	$1,200
Sundance highline	$1,000
Sundance America	$700
All awd minivans	$1,000
All 2wd minivans	$500

13 states in Northeast sales zone, expires Dec. 20. Replaces all national rebates on 1992 models in those states. National rebates continue on 1991 models not listed here. Interest rates in lieu of rebates range from 0 to 9.9 percent.

Dodge Shadow convertible (1991)	$2,000
Chrysler LeBaron sedan (1991-92), Plymouth Acclaim (1991-92), Dodge Spirit (1991-92)	$1,500
Dodge Shadow/Plymouth Sundance (1991-92)	$1,000
All minivans (1991-92)	$1,000
Dodge Dakota (1991-92)	$1,000

FORD MOTOR CO.

1992 models

Expires Dec. 3. In lieu of rebates, 4.8 percent loans on Probe, 7.9 on other Ford and Mercury; no finance incentive on Lincoln.

Ford Festiva, Mustang, Taurus	$500
Tempo*	$500
Thunderbird, Crown Victoria	$750
Escort GT and LX-E**	$750
Probe, Taurus SHO	$750
Aerostar*	$500
F series	$500
Ranger	$750
Bronco	$1,000
Mercury Sable	$500
Topaz*	$500
Tracer LTS*	$750
Capri, Cougar, Grand Marquis	$750
All Lincoln	$1,000

*Tempo, Topaz and Aerostar — $1,000 or 7.9 percent loan in Northeast

**Escort Pony and LX and Tracer sedan and wagon — $500 or 7.9 percent loan in Central and Great Lakes regions.

1990-91 models

1990-91 Ford models and 1991 L-M models, expires Dec. 3. In lieu of rebate, 4.8 percent loans on Festiva and Probe, 7.9 percent on other Ford and Mercury. No finance incentive on Lincoln.

Ford Escort (except GT), Mustang, Taurus, Tempo, Thunderbird	$400
Escort GT, Taurus SHO	$600
Festiva, Probe	$1,000
Aerostar*	$400
Ranger, F series, Econoline E-150 (except RV)	$400
Bronco, Econoline E-150 (RV)	$1,000
Mercury Tracer (except LTS), Topaz, Sable, Cougar	$400
Tracer LTS	$600
Capri	$1,000
All Lincoln	$2,000

*Aerostar — $1,000 or 7.9 percent loan in Northeast.

GENERAL MOTORS

Expires Feb. 4. Finance rates in lieu of rebates start at 2.9 percent for Buick, Oldsmobile and Pontiac; 6.9 percent for Chevrolet and GMC.

1992 models

Buick Skylark*	$250-750*
Century, Regal*	$250-1,000*
Riveria	$2,000
Chevrolet Caprice	$1,000
Geo Metro and Storm	$750
Geo Prizm, Camaro, Beretta, Lumina	$500
Cavalier	$300
G van, S/T Blazer, Lumina APV	$1,000
Geo Tracker, Astro, S/T pickup	$750
C/K pickup	$500
GMC G-van, S15 Jimmy (except Typhoon)	$1,000
Sonoma (except Cyclone, GT), Safari	$750
Sierra (except Crew Cab)	$500
Oldsmobile Cutlass Ciera (national)	$1,000
Regional programs, various models	$500-2,000
Pontiac Trans Sport	$1,000
Grand Prix	$750
LeMans, Firebird	$500

*Based on option package selected.

1991 models

Cadillac All models except Allante (expires Dec. 31)	$2,000
Chevrolet Caprice	$1,000
Geo Metro, Camaro	$750
Geo Storm and Prizm, Beretta, Lumina	$500
Cavalier, Corsica	$300
V Blazer, Suburban, G-van, S/T Blazer, Lumina APV	$1,000
Geo Tracker, Astro, S/T pickup, R/V and C/K pickups	$500
GMC V Jimmy, Suburban	$1,500
S15 Jimmy, G-van, Safari	$1,000
Sonoma (except Cyclone)	$750
Sierra, R/V pickups	$500
Oldsmobile - regional programs, various models	$500-2,000
Pontiac Trans Sport, LeMans, Firebird	$1,000
Grand Prix	$750

HYUNDAI

49 states (expires Jan. 3)

Sonata with SE pkg. (1991), Excel with SE pkg. (1991)	$500
Scoupe (1991), Excel base (1991)	$750
Other Excel (1991), Other Sonata (1991)	$1,000

California only (1991 models, expires April 2)

Excel, Scoupe	$750-1,000
Sonata	$1,000-1,500

All states (1991 models, expires Jan. 3)

All 1991 models if trade is a 1986-90 Hyundai	$1,000

MAZDA (expires Jan. 3)

Navajo (1991)	$1,000
Trucks (1992)	$1,000

MITSUBISHI (expires Dec. 31)

California (1990-91)

Precis	$500

Hawaii (1990-91)

Galant	$1,500
Eclipse	$750
Mirage	$500
Pickups, Montero	$750-800

ROLLS-ROYCE/BENTLEY (1991 models; expires Dec. 31)

All models	Company pays U.S. luxury tax

SUBARU (expires Jan. 3)

Legacy L and L Plus (1992)	$500
Loyale (1991-92)	$500
XT, XT-6 (1991)	$2,000

SIA plant hikes Isuzu production

LINDSAY CHAPPELL
Staff Reporter

American Isuzu Motors Inc. will receive more trucks from its U.S. assembly plant.

Subaru-Isuzu Automotive Inc. in Lafayette, Ind., is accelerating production of Isuzu pickups and Rodeo sport-utilities, planning to reach 7,000 a month by January.

In October, the plant built 6,706 trucks, up from 5,283 in September, but November and December will be lower because of holidays.

The current dealer body is expected to handle the extra production. This year, the 595 dealers have been selling about 5,100 pickups and Rodeos a month, including imported versions.

"We're confident about the increase," said Jack E. Reilly, American Isuzu chairman. "We're looking for the market to begin opening up in the spring. It's an election year. It has to happen."

Reilly predicted a moderate upturn in U.S. car and light-truck sales next year, to 12.5 million. That would be an increase of about 2 percent over projected 1991 calendar-year sales. Isuzu sales rose 0.9 percent in the first 10 months of this year. The company sold 92,937 vehicles, 870 more than in the same period last year.

The company forecasts sales of 120,000 cars and trucks next year.

American Isuzu has new marketing plans on tap for the first of the year. The specifics of those plans have not been revealed to dealers.

The company plans to scale back its U.S. car sales effort by withdrawing from national advertising to focus on a few key regions. Company officials believe that will enable Isuzu to allocate more marketing resources to national truck sales next year.

Reilly predicted that pickup sales will outpace Rodeo sales next year as they have this year. He said production at the Indiana plant will be split 55 percent pickups and 45 percent Rodeos.

Reilly said a recent in-house survey disclosed that 71 percent of the nation's Isuzu dealers are profitable, compared to about 73 percent last year at this time. AN

GM prepares $750 million non-voting stock offering

WASHINGTON — General Motors is seeking federal approval to sell $750 million in preference shares that cannot be converted into common stock.

In a filing with the Securities and Exchange Commission, GM sought approval to sell 7.5 million shares of the stock from time to time, in a shelf offering.

GM said the proceeds from the sale would be used for "general corporate purposes."

Shelf offerings give corporations flexibility to take advantage of market conditions while saving money on costly Securities and Exchange Commission registration requirements. A company can register its securities in advance and keep them "on the shelf" for up to two years before actually selling. As as long as the company files annual and quarterly reports and meets other routine Securities and Exchange Commission disclosure requirements, it can enter the market when conditions are favorable.

GM, like other automakers, is trying to raise money through a number of channels as the Big 3 struggle through their second year of slumping sales.

The companies also have cut costs, laid off workers, closed factories and offered vehicle incentives in order to shore up their balance sheets.

GM gave no details on how it would use the proceeds from the sale or about the selling price, saying only that the stock would be sold "in amounts at prices and on terms to be determined at the time of sale."

8 million is a late arrival

ANNE E. WRIGHT
Chief Statistician

U.S. automakers assembled their eight-millionth vehicle last Wednesday, more than one month behind 1990 and two months behind 1989.

U.S. automakers trail 1990's year-to-date tally by 12.6 percent while truckmakers are down 11.5 percent.

In Canada, light-vehicle production trails 1990 by a mere 1.8 percent. Cars are just about even with 1990, off 0.2 percent, and trucks are down 3.9 percent.

The Big 3 continue to idle plants in the United States and Canada due to poor sales.

This week, workers at seven U.S. plants will be given an early Thanksgiving holiday, and four plants in Canada will be closed.

General Motors idles the Oshawa, Ontario (No. 2), car facility where the Chevrolet Lumina and the Buick Regal are produced.

GM plants down for a second week are the Janesville, Wis., and Detroit truck plants.

Ford Motor Co. extended the downtime one week at the Atlanta and Oakville, Ontario, car facilities. Plants down for a second week are the Lorain, Ohio, and Wayne, Mich., car plants.

Chrysler Corp. has extended the shutdown one week at the Bramalea, Ontario, car plant and two weeks at the Windsor, Ontario (Pillette Road), truck plant. The Sterling Heights, Mich., and Toledo, Ohio, facilities also are closed.

Last week's U.S. car and truck production was up 45.0 and 57.3 percent, respectively, over 1990. The 1990 work week was shortened by the Thanksgiving holiday.

Canadian carmakers' scheduled production last week was up 26.1 percent over the prior week but down 2.6 percent from the year-ago week.

Canadian truckmakers' scheduled assembly last week was up 11.8 percent over the prior week and 36.6 percent over the year-ago week.

Ford scheduled daily and Saturday overtime last week at the Kansas City, Mo., and Louisville, Ky., truck plants.

General Motors scheduled Saturday overtime at nine plants last week.

Slated for two shifts were: the Wilmington, Del.; Lansing, Mich. (C); Lansing, Mich. (M), car plants and the Moraine, Ohio, and Tarrytown, N.Y., truck plants. Facilities scheduled for one shift were the Lordstown, Ohio; Scarborough, Ontario; and Oshawa, Ontario, truck plants and the Oshawa, Ontario (No. 1), car plant.

Chrysler Corp. continues to run daily and Saturday overtime at the St. Louis (No. 2) minivan assembly facility.

Nissan Motor Manufacturing Corp. U.S.A.'s Smyrna, Tenn., plant scheduled daily overtime last week on both shifts. ■

Battery group rebuffs Japan

Toyota and MITI sought to join Big 3 consortium

JACK KEEBLER
and MARYANN MASKERY
Staff Reporter

Toyota Motor Corp. — through its Washington offices — made overtures in a letter "several months ago" to join the United States Advanced Battery Consortium.

That request and another by the Japanese government were flatly rejected.

Consortium members, including the Department of Energy, do not apologize for banning foreign companies from membership. One of the stated goals of the consortium is "to establish the leadership of the United States in the development and manufacture of electric-vehicle batteries."

The exclusion means that Japanese car companies won't get any government help on battery research until at least April, when the Japanese government may begin financing a battery research project.

The United States Advanced Battery Consortium is a cooperative effort among the Big 3, major electric utilities and the U.S. government to develop advanced batteries for motor vehicles.

"It was taken as a given from the beginning that the purpose of the consortium was to improve the competitiveness of the U.S. auto industry," said John Brogan, director of the office of propulsion systems for the U.S. Department of Energy.

"There was never any intention to expand the

Highway bill requires air bags

WASHINGTON — A requirement for driver- and passenger-side air bags on all new cars by the 1998 model year were included in a highway funding bill approved by House and Senate negotiators last week.

The six-year, $151 billion bill, which included the first reauthorization of the National Highway Traffic Safety Administration since 1982, was passed by the House late Tuesday and was being debated in the Senate late Wednesday. President Bush is expected to sign the bill if it passes the Senate.

Under the bill, light trucks would be required to have air bags by the 1999 model year. NHTSA would be required to produce new regulations for improved head-injury prevention, rollover protection, and child booster seats. Safety advocates estimate that those changes

Two-stroke powerhouse

Chrysler Cirrus, a mid-sized concept car incorporating a two-stroke engine and cab-forward design, is one of two vehicles that will debut at January's Detroit auto show. The Cirrus packs a 3.0-liter turbocharged engine that produces 400 horsepower at 6,000 rpm when run on fuel-grade alcohol. See story on Page 6.

Southeast Toyota goes to court

At a North Carolina hearing on Southeast Toyota's business license, former company officials admit they destroyed evidence. See stories on Pages 4 and 33.

Slow sales? Try living in block of ice to lure buyers

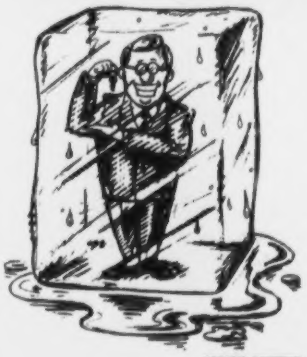
CHARLES M. THOMAS
Staff Reporter

A Dallas-area sales manager confined himself in a 5,000-pound block of ice for 48 hours to lure customers to the dealership. Not only did people come in droves to see him, but some even prayed for him.

A Virginia dealer sold Ford Festivas for the low, low price of $3,995 while a sales manager in Indiana fed 1,000 people breakfast Saturday for pre-registering for the dealership's used-car auction.

With car sales in a tailspin, dealers are going to almost any lengths to bring potential customers into their showrooms. And even though some of the promotions seem a little far-fetched, they are succeeding.

Tom Martin, sales manager for North Central Ford in Richardson, Texas, spent 48 bone-chilling hours in a block of ice Nov. 11-13 as part of a campaign to solicit food donations for charity and create some attention for the dealership.



JAMES OWENS

Martin sold 84 cars during his frigid interment and said the promotion built traffic. Of course, he had to fast for 48 hours, and chainsaws were used to release him from the ice.

"I was frozen alive without food or water," he said "I did a lot of calisthenics to keep warm."

The promotion was created by Silco Products of Los Angeles. Martin said people waited in line outside the trailer and trudged

Pearl Harbor trauma

Japan makers fear backlash; ads cut

MARY ANN MASKERY
Staff Reporter

TOKYO — Many Japanese businessmen would rather not "Remember Pearl Harbor." And they would prefer that Americans do a little less remembering as the media focus on next Saturday's 50th anniversary of Dec. 7, 1941.

"Relations are already bad enough," one auto executive said, referring to trade disputes. Many Japanese companies are taking a low profile and waiting for the attention to pass.

Asked how the company felt about the approaching anniversary and any resulting concerns over trade issues, Nissan Motor Co. Ltd. considered the question for five days and then politely replied, "We would like to refrain from commenting on this matter."

In the United States, some Japanese automotive sales companies won't advertise at all this week. But only one suggested that it had anything to do with Pearl Harbor.

DEC. 7 RESPONSE
Congress wants trade action > 34
Importers keep low profile > 34

"We consciously decided not to advertise that week to keep a low profile," said Kim Custer, a spokesman for Mitsubishi Motor Sales of America Inc.

American Honda Motor Co. Inc. is avoiding advertising on evening news programs that feature special reports on Pearl Harbor. The company is also staying away from newsweeklies with cover stories on the anniversary.

Similarly, tiny American Suzuki Motor Corp. "opted not to put ads in issues of magazines that will feature Pearl Harbor," according to Suzuki spokeswoman Laurie Raleigh.

Japanese industrialists generally hope to keep the bombing of the American fleet at Pearl Harbor in the past.

Said Takeshi Tanaka, general manager at Fuji Heavy Industries Ltd., maker of Subaru cars: If the American people "discuss too

Dealers spurn Chrysler plan linking spiffs to CSI score

MARY CONNELLY
Staff Reporter

Chrysler Corp.'s dealers are objecting to the company's proposal to link vehicle incentive payments to dealership performance.

The company has proposed that beginning in 1992 monthly sales objectives and customer satisfaction ratings be used to determine dealer cash incentive payments on various models.

Chrysler would give the largest cash amounts to dealers scoring highest on a performance matrix devised by the company.

At dealer council meetings in late November, dealers opposed the proposal, saying it would create competitive inequities and could accelerate the failure of already weakened dealerships.

E. Thomas Pappert, Chrysler's vice president of sales, announced the proposal to dealers in a Nov. 13 memo.

"We want to emphasize yet again that Customer Satisfaction Index and Sales Satisfaction Index performance is critical to maintaining

GMC Typhoon hit by recall

DETROIT — GMC Truck Division has notified dealers of a potential rear brake problem with its Typhoon sport-utility, said Sharon Hines, a GMC spokeswoman.

The problem involves a potential for rear brake pipe failure. If the link connecting the electronic rear height sensor to the rear axle becomes disconnected, it can lodge between the axle and the rear brake pipe, causing a rear brake pipe failure.

GMC has provided dealers retention clips for upper and lower ball sockets to correct the problem.

Hines declined to specify the number of vehicles involved. The Typhoon is a limited-production performance truck that GMC only began building in the 1992 model year. Hines said most of the units built so far had not yet been shipped to dealers.

GM recalls '92 A-, W-cars

DETROIT — General Motors is recalling 10,250 1992 A- and W-body cars because of a transmission problem that can cause the cars to remain in reverse when the driver shifts into neutral.

The recall involves Oldsmobile Cutlass Cieras and Cutlass Supremes; Buick Centurys and Regals; Chevrolet Luminas; and Pontiac Grand Prixs. All of the cars recalled are equipped with optional 4T60 four-speed automatic transaxles.

About 1,000 of the recalled cars were delivered to customers and the rest are on dealer lots, GM spokesman Jack Dinan said. Dealers have been ordered not to sell cars that may be affected by the problem until tests are run. No accidents or injuries have been reported because of the defect. Not all of the cars being recalled are affected by the problem, Dinan said.

— Phil Frame

Iran car plant only a dream

FRANKFURT — Mercedes-Benz AG said Iranian reports that it has agreed to build an auto plant in Iran are wishful thinking.

Mercedes said its officials talked with the Iranian government about a possible venture, but the talks focused on truck or bus production. "They would like to have us make cars there, but an agreement isn't likely in the next year," said a Mercedes spokesman.

An Iranian new agency had said that Mercedes planned to build an auto plant in Iran that would the largest in the Middle East.

— Diana T. Kurylko

Camry exports to Japan stalled

DETROIT — Toyota has postponed for a year plans to export U.S.-built Camry sedans to Japan, according to *AutoWeek*, a sister publication to *Automotive News*.

Toyota had planned to begin shipping Camry sedans from its Georgetown, Ky., plant to Japan in 1992 to supplement output from Japanese factories, but the plan has been delayed until 1993.

AutoWeek reports in its Dec. 9 issue that because of greater than expected demand in the U.S. market, the Georgetown plant will not have enough capacity to supply Japan.

Toyota is now said to be considering building more Camrys at its plant in Tsururi, Japan, to meet Japanese market needs, *AutoWeek* said.

The new Camry wagon, due for export to Japan from Georgetown at the rate of 700 to 800 units per month in 1992, is said to be unaffected by the shift in sedan exports.

Big 3, OEMs form council

DETROIT — The Big 3 have formed a Joint Automotive Supplier Governmental Action Council to work with their suppliers on auto-related governmental issues.

Ford Chairman Harold A. Poling will serve as the auto company co-chairman of the Council. Dana Corp. Chairman Southwood Morcott has been named the supplier co-chairman.

Under council guidelines, both co-chair positions will rotate every two years, in alternating years.

Ford recalls 641,562 units

DEARBORN, Mich. — Ford Motor Co. is voluntarily recalling 641,562 vehicles — 1990 and 1991 Aerostar minivans with 3.0-liter engines and Tempo and Topaz cars with 2.3 liter engines — to replace the throttle position sensors.

In addition, Ford is recalling 481 of its 1991 F-150 light trucks with 5.0-liter engines and automatic transmissions that were built for sale in California and high-altitude areas to replace the electronic engine control processor.

Those vehicles may exceed emissions standards.

Ford to update axle plant

DEARBORN, Mich. — Ford Motor Co. will spend $700 million to convert its 1.9 million square-foot Van Dyke Axle Plant in Sterling Heights, Mich., to produce state-of-the-art transmissions.

The plant is expected to produce transmissions in 1994 for the next-generation Ford Taurus and Mercury Sable models.

briefly

What about classic cars?

The Vatican is making it possible to carry on a smidgen of a car conversation. Its Latin dictionary, the *Lexicon Recentis Latinitas*, has added about 13,000 new words in the first official revision in 30 years. Among the new entries:

- *Sufflamen disci forma* (disc brakes)
- *Fluxus interclusio* (traffic jam)
- *Autocinetorum lavatrix* (car wash).

The word for carburetor, *aeris benzinique mixtura*, also was added, just in time for a world that travels in cars with fuel-injected engines. Who said Latin wasn't a dead language?

TIE ONE ON, NISSAN — Nissan's 8,700 North American employees are the latest to join Mothers Against Drunk Driving in its holiday fight against liquid good cheer on the roadways. Employees will get red ribbons to tie to their cars, symbolizing "I'm sober," and a 320-foot ribbon will encircle Nissan's Torrance, Calif., building housing Nissan North America offices.

FINALLY, A WINNER — Volkswagen AG has scored its first victory ever in balloting for the European Car of the Year. The winner was the Golf III, which was cited for its safety, recyclability and V-6 engine. In Europe, as in Canada, the Car of the Year winner is chosen by a panel of automotive journalists, not by a single magazine.

Calvet: No gas hogs in Europe

CALVET'S CAFE — Jacques Calvet, the free-thinking **Peugeot SA** chairman whose lonely cry for limits on Japanese imports in Europe was eventually adopted by others, has a new quest. At the introduction of **Citroen's** Citela electric car, he said Europe should impose fuel consumption standards like the U.S. corporate average fuel economy laws. Specifically, reports *Autocar & Motor*, "He said that, by 2000, no car averaging less than 47 mpg should be sold in Europe." That would knock the Mercedes S-class for a loop.

CHARGE IT UP — The folks at Southern California Edison don't claim their solar-powered parking lot will be economical, but it will provide clean power when it opens next year. The prototype being built in Diamond Bar at the new headquarters of the South Coast Air Quality Management District will gather solar power in photovoltaic cells. The system recharges employees' electric cars and feeds the general electricity network when cars aren't plugged in.

HOME ON THE RANGE — Montana resident Thomas Owens has learned that trouble can follow if you drive where the deer and the antelope play. Owens' problems started when his 1982 **GMC** pickup had racked up about 15,000 miles. The engine smoked, lacked power and quit at 42,000 miles. Even after repairs, problems continued, and Owens sued **General Motors** when the automaker refused to fix the pickup under warranty. Now the Montana Supreme Court has ruled that the problems were Owens' fault. Evidence showed that he drove his pickup over rocks and small trees, that a bullet hole decorated the floorboard and that a variety of dents were caused by cattle smacking the body.

Chrysler keeps cab-forward for new designs

MARY CONNELLY
Staff Reporter

AUBURN HILLS, Mich. — Chrysler Corp. will once again signal its design and engineering directions when it unveils two concept cars at the North American International Auto Show in Detroit in January.

The Chrysler Cirrus concept car is powered by a turbocharged 3.0-liter, six-cylinder two-stroke engine. The Cirrus uses a cab-forward design that hints at Chrysler's design thesis for a next generation of mid-sized sedans, due in the mid-1990s.

The 1992 Dodge Recharger concept minivan, powered by an electric motor, also employs a cab-forward design. Unlike Chrysler's current minivan, the concept vehicle has a second hinged door on the left side. Chrysler is using the Recharger to test a new, more rounded design as it prepares to remake its minivan fleet in the 1995 calendar year.

The two-stroke engine in the Cirrus meets 1996 California low-emission standards, Chrysler said. It delivers 400 horsepower at 6,000 rpm and operates on fuel-grade alcohol.

The two-stroke engine weighs about 40 percent less than a comparable four-stroke engine and needs about half the space under the hood.

The Cirrus sedan uses styling cues normally associated with sport coupes, such as a bucket seat for every passenger.

"Over the past few years, our concept cars have exhibited a variety of shapes that hint at future design directions," said Neil Walling, Chrysler's director of advanced and international design. "Cirrus, with its exaggerated cab-forward design and highly sculpted exterior, is another example of a first effort that will evolve over the next few years."

The Cirrus is testing design themes for a future compact to mid-sized sedan. It has a 115.1-inch wheelbase and overall length of 186.7 inches. The Cirrus is smaller than Chrysler's 1993 LH sedans, which are 200 inches in overall length.

But the Cirrus is larger than Chrysler's current A-body sedans. The A-body Dodge Spirit/Plymouth Acclaim/Chrysler LeBaron sedans have a 103.5-inch wheelbase and overall length of 181.2 inches. The A-bodies are scheduled for replacement in the 1995 model year.

The minivan concept vehicle focuses on future technology by using a zero-emissions powertrain taken from Chrysler's TEVan program, an electric minivan feasibility project within Chrysler engineering. Chrysler announced last January that it is developing an electric minivan for possible production.

The Recharger, whose name is a 1990s twist on the old Dodge Charger nameplate, is powered by nickel iron batteries with a range of approximately 120 miles of highway driving or 100 miles urban driving on a single charge. The 54-kilowatt direct-current motor produces a top speed of 65 mph, Chrysler said.

The Recharger has a two-speed automatic transmission, power steering and brakes and air conditioning. The vehicle has an on-board charging system.

Chrysler, which is initiating its cab-forward design philosophy with four mid-sized 1993 LH sedans, employs cab-forward on a minivan for the first time. Cab-forward lowers the cowl to improve forward visibility and command-of-the-road feeling. ■

The Dodge Recharger has a 119.3-inch wheelbase and 190.1-inch overall length. Current Chrysler minivans have a 119.3-inch wheelbase and 192.8-inch overall length.

Acura dealers prefer quality over FSX, Beat

RICHARD JOHNSON
Staff Reporter

TOKYO — Acura dealers in the United States are more interested in improvements to the current luxury cars than in the FSX as a Lexus LS400-fighter or the Beat as a niche sports car.

The FSX sports sedan, shown this fall as a concept at the Tokyo Motor Show, has been widely viewed as a harbinger of Acura's future sedan flagship. It is rumored to be destined for an appearance at the Detroit show in January, bearing an Acura badge.

However, Honda President Nobuhiko Kawamoto, speaking in an interview, said "we haven't come to any concrete product planning." He said the FSX is still very much in the research stage.

Kawamoto: no concrete plan

"Our research and development members wanted to make something new and wanted to ask the public if this is the right direction or not, so I allowed them to try it," he said.

U.S. Acura dealers have not been clamoring for the FSX. "I attended the Acura dealer meeting . . . and talked with the dealers," he said. "Their concern for the product is almost satisfied at the present level if we will improve slightly — getting better and better as we have before. That should be sufficient for them."

Neither were U.S. Acura dealers drumming for the Beat, the 600-cc two-seat mini convertible introduced in Japan last summer. The car is being tested in the United States and Europe but it would be heavily modified if exported.

"If we bring this car to the States it will be completely different from the present Beat," said Kawamoto. "It should be modified for crashworthiness, safety features, emission control.

"I think in the States the minimum size is much bigger than in Japan. The normal performance in traffic conditions is much higher than here. This is just a personal, rough idea, but at least 1,000 cc or 1,300 cc would be necessary." ■

Dismal sales kindle 'do something' talk

JIM HENRY
Staff Reporter

NEW YORK — With an election year around the corner, the latest dismal 10-day sales period could add to the growing pressure for the federal government to "do something" to help the economy, analysts said.

The daily selling rate of cars and light trucks fell 18.2 percent during mid-November, following a poor showing to start the month. Nov. 11-20 sales totaled 333,306, compared to 352,328 last year.

There were nine selling days in mid-November this year vs. eight last year, so comparisons in this article are based on daily selling rates.

Last year's 10-day sales were relatively strong, and that made this year's period look worse by comparison.

Ford Motor Co. and and Chrysler Corp. both plunged more than 20 percent from last year, and General Motors was off 15.3 percent.

The period also saw sales decline for the three biggest Japanese companies in the U.S. market. Sales for Nissan Motor Corp. in U.S.A. (Nissan-Infiniti) were down 11.1 percent. American Honda Motor Co. Inc. (Honda-Acura) fell 7.9 percent. And Toyota Motor Sales U.S.A. Inc. (Toyota-Lexus) dropped 23.3 percent.

The mid-month decline, shared about evenly between cars and light trucks, had some analysts talking about a second recession in the auto industry, even though the industry never really recovered from the first one that began last year.

"Sales are rotten and they're going to stay rotten for a long time . . . unless we get a major booster shot in the economy," said Joseph Phillippi, auto industry analyst for Shearson Lehman Brothers Inc.

"It will be interesting to see what if anything the people in Washington are going to be able to do," he said.

Jack Kirnan, industry analyst for Kidder, Peabody & Co., said the pressure on Washington is so great that politicians are willing to consider "crazy, short-term political solutions" just so they can demonstrate they're trying to fix the economy.

"They are lurching at any program," Kirnan said.

"You have a president who wants to get re-elected, and he's slipping in his popularity polls. We are probably going to get some major stimulus to the economy, whether it's a cut in tax rates, investment tax credits, what-have-you. . . . There's a proposal going around to give a tax credit to scrap pre-1980 cars, or for buying an American car — things that wouldn't have been heard of six months ago," he said.

"Who'd have thought six months ago it would be this bad? I, for one, was fooled. I thought we'd be well on the way to some bigger volumes by now," Kirnan said.

He said an upturn in sales from May through July had analysts talking about a recovery, but the industry couldn't sustain it. ■

VW trims prices of 1992 Passats

ARLENA SAWYERS
Staff Reporter

Volkswagen United States has cut prices on its 1992 Passat GL models.

The manufacturer's suggested retail price of the 1992 Passat GL sedan has been reduced from $17,550 to $16,995, and the 1992 Passat GL wagon has been reduced from $17,970 to $17,390.

Also, the prices of two Jetta models have been increased because air conditioning has been made standard equipment. Prices have been hiked less than the $840 option price of air conditioning.

The new price of the Jetta GL sedan is $11,995. That is $625 more than the former price, but it is $215 less than the previous price with air conditioning. The $12,995 Jetta Carat sedan is $605 more than before but $235 less than the previous price with air conditioning.

The adjustments from 1992 introductory prices still represent an increase over 1991 models.

The 1991 Passat GL listed at $15,590; the 1991 Passat wagon was $16,010; the 1991 Jetta GL listed at $10,930; and the 1991 Jetta Carat was $11,910. ■

BATTERY

Big 3 consortium rebuffed Japan

continued from PAGE 1

management of the consortium to include foreign makers."

Brogan said the Toyota inquiry was made while the consortium was being organized, and "little time was spent in saying, 'No.' "

A spokeswoman for Toyota Motor Sales U.S.A. Inc. said "an inquiry in the form of a letter was made by the Washington office, but an inquiry is not an attempt to join."

Toyota and Japan's Ministry of International Trade and Industry say their interest in the consortium was driven by a sincere interest in sharing information and a need to know about the United States recharging infrastructure.

THE U.S. EDGE

A Japanese battery producer deeply involved in electric vehicle research understands the consortium as an attempt to provide a competitive edge to U.S carmakers and battery makers.

"The United States is irritated about some of the issues (that have come up in the ongoing Stategic Initiative trade talks)," said a spokesman for Japan Storage Battery Co., which is working with several Japanese automakers on electric-vehicle development.

"They have lost in the compact-car war with Japan, so (the U.S. government) has changed its former policy of not intervening in industry and is trying to win the EV market. But we have no intention of participating in the U.S. project."

Obviously, all carmakers need to know what recharging voltages will be available, where recharging will take place and even simple specifications for recharging outlets, cables and plugs. Exclusion from the U.S. project would be especially critical to foreign automakers if the battery research guides the utilities in providing an innovative recharging infrastructure.

MITI made its informal, but apparently serious, offer while discussing a large-scale energy conservation research program called the Moonlight Project.

Moonlight began during the 1978 oil crisis, when the government sought ideas to conserve energy, even tapping the power of moonlight.

Major research projects included high-temperature gas turbine engines, waste heat recovery technology and electric vehicle battery research.

LOTS OF MONEY AVAILABLE

Jack Guy, manager of commercial development with the Electric Power Research Institute, said that MITI director Masatake Wada made an informal inquiry about joining the consortium "back in January or February," of this year when Wada was in charge of the Moonlight project.

Wada was briefing eight American utility companies on one aspect of Moonlight: a 100-by-300-foot building full of lead-acid batteries to smooth out the electric power produced by Japanese utilities.

During a break in the all-day meeting, Guy said, Wada switched the conversation over to the U.S. battery consortium, asking about the group's purpose, goals and funding.

"Wada then informed us that he could make quite a bit of funding available," said Guy. "He told us that he would have something like $30 million available for first-year development. He said he also realized that program funding might go up to as much as $100 million a year."

Afterward, Guy said, he informed the consortium's management group about the "informal" conversation with Wada and the Japanese interest in joining the effort.

"Well, they told me 'No' — but hell no," said Guy. He said the Electric Power Research Institute "had worked with the Japanese in the past on other projects like coal gasification and they were very generous funders.

But the feeling was that MITI didn't have all of its cards on the table — that they were holding something back."

John Wallace, director of electric vehicle programs and planning at Ford Motor Co. and external affairs director for the battery consortium, said he understood the inquiry to be informal.

MITI PROPOSES PROJECT

"They approached some American utilities and said something like 'we have lots of money to offer you,' " said Wallace.

"But there was certainly a suspicion that their motives were not entirely honorable. The feeling was that they talk cooperation, but don't act it. We believed that Japanese battery manufacturers would preferentially sell to a Japanese carmaker. So, it was not seen in our best interest to let them join."

MITI has proposed its own project to research lithium batteries in Japan. It will begin in April if the Finance Ministry agrees to provide money. The intention is a 10-year, $108 million program aimed at Japanese battery makers.

The U.S. consortium has not yet chosen what types of batteries to focus on, and lithium may not be chosen. If they are to be practical, electric vehicles need new batteries that hold more electricity, recharge faster and weigh less than lead-acid batteries.

A spokesman for Yuasa Battery Co. in Japan said, "If we are asked by MITI to joint the MITI project, we will surely join it. I cannot say if the lithium battery will be selected for practical use since the situation is very flexible. We don't know about the future to come."

The U.S. partnership agreement was signed by the Big 3 on Jan. 30, 1991, and the Electric Power Research Institute, a utility group, joined them in the U.S. Advanced Battery Agreement on July 16.

At a White House ceremony in October, President Bush and Secretary of Energy James Watkins announced that the government would join the U.S. Advanced Battery Consortium and provide half the budget for the four-year, $260 million research project.

Bush clearly put the government on the side of the Big 3 at the announcement.

"Electric vehicles represent the next technology milestone in the auto industry, and we intend to beat our competitors to that milestone," said Bush. "Today's agreement embodies an idea whose time has come; that government and business can help America outthink, outwork and outperform any nation in the world." ■

INCENTIVE WATCH — CUSTOMER INCENTIVES

CONTINUING PROGRAMS

CHRYSLER CORP.

All programs expire Dec. 31. Finance rates in lieu of rebates start at 6.9 percent on minivans, 4.9 percent on other models.

In addition to the rebates on retail purchases listed here, Chrysler Corp. offers rebates under its Gold Key Plus Program. The rebates, which expire Dec. 31, are $250 to $2,000 on 1992 models and $150 to $1,975 on 1992 models.

1992 models	
Chrysler Imperial, New Yorker Fifth Avenue	$1,000
LeBaron coupe, New Yorker Salon	$750
LeBaron sedan	$500
Dodge Monaco	$1,500
Dynasty	$1,000
Shadow conv.	$750
Shadow highline, Daytona, Spirit, Colt	$500
Shadow America	$300
Dodge Ram pickup (gas engine), Ram van conversion, Ramcharger	$1,000
Ram van and wagon, Dakota	$750
Ram 50	$300
Eagle Premier	$1,500
Talon, Summit	$500
Jeep Cherokee	$1,000
Comanche	$750
Wrangler	$500
Plymouth Sundance highline	$500
Acclaim, Laser, Colt hatchback	$500
Sundance America	$300
1990-91 models	
Chrysler Imperial	$2,000
New Yorker Fifth Avenue and Salon, LeBaron sedan	$1,500
LeBaron coupe and conv.	$1,000
Dodge Shadow conv.	$2,000
Spirit, Monaco, Dynasty	$1,500
Daytona	$1,250
Colt GL, Shadow highline	$1,000
Shadow America, Colt	$700
Dodge Ram van conversion, Ram pickup (gas engine), Ramcharger	$1,500
Ram wagon, Ram van	$1,250
Dakota	$1,000
Ram 50	$750
Eagle Talon TSi, Premier	$1,500
Other Talon	$1,200
Summit 4-dr., Summit ES 3-dr.	$1,000
Summit base 3-dr.	$750
Jeep Cherokee, Grand Wagoneer	$1,500
Comanche	$1,000
Wrangler	$500
Plymouth Acclaim, Laser RS Turbo	$1,500
Other Laser	$1,200
Sundance highline	$1,000
Sundance America	$700
All awd minivans	$1,000
All 2wd minivans	$500

13 states in Northeast sales zone, expires Dec. 20. Replaces all national rebates on 1992 models in those states. National rebates continue on 1991 models not listed here. Interest rates in lieu of rebates range from 0 to 9.9 percent.

Dodge Shadow convertible (1991)	$2,000
Chrysler LeBaron sedan (1991-92), Plymouth Acclaim (1991-92), Dodge Spirit (1991-92)	$1,500
Dodge Shadow/Plymouth Sundance (1991-92)	$1,000
All minivans (1991-92)	$1,000
Dodge Dakota (1991-92)	$1,000

FORD MOTOR CO.

1992 models

Expires Dec. 3. In lieu of rebates, 4.8 percent loans on Probe, 7.9 on other Ford and Mercury; no finance incentive on Lincoln.

Ford Festiva, Mustang, Taurus	$500
Tempo*	$500
Thunderbird, Crown Victoria	$750
Escort GT and LX-E**	$750
Probe, Taurus SHO	$750
Aerostar*	$500
F series	$500
Ranger	$750
Bronco	$1,000
Mercury Sable	$500
Topaz*	$500
Tracer LTS*	$750
Capri, Cougar, Grand Marquis	$750
All Lincoln	$1,000

*Tempo, Topaz and Aerostar — $1,000 or 7.9 percent loan in Northeast

**Escort Pony and LX and Tracer sedan and wagon — $500 or 7.9 percent loan in Central and Great Lakes regions.

1990-91 models

1990-91 Ford models and 1991 L-M models, expires Dec. 3. In lieu of rebate, 4.8 percent loans on Festiva and Probe, 7.9 percent on other Ford and Mercury. No finance incentive on Lincoln.

Ford Escort (except GT), Mustang, Taurus, Tempo, Thunderbird	$400
Escort GT, Taurus SHO	$600
Festiva, Probe	$1,000
Aerostar*	$400
Ranger, F series, Econoline E-150 (except RV)	$400
Bronco, Econoline E-150 (RV)	$1,000
Mercury	
Tracer (except LTS), Topaz, Sable, Cougar	$400
Tracer LTS	$600
Capri	$1,000
All Lincoln	$2,000

*Aerostar — $1,000 or 7.9 percent loan in Northeast.

GENERAL MOTORS

Expires Feb. 4. Finance rates in lieu of rebates start at 2.9 percent for Buick, Oldsmobile and Pontiac; 6.9 percent for Chevrolet and GMC.

1992 models	
Buick Skylark*	$250-750*
Century, Regal*	$250-1,000*
Riveria	$2,000
Chevrolet Caprice	$1,000
Geo Metro and Storm	$750
Geo Prizm, Camaro, Beretta, Lumina	$500
Cavalier	$300
G van, S/T Blazer, Lumina APV	$1,000
Geo Tracker, Astro, S/T pickup	$750
C/K pickup	$500
GMC G-van, S15 Jimmy (except Typhoon)	$1,000
Sonoma (except Cyclone, GT), Safari	$750
Sierra (except Crew Cab)	$500
Oldsmobile Cutlass Ciera (national)	$1,000
Regional programs, various models	$500-2,000
Pontiac Trans Sport	$1,000
Grand Prix	$750
LeMans, Firebird	$500
*Based on option package selected.	
1991 models	
Cadillac	
All models except Allante (expires Dec. 31)	$2,000
Chevrolet Caprice	$1,000
Geo Metro, Camaro	$750
Geo Storm and Prizm, Beretta, Lumina	$500
Cavalier, Corsica	$300
V Blazer, Suburban, G-van, S/T Blazer, Lumina APV	$1,000
Geo Tracker, Astro, S/T pickup, R/V and C/K pickups	$500
GMC V Jimmy, Suburban	$1,500
S15 Jimmy, G-van, Safari	$1,000
Sonoma (except Cyclone)	$750
Sierra, R/V pickups	$500
Oldsmobile - regional programs, various models	$500-2,000
Pontiac Trans Sport, LeMans, Firebird	$1,000
Grand Prix	$750
HYUNDAI	
49 states (expires Jan. 3)	
Sonata with SE pkg. (1991), Excel with SE pkg. (1991)	$500
Scoupe (1991), Excel base (1991)	$750
Other Excel (1991), Other Sonata (1991)	$1,000
California only (1991 models, expires April 2)	
Excel, Scoupe	$750-1,000
Sonata	$1,000-1,500
All states (1991 models, expires Jan. 3)	
All 1991 models if trade is a 1986-90 Hyundai	$1,000
MAZDA (expires Jan. 3)	
Navajo (1991)	$1,000
Trucks (1992)	$1,000
MITSUBISHI (expires Dec. 31)	
California (1990-91)	
Precis	$500
Hawaii (1990-91)	
Galant	$1,500
Eclipse	$750
Mirage	$500
Pickups, Montero	$750-800
ROLLS-ROYCE/BENTLEY (1991 models; expires Dec. 31)	
All models	Company pays U.S. luxury tax
SUBARU (expires Jan. 3)	
Legacy L and L Plus (1992)	$500
Loyale (1991-92)	$500
XT, XT-6 (1991)	$2,000

World sales at '90 level seen for '92

ED WENDT
Staff Correspondent

LONDON — The latest DRI World Automotive Forecast predicts that worldwide new-car demand will turn upward during 1992 and that sales will reach 35.5 million, about the same as 1990.

The biannual report also carries good news for the United States. It predicts that the U.S. sales will grow about 10 percent in 1992. U.S. car sales through October were down 12.6 percent from the same period last year.

For the world, the report predicts a 2.9 percent decline this year, from 35.5 million in 1990 to about 34.4 million. But sales are expected to soar to 40.32 million in 1996, DRI says.

Within the European Community, DRI expects new-car sales to rise from 12.2 million in 1990 to 14 million in 1996.

Mo. dealer agrees to disclose all fees

Clinton Lindburg Cadillac Co. of St. Louis has agreed to tell customers about a fee charged for miscellaneous supplies, materials and waste disposal under an agreement with the Missouri attorney general's office.

The dealership also has agreed to pay $1,000 to cover the state's investigation costs. The probe was begun after a consumer complained of a charge identified only by a number on a repair estimate.

The state requires the dealership, when asked, to explain clearly that the charges are standard on all its work orders.

Holiday continues at 5 plants

ANNE E. WRIGHT
Chief Statistician

General Motors and Ford Motor Co. have extended the Thanksgiving holiday for five U.S. plants as they continue to battle high inventories and slow sales.

Ford extended the shutdown for one week at the Chicago car plant and the St. Louis truck plant.

The Chicago plant produces the Ford Taurus and Mercury Sable, and the St. Louis plant builds the Ford Aerostar.

Ford also idled the Edison, N.J., truck plant for two week. Edison produces the Ford Ranger.

Ford's Lorain, Ohio, truck plant has been reduced to one shift for two weeks. Full production is slated to resume Dec. 16.

Downtime at Ford's Oakville, Ontario, car plant has been extended an additional week. The plant produces the Ford Tempo and the Mercury Topaz.

General Motors announced that the Van Nuys, Calif., and the Willow Run, Mich., facilities will be idled the entire month of December to adjust inventories.

The Van Nuys plant, which builds the Chevrolet Camaro and the Pontiac Firebird, is scheduled to resume production Jan. 2.

The Willow Run plant produces the Buick Roadmaster wagon, the Chevrolet Caprice sedan and wagon and the Oldsmobile Custom Cruiser wagon. It is scheduled to resume production Jan. 6.

U.S. producers' estimated production last week was 121,727 cars and trucks, 35.5 percent below the prior week and 31.1 percent below the year-ago week, both of which had five work days.

U.S. car and truck production for 11 months was estimated at 8,205,536 units, off 12.6 percent from 9,383,379 at the same point last year.

In Canada, which worked a five-day week, car production was off 22.6 percent from the prior week and 26.2 below the year-ago week.

Truck production nearly matched the previous week's output and rose 47.1 percent above the year-ago week.

For the year, car and truck production in Canada is 1,784,288, down 2.0 percent from 1,819,979 in 1990.

Chrysler scheduled daily overtime this week at the Brampton, Ontario, Jeep facility that produces Wrangler.

General Motors scheduled Saturday overtime at the Scarborough, Ontario, and the Oshawa, Ontario, truck plants last week.

In the United States, three plants are scheduled for Saturday overtime this week. The Detroit-Hamtramck, Mich., car assembly is scheduled for one shift, and the Wilmington, Del., and the Lansing, Mich.(M), car plants are scheduled for two-shifts.

Chrysler staff all get bonuses

HIGHLAND PARK, Mich. — Chrysler Corp.'s 19,000 salaried workers are going to get Christmas bonuses Dec. 20. Chrysler spokesman Lee Sechler says the maximum amount is $600 and bonuses are based on the number of weeks worked this year.

Although Chrysler had lost $892 million through the first nine months of the year, Sechler said the company decided to pay the bonuses "because of the many sacrifices made by the salaried group."

The company's hourly workers received bonuses Dec. 6.

General Motors and Ford Motor Co. will not pay Christmas bonuses to their salaried work force this year due to company losses. Hourly workers at both GM and Ford will get bonuses.

Chrysler plans two divisions

Third channel will disappear in 5 to 7 years, dealers told

MARY CONNELLY
Staff Reporter

Chrysler Corp. expects to sell its vehicles through only two retail divisions within five to seven years. But the company has not yet decided if any brands will become extinct.

Chrysler now retails its vehicles through three divisions: Chrysler-Plymouth, Jeep-Eagle and Dodge car/Dodge truck. Dodge car/Dodge truck is expected to remain one division in the future. Chrysler-Plymouth and Jeep-Eagle would form the basis of the second division, said dealers who attended the company's recent national dealer council meetings in Florida where the future of the retail network was discussed.

With one less channel, Chrysler would hope to gain marketing and operational efficiencies and increase brand distinction, dealers said.

Several dealer sources said Chrysler executives told them at the meetings that the consolidation into two divisions could be achieved within five to seven years.

Last month, Chrysler acknowledged it is examining how many brands, nameplates and dealers it will need in 2000. The company also said at that time that it was examining the long-term viability and possible elimination of the Eagle and Plymouth brands.

But Chrysler has cautioned that any brand consolidation or elimination is years down the road. The divisional consolidation could be achieved sooner and is seen by dealers as an interim step in the retail network restructuring.

Dodge, Jeep dealers want sport-utilities > 41

A Chrysler spokesman declined comment last week on the distribution channel consolidation.

Donald Warnock, chairman of the Dodge National Dealer Council, said consolidation would allow Chrysler to better focus its resources.

"We need distinctive product," he said. "The Dodge council has concerns about whether that can be accomplished with three divisions. So we have to look at two divisions. It is a matter of discussion.

"We don't want to have a customer wandering into a showroom and seeing the same

Seville, Eldorado orders pour in

JAVIER MENDOZA

Harold Cabrera checks out a 1992 Seville at Martin Cadillac in West Los Angeles, Calif.

PHIL FRAME
Staff Reporter

Sales of the redesigned Seville were up 64 percent in the final 10 days of November, underscoring General Sales Manager Peter Gerosa's belief that it may be the hottest-selling car in America.

Cadillac said demand is outpacing the Hamtramck, Mich., assembly plant's ability to build the 1992 car, in many cases causing customers to wait two months for delivery.

The plant, which builds the new Seville and Eldorado, has been unable to hit line acceleration targets because of rigid quality standards. One source said due to problems getting fit and finish up to specification at faster line speeds, line-rate goals for early December may not be reached until January. Cadillac officials wouldn't comment.

Last week, at a meeting attended by all of Cadillac's staff personnel, Cadillac officials exhorted division employees to improve quality and efficiency, according to sources who were there. Gerosa, who needs more cars, made a particularly impassioned plea.

Cadillac was caught off guard by the strong

Big 3 regain market share from Japan in November

JIM HENRY
Staff Reporter

NEW YORK — Hot sales of four new General Motors lines and a surprisingly strong showing by the Chrysler brand helped the Big 3 take market share away from the Japanese in November for the first time this year.

A shortage of new Civic models caused American Honda Motor Co. Inc. to stumble against its superior year-ago record, magnifying the gains of the Big 3. The Detroit companies had a total market share of 71.7 percent for November, up 2.1 points. Japan's share was 24.7 percent, down 1.2 points.

Total car and light-truck sales for the month were 919,017. Although it was the lowest monthly total since February, the seasonally adjusted annual rate of 12.7 million units was the fourth-highest monthly figure of the year.

With a month to go in 1991, industry sales totaled about 11.4 million. If the pace of sales stays the same in December, the total for the year will be 12.3 million.

The month's final 10 days helped save November which, after two disappointing 10-day periods, came in only 6.6 percent below the year-ago month.

Ford turns Jaguar vise

Losses unchecked; Scheele appointed

JAMES R. CRATE
International Editor

Ford Motor Co., continuing to tighten its operational grip on ailing Jaguar Cars Ltd., last week named an heir-apparent to Jaguar Chairman Bill Hayden and transferred Hayden's deputy back to world headquarters in Dearborn.

The announcement of the shuffle came one week after Ford transferred accounting control of the British carmaker to Dearborn from Ford of Europe.

Nicholas Scheele, head of Ford of Mexico, will become Jaguar's vice chairman effective Jan. 1 and is expected to replace Hayden as chairman in the spring.

Although the departure of Hayden was not formally announced, Jaguar spokesman David Boole confirmed that the 62-year-old Ford executive will retire early in 1992. Hayden underwent heart surgery last year.

Jaguar said Hayden's deputy, John Grant, will assume an unspecified "senior position" with Ford in early 1992.

The changes come at a critical juncture for Jaguar. Two years after Ford paid the equivalent of $2.5 billion to acquire the legendary marque, Jaguar's worldwide sales are off more than 50 percent from their 1988 peak, its losses are mounting and Ford itself is increasingly pressed for cash.

Jaguar, which lost the equivalent of $596.5 million last year, including a one-time charge of $479 million, is expected to post another $270 million loss this year. On a projected build of 24,000 cars this year, Jaguar would be losing $11,000 on every car it produces.

Jaguar's slide has put Ford between a rock and a hard place, many analysts say.

With its own earnings under

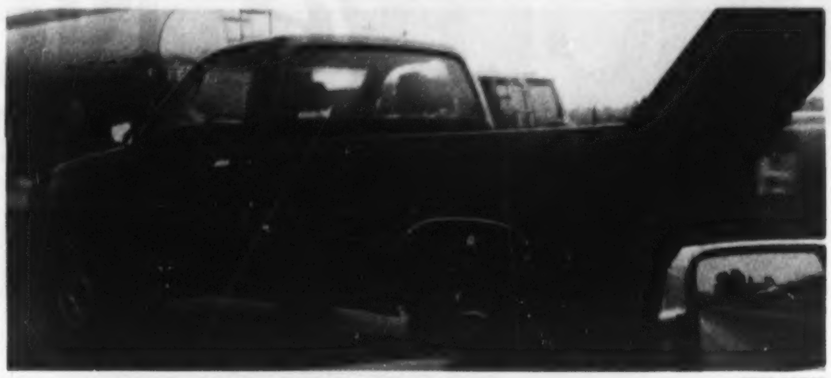
corrections

- Computer glitches distorted two stories in the Dec. 2 issue. The third paragraph of Daniel Malloy's letter about Daihatsu on Page 14 should end "and it'll be great to have a 4x4." The last paragraph of the story at the bottom of Page 17 should begin "But TKM sees the 4x4 sector growing by 70 percent in five years."
- A Dec. 2 article about North Carolina legal proceedings against Southeast Toyota Distributors Inc. incorrectly attributed a comment to Robert A. Collier, the designated hearing officer. Collier did not say he will recommend that the distributor's business license be revoked if evidence emerges of perjury, obstruction of justice or violations of the company's 1988 Consent Decree with the state. In accordance with that agreement, Collier may recommend revocation after hearing the case if he determines that Southeast Toyota has "materially or substantially violated" the agreement.
- A related story misidentified Southeast Toyota spokeswoman Debbie Mason.



Toyota toys with bigger pickup STOP PRESS

A spy photographer in Los Angeles snapped a running prototype of what is believed to be a near full-sized pickup being developed by Toyota. Styling cues include flared rear wheel openings, split rear window and six-bolt wheels. The truck could be introduced in late 1993.

America has raised the prices of its 164-series sedans for 1992. The 164L has a sticker of $29,490, which is $1,030 or 3.6 percent more than the 1991 model. The 164S is $34,990, up $4,020 or 13 percent. Air conditioning, anti-lock brakes and driver-side air bag are standard on both models.

The base 164 sedan is not offered for 1992. The 1991 model was $24,990.

The sedans went up considerably more than the Alfa Romeo convertibles, which rose 1.5 percent for 1992. The Spider convertible is $21,264, up $314, and the Spider Veloce is $24,309, up $359.

The 164 sedans were priced too late to be included in the price table which starts on Page 27 of this issue.

Navistar loses $165 million

CHICAGO — Navistar International Corp. reported a net loss of $165 million for its fiscal year ended Oct. 31, a sharp increase over the $11 million it lost a year earlier.

James C. Cotting, Navistar chairman and chief executive officer, said consolidated sales and revenues totaled $3.5 billion, down from $3.9 billion in fiscal 1990.

Navistar increased its share of North American medium- and heavy-truck retail sales to an all-time high of 29.3 percent in fiscal 1991, up from 27.2 percent a year earlier.

Still, its fiscal 1991 sales of 67,200 medium and heavy trucks were off 15.0 percent from the previous year due to the weak market.

Cotting looks for industry-wide sales of 121,000 medium-duty trucks in Navistar's fiscal 1992, comparable to those of 1991, and a 9 percent increase in heavy-truck sales to 119,000.

'Smart' roads called joint task

WASHINGTON — The National Academy of Sciences has called for a joint government-industry program to develop Intelligent Vehicle Highway Systems.

The academy panel, in a report released last week, found that existing IVHS systems have already shown benefits, but "experience with IVHS is still too limited to answer many fundamental questions about technological feasibility, cost-effectiveness, and market acceptability." It said the Department of Transportation should work with IVHS America, the private, non-profit organization formed last year.

The report predicted that improved traffic management systems will relieve congestion in this decade, thus reducing fuel consumption and auto exhaust pollution.

Chrysler Corp. elects Pawley

DETROIT — Dennis K. Pawley, Chrysler Corp. manufacturing vice president, has been elected executive vice president, reporting directly to Chrysler President Robert A. Lutz.

Pawley remains responsible for all of Chrysler's manufacturing operations and three manufacturing technical centers.

Pawley: Chrysler executive vice president

Pawley started his automotive career with General Motors. In January 1986, he joined Mazda Motor Corp. as vice president of manufacturing responsible for the company's Flat Rock, Mich., plant where the Ford Probe and Mazda MX-6 are produced.

In March 1988, Pawley became vice president of operations for the Otis Group of United Technologies. Pawley left Otis in 1989 and joined Chrysler as general manager of assembly plants.

NADA says sales will grow in '92

WASHINGTON — Sales of new cars and light trucks will improve to 13.5 million units next year, predicts the National Automobile Dealers Association. NADA expects 12.5 million sales this year.

In surveying industry analysts and domestic manufacturers for its annual prediction, NADA found that optimists expect sales to pick up during the first half of 1992 and pessimists say the upturn won't come until late 1992 or 1993. But they all expect 1992 to be better than 1991.

For now, "lack of consumer confidence is not the main culprit behind weak sales. It's due to a simple lack of money. People are trying to rebuild their savings," said Tom Webb, NADA chief economist.

Mitsubishi may hike exports

TOKYO — Mitsubishi Motors Corp. said last week it is studying the feasibility of shipping more vehicles to Europe from its Diamond-Star plant in Illinois. Mitsubishi already exports some Eclipses to Switzerland, Sweden and Austria.

A decision to expand exports to other countries would depend on how much the U.S.-made vehicles would be "accepted in Europe and whether they could be competitive in price," Mitsubishi President Hirokazu Nakamura said.

— Mary Ann Maskery

Nissan growing in Philippines

TOKYO — Nissan Motor Co. said last week it will expand production in the Philippines in anticipation of an upturn in the market there.

Nissan said it will build a stamping plant to begin operations by 1993, and a new vehicle assembly plant, with a capacity of 30,000 to 36,000 units a year, by the end of 1994.

Nissan said it and Marubeni Corp., a Japanese trading firm, will invest approximately 2.7 billion yen (about $20.7 million) in the project.

The two companies together own 40 percent of Pilipinas Nissan, a local assembler.

Nissan is targeting a 25 percent share of a market that is expected to grow to 100,000 units annually by 1995.

Nissan sold 12,692 vehicles in the Philippines in 1990 out of a total market of 57,621.

briefly

Bush to Big 3: Tora Tora Tora

Bob Stempel, Red Poling and Lee Iacocca are likely to join President Bush on his New Year's trip to Japan, Singapore and South Korea. Pundits say the president is trying to put a domestic spin on his foreign travel and to show he can be tough on trade. Late last week, the Big 3 bigwigs had not responded formally, but appeared ready to join the junket. Iacocca's spokesman said: "I'm sure it's something he'd like to do." A spokesman for Stempel said he "would be delighted to comply with the President's wishes." Red Poling said at a **Ford** holiday party, "We'll try to do what the president asks. It's an important issue." Champagne aside, the auto triumvirate is clearly hoping to extract some New Year's resolutions from its Asian counterparts during the Dec. 30-Jan. 10 trip.

Bush to Big 3: Come along

R.I.P. PONTIAC? — Pontiac Division has been calling itself just that since dropping the fancier handle of Pontiac Motor Division in March 1986. Still, it's a bit of a shock to find "the former Pontiac Motor Division" mentioned in an official **General Motors** communique. The reference came in a Nov. 26 personnel change announcement from Inland Fisher Guide Division. They say they used the adjective "former" because of Pontiac's joining the Chevrolet-Pontiac-GM of Canada Group in 1984.

ENVIRONMENTALLY CORRECT — General Motors Electric Vehicles wants to make a statement about its concern for the environment even in its media folder. The cream-colored folder featuring a waterfall on the cover is printed on recycled paper with soy-based ink.

MILITARY GREEN — When it comes to recycling, **Ford Motor Co.'s** Engine Division in Dearborn, Mich., is in high gear. According to the December issue of *Ford Times*, Engine Division employees could be called "conservation commandos." Foam coffee cups are out. Memos, graphs and charts, usually circulated at meetings, have been replaced with overhead projections and slides. The kicker: Anyone who leaves an office light or computer on overnight is ticketed and assessed a small fine that goes to charity.

TALE OF THE TAPE — First Honda of America was blistered in a PBS "Frontline" documentary that claimed it intentionally ran a U.S. supplier out of business. Then National Public Radio passed on the charges in a feature about the TV program. The documentary claimed Honda yanked a stamping contract from Ohio-based Variety Stamping Corp. in 1988 and gave the business to a Japanese affiliate, Kikuchi Stamping Co., which also operates an Ohio plant. Honda sent urgent letters to PBS stations around the country saying the story was erroneous. Honda says Kikuchi got none of Variety's business, that Variety's parts are now being made by other American companies, and that Variety shipments accounted for more than half of all rejected parts at Honda when the contract was pulled. In NPR's story, "Frontline" producer Martin Koughan said he had proof Honda is lying, but he didn't share it. Honda is asking him. Stay tuned.

SALES

Big 3 regain market share

continued from PAGE 1

incentive programs, dealers tend to boost sales in the final 10 days of every month.

Fleet sales helped prop up November's total, although they were down at Ford Motor Co. Sales of U.S-built cars, including Japanese transplants, jumped 16.1 percent in the Nov. 20-30 period.

Chrysler Corp. sales included an increase in fleet sales of its larger cars.

For the first time this year, the Japanese market share fell below its year-earlier figure. The share going to Japanese companies in November was 24.7 percent, 1.2 points behind the year-ago month.

American Honda accounted for most of the decline, even though the Accord continued to be the top-selling car for the month.

Sales for the Honda brand plunged 30.4 percent below an unusually strong year-ago month. Honda had dealer incentives on Accords a year ago and no incentives last month. Spokesman Michael Ackerman said Honda also has been short of new Civics, which didn't go into production in Ohio until early October.

Thirteen nameplates posted improved monthly numbers. Some marked a turnaround from a poor performance so far this year — especially Chrysler brand cars, which were up 29.0 percent for the month although they were down 35.2 percent for 11 months.

Besides an increase in fleet sales, Chrysler Corp. set a November record for sales of minivans, at 30,941. Chrysler also has an extensive menu of customer incentives, including a separate program for the Northeast sales zone that began Nov. 16.

Chrysler Corp. was the only Big 3 company that managed to top the year-ago month. The gain was 70 units as an increase in light-truck sales offset a decline in car sales.

General Motors sales were 2.7 percent behind the year-ago month, but several of GM's new cars posted big increases. They included the Cadillac Seville, the Pontiac Bonneville, the Oldsmobile Eighty-Eight Royale and the Buick LeSabre. All three brands in the Buick-Oldsmobile-Cadillac Group showed a November gain. So did Saturn, compared to its slim start-up sales last year.

Ford Motor Co. sales were off 7.5 percent in November.

Mitsubishi posted a monthly sales increase of 27.5 percent. Spokesman Kim Custer acknowledged that fleet sales played a role, but he said sales of recently introduced models like the Expo and Expo LRV helped.

For 11 months, Mitsubishi was 0.6 percent ahead of last year. That's stronger than it looks, considering that after 11 months last year, the company was 33.7 percent above 1989.

JAGUAR

Losses continue; Scheele appointed

continued from PAGE 1

pressure worldwide, Ford can ill-afford the blank check it will take to upgrade Jaguar's 10-year-old lineup. And yet, analysts agree, it can't afford not to.

"Jaguar's condition is absolutely hideous," a London-based analyst said. "They are under pressure on every front and need billions to modernize their lineup. Ford must either turn hard and shut Jaguar down or find more money to put into them. They can't afford to wait."

Ford is known to be pinning much of its hopes for Jaguar's future on an all-new downsized model that could share a platform with one of Ford's European models. Although a Jaguar spokesman insisted earlier this year that the so-called Baby Jag "definitely" is in the company's mid-1990s new-product lineup, he conceded that the car had not been committed to production.

Hayden and Grant had been tasked with modernizing Jaguar's archaic production system and with developing a long-range product plan for the company.

Hayden, Ford of Europe's former vice president of manufacturing, launched a far-reaching restructuring of Jaguar's operations aimed at sharply improving efficiency and boosting output. Frequently quoted as being "appalled" at the state of Jaguar's manufacturing plant when he took over, Hayden has since drafted a sweeping development plan that would boost output to 150,000 units a year from peak production of 51,939 in 1988.

But many London-based analysts say they are appalled at what Ford has done to Jaguar in the name of efficiency. Despite Ford's promises to safeguard Jaguar's unique character and soul, they say, it is turning Jaguar into a "mini-Ford."

"Some of the things that Ford is doing to Jaguar make me shiver," said industry analyst Karl Ludvigsen, himself a former vice chairman of Ford of Europe.

"I'm concerned that they are over-Fording Jaguar. It is losing its identity. Jaguar has its own special character, and I don't see how they can replace that." ■

Staff Correspondent Ed Wendt in London contributed to this report.

GM recalls cars for belt, brake ills

DETROIT — General Motors is recalling about 911,000 cars to correct problems with front seat belts and parking brakes.

The recalls cover:

- About 830,000 Chevrolet Corsicas and Berettas built in the 1989-1990 model years and a portion of the 1988 model year; the front belt shoulder retractors will be replaced. GM said the pendulum mechanism that locks the shoulder belt during a sudden stop may not work due to a broken mounting base.
- About 60,000 1991 Chevrolet Cavaliers and Pontiac Sunbirds to replace front door striker studs that do not meet design specifications. The studs help keep front doors in place during a collision so the door frame won't collapse.
- Parking brake assemblies on about 21,000 1991 Buick Park Avenue and Ultra models, 1991 Oldsmobile 98 Elite and Touring Sedans, and 1992 Buick LeSabres, Pontiac Bonnevilles and Oldsmobile 88 Royales. GM said the parking brake may partially release after being set. ■

Ford recalls trucks for emissions fix

DEARBORN, Mich. — Ford Motor Co. is recalling about 21,000 1985 and 1986 Broncos, Econoline vans and F-Series light trucks that may exceed federal emission standards.

The vehicles are equipped with 4.9-liter engines built for sale in high altitude areas. Dealers will replace the spark plugs and install a vacuum retard delay valve. ■

740 series	$1,750-2,500
940 series	$1,500-2,500
780 coupe	$2,500

Ford extends buyer rebates

LIZ PINTO

Staff Reporter

Ford Motor Co. has extended its customer rebates and cut-rate financing programs on many vehicles through Feb. 4.

Chevrolet boosted the buyer incentive from $300 to $500 on 1992 Cavalier models until Feb. 4.

Ford is offering buyer rebates of $500 to $1,000 on many 1992 models and $400 to $2,000 on some 1990-91 models. While many models retain their former rebates, the payments on the 1992 Ford Probe, Taurus SHO and Crown Victoria and Mercury Grand Marquis have been increased from $750 to $1,000. New to the list is a $1,000 incentive on the 1992 Econoline with the RV package.

For 1990-91 Ford Division models and 1991 Mercury models, most incentives remain the same as in the previous program. But the Ford Escort, Mustang and Thunderbird increased from $400 to $750, as did the Mercury Tracer and Cougar. The Mercury Capri rebate rose to $2,000 from $1,000. The $2,000 incentive on 1991 Lincolns was not renewed.

incentive
WATCH

Buyers in the Chicago and Kansas City regions can obtain 2.9 percent financing for loans up to 48 months on the Escort or Tracer. The offer ends Jan. 3.

The Aerostar is offered to Northeast residents at a 2.9 percent rate or a $1,000 rebate through Dec. 31.

American Suzuki Motor Corp. has extended its dealer incentives until Feb. 3. Incentives on 1991 and 1992 Swifts are unchanged.

The 1992 Sidekick has rebates of $300 to $700, and the 1991 carries rebates of $500 to $1,000.

Last week, Saab Cars USA extended its Flexible Finance Program for 1992 Saab 9000s and 900s through Dec. 31. The program allows consumers to choose interest rates of zero to 10 percent with monthly payments based on their down payment.

A financial contribution is required by the dealer. ■

SKINNER

New chief of staff is pragmatic

continued from PAGE 4

ner will will respond to arguments to limit Japanese imports.

"If you've got a good point to make against the Japanese, you will get a chance to make it" with Skinner, a trade analyst said.

Because of that, the choice of a new secretary of commerce to succeed Robert Mosbacher — named last week to head Bush's re-election campaign — could be crucial in determining the future course of U.S.-Japanese trade negotiations.

Skinner's appointment as Bush's chief aide, announced last Thursday, has temporarily created a leadership vacuum at the Department of Transportation. His departure comes on the heels of several recent moves at the department, including the appointment Deputy Secretary Elaine Chao to head the Peace Corps, the recent confirmation of James Busey to replace Chao, and the nomination of National Highway Traffic Safety Administrator Jerry Curry to replace Busey as head of the Federal Aviation Administration.

Curry's appointment has been put on hold in the Senate, probably until after the first of the year.

Busey, who was sworn in as deputy secretary only last Wednesday, will become acting secretary upon Skinner's departure. Busey, 59, was a career Navy officer until he took over at FAA in 1989. He has been regarded as Skinner's eventual successor as transportation secretary, and he heads the list of candidates for the permanent job.

Also named as possible successors have been Federal Highway Administrator Thomas Larson; Louisiana's recently defeated Republican Gov. Buddy Roemer, who has been active in transportation issues both as a former congressman and in the National Governors Association; Congressman John Paul Hammerschmidt, R-Ark., a sponsor of the recently approved $151 billion federal highway bill; and former Congressman Stan Parrish of Virginia.

Meanwhile, officials at NHTSA say the agency has a full agenda for the next several months and they don't anticipate any major hitches while new leadership is being put in place.

NHTSA's key task will be meeting a May 31 deadline for a series of safety regulations required under the new highway bill, said Barry Felrice, NHTSA's associate administrator for rulemaking. ■

INCENTIVE WATCH — CUSTOMER INCENTIVES

NEW PROGRAMS

FORD MOTOR CO.

1992 models

Expires Feb. 4. In lieu of rebates, finance rates of 2.9 to 7.9 percent are offered. Finance rates differ by vehicle lines and regions. No finance rate incentives on Lincoln models.

Ford Festiva, Tempo, Taurus	$500
Escort GT and LX-E, Mustang, Thunderbird	$750
Probe, Taurus SHO, Crown Victoria	$1,000
F series, Aerostar	$500
Ranger	$750
Aerostar (Northeast), Bronco, Econoline (RV pkg.)	$1,000
Mercury Topaz, Sable	$500
Capri, Tracer LTS, Cougar	$750
Grand Marquis	$1,000
Lincoln Town Car, Mark VII, Continental	$1,000

Pre-1992 models

1990-91 Ford Division models and 1991 Lincoln-Mercury models. Expires Feb. 4. In lieu of rebates, finance rates of 2.9 to 7.9 percent are offered. Finance rates differ by vehicle line and region.

Ford Tempo, Taurus	$400
Taurus SHO	$600
Escort, Mustang, Thunderbird	$750
Festiva, Probe	$1,000
Ranger, F series, Aerostar, Econoline (except E-150 RV)	$400
Aerostar (Northeast), Bronco, Econoline E-150 (RV pkg.)	$1,000
Mercury Topaz, Sable	$400
Tracer, Cougar	$750
Capri	$2,000

CONTINUING PROGRAMS

CHRYSLER CORP.

All programs expire Dec. 31. Finance rates in lieu of rebates start at 6.9 percent on minivans, 4.9 percent on other models.

In addition to the rebates on retail purchases listed here, Chrysler Corp. offers rebates under its Gold Key Plus Program. The rebates, which expire Dec. 31, are $250 to $2,000 on 1992 models and $150 to $1,975 on 1992 models.

1992 models

Nader slows Curry's move to head FAA

MAX GATES

Staff Reporter

WASHINGTON — Jerry Curry's running feud with auto safety advocates has apparently left in limbo Senate confirmation of his nomination to head the Federal Aviation Administration.

Curry, head of the National Highway Traffic Safety Administration, was named by President Bush on Nov. 22 to the top FAA post. His nomination had appeared headed for swift Senate approval.

But at the request of Ralph Nader, Sen. Howard Metzenbaum, D-Ohio, used his Senate privilege and put a hold on Curry's confirmation vote, cutting off quick approval by the full Senate. A full hearing would give Nader and others a high-profile forum to criticize Curry and NHTSA.

Curry has told his NHTSA staff that he likely will be on the job until the end of the year. The Senate returns to work in January.

Senate confirmation was earlier held up by Sen. Richard Bryan, D-Nev. Curry had opposed Bryan's bill to increase corporate average fuel economy standards.

But Curry made a trip to Bryan's office on Capitol Hill before Thanksgiving, joking his staff, "I'm going to see if I remember my Groveling 101." After the visit, Bryan dropped his opposition to the Curry nomination.

Sources said Nader spent several hours on the telephone the day before Thanksgiving, seeking a senator who would delay Curry's confirmation vote. He eventually found Metzenbaum.

Nader believes Curry has not been tough enough on car manufacturers over safety issues.

Speculation on Curry's successor continues to center on Kate Moore, assistant secretary for budget and programs at the Department of Transportation. ■

ISUZU

Management team includes GM men

continued from PAGE 3

won't happen.

There also has been speculation that Isuzu might quit the passenger-car business altogether and concentrate on its strength in the commercial and sport-utility fields.

"I don't think they will," said Johnson.

"It is up to the management to decide, but (Isuzu) is the heart of the Geo franchise," he said. "The Storm is the most successful product in the franchise."

Although the Storm is based on the Isuzu Impulse, its U.S. sales dwarf Impulse volume.

GM sold 68,831 Storms in the United States through October, compared to 2,816 Impulses for Isuzu.

The Japanese press reported last week that Isuzu expects to lose 28 billion yen ($215 million) before taxes in the fiscal year through next October.

That would be down from projected losses of 49 billion yen ($377 million) in the just-ended fiscal year.

Isuzu said it expects to sell 511,000 cars and light trucks during the current fiscal year, an increase of 2 percent over the previous year. ■

GM ups stock offer, sells $1 billion

DETROIT — General Motors last week sold $1 billion of its new non-convertible Series B preference stock with a 9.125 dividend rate.

Prior to the sale, GM doubled the size of the stock offering to $1.5 billion, including shares not sold in the initial sale.

Separately, Fitch Investors Service rated the non-convertible Series B stock offering at A-plus, its fifth tier, citing GM's losses and efforts to reduce costs. ■

November build tops last year

ANNE E. WRIGHT
Chief Statistician

November car and truck production in the United States and Canada dropped 20.6 percent from October's build, but it topped the year-ago month by 4.4 percent. So far this year, production trails the 1990 period by 10.4 percent.

U.S. car production in November was 22.3 percent below October. It was the lowest build for that month since 1982.

Canada's car production in November was the lowest since 1988. November's total slipped 17.9 percent below October and 25.9 percent below the year-ago month.

U.S. truck production for November was 22.6 percent below October's total but was 14.7 percent higher than the same month in 1990.

November truck production in Canada was 3.8 percent below October but was 28.2 percent above the year-ago month.

The Big 3 scheduled overtime at 14 plants last Saturday. General Motors topped the list with eight assembly plants in the United States and two in Canada working extra hours.

GM's U.S. facilities on overtime were the Detroit-Hamtramck, Mich.; Wilmington, Del.; Lansing, Mich. (M); Flint, Mich. (Buick City); and Lordstown, Ohio, car plants and the Janesville, Wis.; Moraine, Ohio, and Lordstown, Ohio, truck plants. In Canada, the Scarborough, Ontario, and the Oshawa, Ontario, truck plants worked last Saturday.

Ford Motor Co.'s Louisville, Ky., and Kansas City, Mo., truck plants were scheduled to work both daily and Saturday overtime last week.

Chrysler Corp. scheduled overtime at the Newark, Del., car plant and the St Louis (No. 2) truck facility.

Last week, U.S. car and truck producers' estimated output soared over the prior week, which included the Thanksgiving holiday. Cars were up 81.7 percent, and trucks were up 69.7 percent.

Year-to-date car production is 12.6 percent behind 1990's build. Truck production trails 1990 by 11.1 percent.

Canada's car and truck production rose 2.2 percent above the prior week but fell 7.8 percent below the year-ago week.

So far this year, car and truck production in Canada trails 1990 by 2.2 percent. Cars are down 2.3 percent, and trucks are off 2.2 percent.

GM has added the Shreveport, La., truck facility to the list of plants closed early for the Christmas holidays. The Shreveport plant will be idled this week and is scheduled to resume production Jan. 6.

Other GM plants closed for December are the Van Nuys, Calif., and Willow Run, Mich., car facilities, which were idled the week of Dec. 2. ■

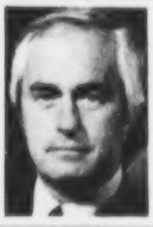
late news

Penske joins Gala roster

DETROIT — Automotive entrepreneur, motorsports legend and megadealer Roger Penske will address the Automotive News World Congress Gala dinner Tuesday, Jan. 14.

The subject for Penske's speech is "Entrepreneuring — Corporate America's Lasting Frontier."



Penske

Penske has made big successes of the Hertz Penske rental trucks, Longo Toyota and Detroit Diesel Corp.

The World Congress runs Jan. 12-15 in conjunction with the North American International Auto Show.

Another story on World Congress begins on Page 3.

Big 3 sales off 13.8 percent

DETROIT — The final month of a bad year has started off badly. Big 3 sales of 183,166 cars and trucks during the first 10 days of December was 13.8 percent behind a year ago.

Ford Motor Co. reported car sales of 29,520 units, a decline of 30.4 percent from 42,419 last year. Ford truck sales fell 14.3 percent to 28,998, against 33,850 a year ago.

Chrysler car sales fell 30.1

GM cuts could be huge

A-body and F-body cars among possible victims

EDWARD LAPHAM
Managing Editor

General Motors plans to announce a new round of North American cost-cutting measures this week that likely will include plant shutdowns and the elimination of up to 20,000 white collar jobs. Two entire vehicle platforms — the A-body and F-body — also are believed to be at risk.

Analysts and industry executives say they also expect a shakeup of GM's top leadership to result from the restructuring.

Prompted by investor uncertainty, GM Chairman Robert C. Stempel last week issued a terse statement that the giant automaker this Wednesday will announce relevant parts of a "comprehensive program to improve profitability and cash flow in 1992 and beyond."

This year has been a tough one for GM. For the first three quarters of the year, the automaker reported a net loss of $2.21 billion, more than the $1.99 billion it lost in all of 1990.

GM's car and light-truck sales in the United States slumped 13.2 percent for the first 11 months of the year to 3,996,104, and its market share slipped to 35.1 percent from 35.6 percent.

Last week, GM delayed closing a $1 billion preference stock offering due to the cost-cutting discussions and the need to disclose more information.

GM's board met last Monday, Dec. 9, to consider cost cutting measures, but it failed to announce any at the close of the meeting. After two days of investor unrest and a fall in GM's share price to a four-year low of $27.50, Stempel announced that he would disclose the details this Wednesday.

At stake are 290,000 blue collar and 100,000 white collar jobs in North America.

Even if GM takes a fourth-quarter write-off of as much as $2.5 billion, the cuts are unlikely to be enough to stanch North American losses, says one automotive analyst. There could be another round of cuts after the first of the year.

It is going to take time to turn the North American operations around.

"You are not going to see a fat and happy and profitable GM in six months," said automotive analyst Maryann Keller, managing director of Furman Selz Inc. in New York. "It will take five years."

Keller said GM's biggest problem is the Chevrolet-Pontiac-GM of Canada Group, "which has been losing billions (of dollars) for years" and needs to consolidate product lines and use platform development teams.

Keller believes Wednesday's announcement will be near-term cuts that GM must make to appease investors and rating services like Standard & Poors and Moody's, which have reduced the ratings and placed GM's debt and commercial paper ratings under review.

"The real problem is how GM can go from 40 man-hours per car to 21 man-hours per car like Ford," Keller said. "GM has been the high-cost

Mazda to have 'American' cars

RICHARD JOHNSON
Staff Reporter

Mazda goes domestic > 43

TOKYO — Mazda Motor Corp. likely will begin exporting U.S.-built 626s to Europe next year and sell a rebadged version of Ford's German-built Escort in a bid to compensate for its lack of a plant there, according to company sources.

Mazda, which will sell some 300,000 cars in western Europe this year, is the only major Japanese carmaker without a plan for European production.

Years of talks with Ford Motor Co., which owns 25 percent of Mazda, have so far failed to yield a joint production accord. And Mazda executives say their low European volume does not warrant the expense of going it alone.

Mazda officials confirmed here last week that Ford's plant in Saarlouis, Germany, is the prime candidate for the production consignment deal, and that the two partners are discussing assembly of a 1.5-liter class vehicle.

Meanwhile, a Mazda spokesman confirmed that the company is "seriously studying" a plan to export vehicles from its plant in Flat Rock, Mich., to Europe.

Talks with Ford aimed at joint-venture production of Mazda's 626 in Europe were discarded last year.

According to Japanese press re-

Joint ventures falter

Profits are scarce, cultures collide

LINDSAY CHAPPELL
Staff Reporter

The bright idea of carmaking in the 1980s — factories run jointly by two competitors — is in trouble.

Of the four North American automaking joint ventures, one has been dissolved, a second will expire in four years, and a third has been operating undercapacity since it launched in 1989.

The fourth draws rave responses from its two partners, General Motors and Suzuki Motors Ltd. But it, too, has lagged behind projections, and the U.S. government is pressing for changes that could add to its costs.

The original idea behind joint manufacturing ventures was to split the huge cost of launching factories and to share ideas and technology between partners.

Saving money may still be a valid goal. It costs $600 million to $800 million to open a new factory. But carmakers already have gone to school on each others' methods, and selling cars to one another may be a more efficient way to share factory costs.

The joint venture idea has never fully panned out.

- In October, Chrysler Corp. sold its share of its only North American joint venture, Diamond-Star Motors Corp., to Mitsubishi Motors Corp. Chrysler officials said the $650-million venture cost the company $400 million in losses over three years.
- Fuji Heavy Industries Ltd., which owns 51 percent of Subaru-Isuzu Automotive Inc. in Lafayette, Ind., reported earlier this year that it had lost $15.8 million on the

VW taking Polo subcompact up market

Spied in Wolfsburg, Germany, recently, Volkswagen's all-new Polo marks a dramatic styling departure from its boxy predecessor. Passat-like in appearance, the new Polo is scheduled to appear in the fall of 1992 as a 1993 model. VW is repositioning the subcompact up market with power steering, automatic transmission, air conditioning and anti-lock brakes featured on mid-range models. The new Polo will be two inches wider and longer than its predecessor.

Honda will allow gasohol

WASHINGTON — Honda North America Inc. has agreed to rewrite its automobile owner manuals after Sen. Tom Daschle, D-S.D., complained that the company unjustifiably discouraged motorists from using gasohol.

The new manuals will make clear that gasohol and other cleaner-burning oxygenated fuels approved by the Environmental Protection Agency can be used without voiding Honda's warranty.

Honda manuals now in use warn that engine damage caused by those fuels would not be covered under the warranty.

Former dealer sues Toyota

LOUISVILLE, Ky. — Darrell Wade Swope, a former Toyota dealer in Kentucky, is suing Toyota Motor Sales U.S.A. Inc. and its subsidiary, Toyota Motor Distributors Inc. for $125 million.

Swope charges in the U.S. District Court action that Toyota forced him out of business in September 1989 after 15 years as a Toyota dealer in Louisville. The allegations include breach of contract, false sales reporting and misallocation of vehicles.

A Toyota spokesman said that the company was investigating the case and that it would "vigorously defend itself."

The suit was filed Dec. 6.

— Kristine Stiven Breese

Chrysler looks for more trucks

WARREN, Mich. — Chrysler Corp. is seeking additional truck assembly capacity as it prepares to launch a new full-sized truck in the 1994 model year.

The company has not yet determined if it will expand an existing plant or build a new assembly plant in North America or Mexico.

"At this point, all options are open," said Chrysler President Robert Lutz, speaking to reporters after a ceremony marking the assembly of the 100,000th Dodge Ram Cummins turbodiesel pickup.

The need for additional truck capacity is being driven by strong sales of the mid-sized Dodge Dakota pickup and anticipated volume of the T300 full-sized Dodge pickup bowing in the 1994 model year, Lutz said.

Jaguar XJ6 gets air bag for 1993

MAHWAH, N.J. — Driven by marketing necessity, Jaguar has cut four years from its original timetable and will include air bags in XJ6 sedans sold in the United States beginning with the 1993 model year.

"From a marketing point of view, you have to have air bags," said Michael Dale, president of Jaguar Cars Inc., the Jaguar importer.

Passenger-side bags will be standard in 1994 cars. As recently as a year ago, Jaguar did not plan air bags for the XJ6 until 1997.

Dale attributed the quick change to engineering power from Ford Motor Co., which owns Jaguar Cars Ltd.

Driver-side air bags are standard in the XJS coupe and convertible. The company is developing passenger-side bags in that range.

Toyota adding 4x4 at NUMMI

Toyota Motor Corp. expects to reach full production on U.S.-made pickups by next summer as it adds a 4x4 pickup in February.

Toyota expects to build about 8,300 4x2 and 4x4 trucks a month, a rate of 100,000 a year, by mid-year. The line, recently launched at New United Motor Manufacturing Inc. in Fremont, Calif., now builds about 850 a month.

Toyota spent $350 million to introduce trucks at NUMMI, a 50-50 joint venture between Toyota and General Motors. The new line will be operated by the joint venture, but the investment and the trucks built are exclusively Toyota's.

Truck-line employment will rise from 500 now to 700 shortly after the 4x4 is added.

Hyundai revises rebate plans

FOUNTAIN VALLEY, Calif. — Hyundai Motor America last week sweetened its consumer incentive program.

Hyundai added the 1992 Excel to the program with a $500 consumer rebate. The company also boosted the rebate on 1991 Excels from $750 to $1,000.

Also added a $500 rebate to the 1992 Scoupe. Rebates on all 1991 Scoupes except the SE model were raised from $750 to $1,000.

The incentive on 1991 Sonatas, excluding the SE, was increased from $1,000 to $1,500.

Hyundai's program expires Jan. 6.

briefly

Pontiac has hot Salsa

The **Pontiac** concept car Salsa debuts officially in Detroit in January, but it's a California car at heart. A preview in Los Angeles last week was, like, totally awesome, dude. The car was neon orange and electric blue (photograph on Page 44), and Pontiac's staff wore beach or aerobic wear. Even Pontiac General Manager John Middlebrook went tieless. Food followed the theme, with lots of tacos and salsa. But maybe it was carrying a metaphor too far to serve a flan dyed blue and topped with orange whipped cream. Gnarly, dude.

SAYINGS OF CHAIRMAN LEE — *Chapter 74.* **Chrysler's** Lee Iacocca is rumored to be angling for a post-retirement job in President Bush's administration. If he gets one, he won't be licking any boots. In Washington last week, the chairman said: "The mere fact that we're going (to Japan with the president) is a recognition that something is wrong. For a Republican administration, that's real progress." Then he compared Bush's lack of action on the economy to President Herbert Hoover's attitude in the early years of the Great Depression.

COLOR IT WHITE — For the first time in nine years, white was the No. 1 color choice for all classes of North American vehicles, according to Du Pont Automotive Products' annual survey. An average 22 percent of consumers picked white for all car categories and light trucks. It even displaced red as the top choice of sporty/compact car buyers. Blue, black and silver did well. Robert S. Daily, Du Pont's finishes color marketing manager, predicts a trend toward rich, deep green for larger cars and trucks; continued trendiness for turquoise, aqua and reds; and yellow likely to emerge as a fashionable color in three to five years.

SAYINGS OF CHAIRMAN LEE — *Chapter 75.* America's industrial leaders have been criticized for taking home huge salaries in bad times. On the CNN network, Chrysler's chairman said he is being paid as if he were a ".350 hitter . . . when it turned out in the last two years I've been a .215 hitter."

SAYINGS OF CHAIRMAN LEE — *Chapter 76.* When UAW workers decided not to give up their $600 end-of-the-year bonuses, Chrysler gave the same bonus to white collar workers. The chairman said: "That cost us $11 million to $12 million. But then, what's that when you're losing the kind of money we're losing."

LEXUS DUMPING — Ford President Philip Benton got a lesson in pricing when he met with reporters for lunch last week. Benton told reporters Ford needs more luxury cars in its stable — cars similar to the **Lexus** LS400 sedan and the SC400 coupe. "What about the new Mark VIII; won't that be your Lexus SC400 fighter?" Benton was asked. No, he said, the Lexus is a lot pricier than that. Ford needs something more expensive than its family of Lincolns. Impertinent reporters gave him a shocker. The SC400 retails for $37,500, Benton was told, compared to $36,340 for its high-end Town Car. To which he replied: "They are dumping that (Lexus), aren't they?"

Benton: bargin minded

Chrysler cash will keep sales staff

But dealers say company should foot entire bill

JOSEPH BOHN
Staff Reporter

Chrysler Corp. dealers support the company's proposals to reduce their salesperson turnover, but think Chrysler should ante up more money for the program.

Five manufacturers now have programs to curb turnover rates for salespersons, running upwards of 50 percent in the industry.

They include Volkswagen of America, Audi of America, Mitsubishi Motor Sales of America, Volvo Cars of North America and General Motors, slated to start its program Jan. 1.

Chrysler has proposed a new program that would take effect early in 1992. As outlined to its dealer councils, the plan would:

- Pay certified salespersons $50 a vehicle and another $50 for dealerships achieving their Sales Satisfaction Index objective. The SSI judges a customer's satisfaction with their purchase experience with the dealership as whole.
- Have dealers co-fund payments by 50 percent unless 70 percent of their sales force has been certified and achieves its SSI objective. The latter would have 100 percent of program costs paid by Chrysler. The SSI here judges customers' satisfaction with their salespersons.
- Distribute cash payments in three equal installments over an 18-month period.

"I think with all the new products coming to Chrysler, the timing for this program is very important," said Phil Brown, a principal in Bud Brown Chrysler-Plymouth in Overland Park, Kan., and 1991 chairman of the Chrysler-Plymouth dealer council. "We've got to make sure we've got good salespeople on the floor to handle the customers we hope to attract with the new Jeeps and LH cars, so they get off to a good footing."

Joe Ricci, owner of Precision Jeep-Eagle in Detroit and 1992 vice chairman of the Jeep-Eagle dealer council, agreed. "We've got to get on it (a plan) and get on it quickly."

"Everybody else is going to it," Ricci added. "The salesman is your first-line guy out there. If we want to be competitive in the '90s, we've got to pay. You can't get a guy for minimum wage anymore."

Still, dealers like Brown, Ricci and Frank Galeana, owner of Van Dyke Dodge in Warren, Mich., and national chairman of the Dodge Dealer Council, feel Chrysler should fully fund the plan.

Galeana said co-funding the program would force him to change his pay plans.

"If Chrysler initiates this program nationally, we (dealers) would all have to revise our pay plans across the board," he said.

Ricci said co-funding would open dealers to lawsuits from employees discharged before collecting their entitlements under the plan.

Instead of a basic $50 per vehicle payment the first quarter after a car's sale and another $50 a year later, Ricci said Chrysler should make three payments of $50 or a one-time $150 payment. The first payment should come within a month to three months after the sale; the second after a year and the third after two years.

A salesman who sells an average 100 cars a year could accumulate $30,000 over three years, Ricci said.

Whether Chrysler can afford those kind of payouts is debatable.

Ricci feels that since one-third of those entering the business end up leaving simply because they are not suited to it, the costs wouldn't be that high.

Also, he said, Chrysler could eliminate various salesperson incentives to fund the program. Chrysler runs such spiffs on certain models three or four times a year.

Dealers strongly favor tying any payments under the program to salesperson certification and customer satisfaction requirements.

Thus, a salesperson would have to undergo Chrysler's training and certification program and score well in customer feedback surveys to qualify for money under the plan.

Chrysler's certification program requires training in product knowledge, sales techniques and a minimum Sales Satisfaction Index score, among other things.

Chrysler already has begun tying regular incentive program payments to certification. Since Oct. 1, salespersons who are certified earn twice as much under any salesperson spiff than those who aren't. ■

JOE WILSSENS/AUTOMOTIVE NEWS

Diesel milestone

Chrysler President Robert Lutz drove the 100,000th Dodge Ram pickup with a Cummins turbodiesel engine off the assembly line at the Dodge City assembly plant in Warren, Mich. An update on the light-duty diesel truck market appears on Page 23.

Pollution suit threatens Mexico trade pact

HELEN KAHN
Senior Correspondent

A lawsuit filed by environmentalists could disrupt U.S. trade negotiations with Mexico and other nations.

U.S. District Judge June Green in Washington will decide before Christmas whether the State Department's trade representative must assess the environmental impact of auto plants in Mexico on the air, water and soil of the United States.

The case rests on technical legal issues, but if environmentalists win, it could delay two agreements:

- A free trade treaty with Mexico that U.S. automakers have been espousing
- The latest revision of the General Agreement on Tariffs and Trade.

The three groups suing the government are concerned that GATT negotiations might result in weakening some U.S. environmental rules.

They fear clean air rules, CAFE standards and the gas guzzler tax could end up labeled as U.S. trade barriers by other countries. That could force changes in the U.S. rules without lawmakers having their traditional voice.

The groups also argue that the Mexican agreement could cause more pollution in the United States.

The demand for environmental impact statements is a way to force Congress to consider not only pollution along the border with Mexico, but also the whole issue of U.S. safety and health regulations as trade barriers.

The suit covers agricultural pollution as well as industrial, and Judge Green may make her decision based on tomatoes and pesticides rather than automobiles.

Existing treaties allow non-Mexican companies to set up factories and pay no duty on raw materials, components and machinery as long as the output of the plants is exported. Ford Motor Co.'s Hermosillo plant, which builds Escorts and Tracers for the United States market, is an example.

A new treaty would probably mean more factories and pollution in Mexico that could reach the U.S. via the wind and the Rio Grande River. Last year, 1,900 *maquiladora* companies were counted.

The government argues that none of the groups have "standing to sue" and that there is nothing to evaluate until a trade agreement is reached. Patti Goldman, an attorney for plaintiff Public Citizen, says it would be too late to raise environmental questions after an agreement is reached.

The suit was filed Sept. 4 and argued Nov. 18 by Public Citizen, the Sierra Club and Friends of the Earth.

Chrysler Corp., Ford and General Motors favor free trade with Mexico as long as an agreement includes strong local content provisions. Such provisions are needed to prevent Mexico "from becoming an export platform for third country vehicle manufacturers to produce cars and trucks for the U.S. and Canadian markets," according to a draft of a position paper the three companies are now revising.

The Big 3 already build cars in Mexico for the U.S. market, and free trade would let them expand sales in Mexico of their U.S.- and Canadian-made cars and trucks. Two import companies, Nissan and Volkswagen, also have plants in Mexico. ■

Sales of the Honda Accord were down 12,430 units in November.

Big tumble for Accord hurts niche

KRISTINE STIVEN BREESE
Staff Reporter

LOS ANGELES — Buyers stayed away from the Honda Accord and its competitors in the middle of the intermediate segment in November.

While the industry as a whole was down 6.6 percent for the month compared with November 1990, the middle-of-the-market segment, which is led by the Honda Accord and Ford Taurus, dropped 12.7 percent.

While it remained the best-selling model, the Accord dropped 12,430 units from November 1990, almost two-thirds of the decline in the segment.

Honda spokesman Bob Butorac noted that "it was a real slow month" but said last November was particularly strong, and therefore a tough standard to compete against. Honda ran a rare dealer incentive program on the Accord last November. There was no such incentive this year.

The industry is closely watching to see if Toyota can overtake the Accord with its all-new Camry. Camry sales were up 5.9 percent in November to 19,368 units.

Chris Cedergren, senior vice president at AutoPacific Group, a Santa Ana, Calif., auto consulting firm, said that while the Camry has already had some impact on the Accord, it is too early to tell what the long-term effect will be.

Voila! Saturn offers air bag

LINDSAY CHAPPELL
Staff Reporter

Saturn Corp. has surprised its early critics by rushing out a driver-side air bag option for its 1992 model cars.

The year-old carmaker was criticized when its products first appeared because they did not include air bags. Engineers said then that 1994 would be the earliest it could offer one.

But Saturn now says it has developed a driver-side air bag for this year's model that goes into production next month. The company will decide next year whether to offer it as an option or standard feature on 1993 models.

By the 1994 model year, both passenger and driver bags will be standard, said a company spokesman.

The spokesman said Saturn drew heavily on assistance from its parent company, General Motors, as it accelerated the air bag program.

"The real push was in getting the engineering resources to do it," he said.

The company has not determined what the retail cost will be for the option, and would not reveal who the supplier will be.

GM now offers 126 cars with standard driver-side air bags, representing 64 percent of its product line. The company has said driver-side bags will be standard on all cars by the fall of 1994. ■

Small shops likely to lose smog check business

MAX GATES
Staff Reporter

WASHINGTON — Tough new vehicle inspection regulations, required under last year's Clean Air Act amendments, will likely put smaller shops out of the inspection business in many states.

The Environmental Protection Agency, which is writing the new regulations for inspection and maintenance, is leaning toward rules that would require $150,000-$300,000 worth of equipment.

That would make it difficult for small volume shops to compete for that business, said Don Randall, Washington representative of the Texas-based Automotive Service Association.

"At this point, the chances of (smaller shops) continuing is poor, if not non-existent," Randall said.

The push for tougher inspection programs, known as enhanced I&M, is a cornerstone of efforts to reduce harmful emissions in states with pollution problems.

Motor vehicles account for about half of all hydrocarbon emissions, which contribute to the formation of ozone, and 90 percent of all carbon monoxide emissions, the EPA says.

A small percentage of cars produce most of the harmful emissions. California environmental officials estimate that 12 percent of cars produce 75 percent of the state's auto emissions.

While older models are often the heaviest polluters, the EPA estimates that half of all one-year-old cars and up to 70 percent of five-year-old cars exceed new car emission standards.

"We've been saying that a small number of cars make most of the pollution. If you catch those cars, you capture a large percentage of polluting cars and you could ease the pressure on new cars," said Janet Cohen, an EPA spokeswoman at the agency's emission testing lab in Ann Arbor, Mich.

However, current I&M programs in 35 states and the District of Columbia have been subject to abuse and been ineffective at reducing emissions, the EPA says.

An EPA audit last summer found widespread problems with current programs, including poorly trained testing and inspection personnel, improperly maintained or calibrated equipment, and slow and lenient state monitoring and enforcement.

Two-thirds of 75 testers from four different states passed vehicles that had been preset to fail I&M emissions tests.

Some of the ineffectiveness is due to abuses by inspectors.

Randall cited so-called "kick 'em, lick 'em and stick 'em" inspections, a reference to shops that pass cars of good customers without performing an inspection.

"Shops don't want to fail good customers. What that results in is that 30 to 70 percent of the time the existing system doesn't find cars that should be failed," Randall said.

On the other side of the coin, the EPA is considering barring shops from doing both inspections and the repairs needed on cars that fail. Doing both sets up a potential conflict of interest, with inspectors tempted to fail cars to generate business.

In addition, the EPA has found that centralized state programs are cheaper and easier to monitor for quality control.

Under the Clean Air Act, however, states choose between centralized, state-operated programs or decentralized programs.

Chrysler Corp. and the Motor Vehicle Manufacturers Association have gone on record favoring tough I&M requirements, in part because effective inspection programs could reduce the need for future improvements in emission control equipment.

About 100 areas now operate I&M programs, at a cost of about $500 million a year. Under the 1990 Clean Air Act amendments, the number of areas required to test vehicle emissions will rise to 153, about half of which will need "enhanced" or intensive inspection programs.

The EPA is scheduled to issue an initial decision next February, with final regulations due in April. States would then have until January 1993 to comply. ■

SERVICE

VW recalls Sciroccos, Cabrios

AUBURN HILLS, Mich. — Volkswagen United States Inc. has recalled about 51,000 1987 and 1988 Scirocco and 1987 through 1990 Cabriolet vehicles to repair faulty fuel tanks.

VW said a hairline crack could develop at a small section of a seam flange weld at the rear of the tank. The crack could let fuel leak out, which could cause a fire in a rear-end collision.

ASIA moving to new office

CHICAGO — The Automotive Service Industry Association is moving its headquarters from downtown Chicago to Elk Grove Village, Ill., on Dec. 30.

"Under our new lease, not only will our overhead rent expenses drop dramatically," said group President David R. Roland.

The new address is 25 Northwest Point, Elk Grove Village, IL 60007-1030. Phone number is (708) 228-1310.

Ford increases parts warranty

DEARBORN, Mich. — Beginning Jan. 1, Ford Motor Co. will increase the warranty on service parts to one year/12,000 miles for Ford, Mercury and Lincoln cars and Ford light trucks.

Service parts are currently warranted for 90 days/4,000 miles. In conjunction with the change, Ford is discontinuing its Lifetime Service Guarantee program.

Nissan cuts parts prices

CARSON, Calif. — Nissan Motor Corp. in U.S.A. has cut the suggested retail prices of 92 sheet metal, grille and bumper parts by an average of 31 percent. The change was effective Dec. 1.

Since January, the company has cut prices on 143 crash parts.

‡6/unlimited for Elan
**For warranty repairs after 3/40,000 coverage expires

Automakers revise warranty coverage

Domestic automakers overhauled their warranty coverage for the 1992 model year, revising terms and dropping deductibles to bring them closer in line with coverage offered by importers.

Changes by Japanese manufacturers were confined primarily to corrosion coverage. Among the changes:

■ General Motors changed basic coverage and powertrain warranties to 3 years/36,000 miles from 3 years/50,000 miles for Chevrolet, Pontiac, Buick and Oldsmobile vehicles, but eliminated a $100 deductible for warranty repairs after 1 year/12,000 miles. Basic coverage for Cadillac is 4 years/50,000 miles. Powertrain warranty for Allante runs for 7 years/100,000 miles.

■ Ford Motor Co. increased basic coverage to 3 years/36,000 miles from 1 year/12,000 miles for all Ford and Mercury cars.

The company dropped a $50 deductible.

■ Chrysler Corp. offers buyers a choice of warranty coverage terms. Buyers can choose between 1-year/12,000-mile basic and 7-year/70,000-mile powertrain coverage or 3-year/36,000-mile basic and powertrain coverage. Slightly different terms are offered on captive imports and the Plymouth Laser and Eagle Talon.

Service business declines

DETROIT — Parts and service business fell sharply in October from a year earlier as the Automotive News Service Index plunged to 94.0, its lowest point in more than 2½ years.

It was the fifth time in the last six months that service business lagged behind year-ago totals. Through 10 months of this year, service business was 98.7 percent of that for the same period in 1990.

The downward trend continued despite conventional wisdom that has owners coping with a recession by servicing their existing vehicles rather than buying new ones.

"The conventional wisdom is not always right," said John Tyson, vice president of corporate relations for SPX Corp. of Muskegon, Mich., a maker of repair parts and tools.

"People today don't feel good about the economy and they're not fixing their cars unless it absolutely quits," said Tyson, whose firm's brand names include Bear Automotive and Kent-Moore.

For October, all five categories in the index showed declines. Shop parts sales were off 8.8 percent, with sales of all parts and accessories down 6.8 percent and total labor sales falling 6.4 percent.

For the January through October period, only repair orders written show an increase, up 0.3 percent. Sales of all parts and accessories posted the largest decline for the 10-month period, off 1.7 percent.

None of the dealers surveyed who reported declines offered additional comment. Among the few noting increases, reasons cited included closure of other area dealerships, cost-cutting efforts and an increase in labor rates.

Figures used in the Automotive News Service Index are compiled from monthly reports on service and parts business from a cross-section of new-car dealerships. ■

SERVICE INDEX

94.0•

	Oct., '91 vs. Oct., '90	Jan.-Oct., '91 vs. Jan.-Oct., '90
Gross Profit on All Labor and P&A Sales	− 4.2%	− 1.1%
Repair Orders Written	− 1.5%	+ 0.3%
Total Labor Sales (Customer & Warranty)	− 6.4%	− 0.6%
Shop Parts Sales (Customer & Warranty)	− 8.8%	− 1.4%
Sales of All P&A	− 6.8%	− 1.7%

• Survey by Automotive News shows that dealers' service and parts business in October 1991 was 94.0 percent of business in October 1990. Service business in the first 10 months of 1991 was 98.7 percent of business in the corresponding period in 1990.

Virginia man presses case against destination charge

LINDSAY CHAPPELL
Staff Reporter

The factory destination charge on a new car's window sticker is supposed to be non-negotiable.

But someone out there wants to change that.

Stewart Pierce, a retired federal transportation manager, thinks carmakers are padding the charges and pocketing the difference. The Richmond, Va., man is filing his second lawsuit for a refund on charges he paid in his own new-car purchases.

Manufacturers average out the costs of moving all cars from factory to dealer lots so that consumers in Oregon pay the same shipping cost as consumers in Florida. Dealers turn the money over to the manufacturer, and theoretically neither makes money on it.

So far, though, the auto industry seems to be losing its argument with Pierce. Besides winning a settlement in his own case, Pierce has helped two other consumers win refunds in out-of-court settlements in the past two years. He's provided assistance to about 20 other consumers, and now he is trying to enlist the Senate Commerce Committee to rewrite the laws that govern destination charges.

Pierce, who helped write federal regulations on interstate commerce tarrifs 20 years ago, has no beef with the practice of averaging the costs. But he alleges that carmakers are inflating the averages and even including other costs in them, such as the expense of transporting parts to assembly plants.

He says Chrysler Corp. asks $485 to deliver a Plymouth Acclaim to a dealer when actual cost is $104.

"How does he know that's what it really cost?" asked a Chrysler spokesman, who couldn't confirm the $104 figure.

The Chrysler spokesman noted that distribution costs include more than just transportation from factories to dealerships. Cars usually move from plants to marshalling yards and sometimes to distribution centers before showing up at dealerships.

Pierce says even all that doesn't add up to what manufacturers charge.

He is currently suing Ford Motor Co. for a refund on the $490 he paid to buy a Taurus sedan made in Atlanta. The suit claims he should have paid less than $310.

A Ford spokeswoman says the company makes no money on its charges and predicts that the case will not get far.

Five years ago, after buying a 1986 Buick Century, he sued General Motors over the same thing. GM settled out of court, but not before a company executive had responded in a legal document connected with the case that the cost of parts shipping is included in GM's final destination charges.

In 1989, Pierce helped another consumer sue Chrysler for a refund, and settled that case out of court. He then helped an Illinois man sue Chrysler for another refund.

No sponsor has stepped forward for his proposed bill so far, which would require carmakers to limit destination charges to their actual cost and require the real cost to be spelled out on window stickers. ■

Honda world HQ may be in U.S.

Move could quell political pressure

RICHARD JOHNSON
Staff Reporter

TOKYO — Is Honda Motor Co. seriously considering moving its world headquarters to the United States, where the Japanese automaker sells two cars for every one it sells in Japan?

Honda President Nobuhiko Kawamoto said recently that the automaker was working to spin off a separate global headquarters to supervise regional subsidiaries around the world. That headquarters could be anywhere, including the United States, he said.

Some observers here think that Honda might go ahead — if for no other reason than political pressure in the United States.

Meanwhile, Kawamoto said he is committed to an even more independent Honda operation in the United States. He said that Honda would like to move product development for its upscale Acura franchise to America.

Kawamoto touched off speculation about Honda moving some headquarters functions to the United States during the Tokyo Motor Show in October.

In a speech, he said "the world headquarters function, which is now part of Honda Motor Co. in Japan, should evolve . . . to become a separate function."

Asked later if that meant the headquarters could be in America, he remarked "Everything is open. If the central area of business becomes the United States, we could move to the U.S."

The question has long been posed rhetorically in the United States: "If you're so American, why not move your headquarters to the United States?"

"It's a possibility," said analyst Stephen C. Usher of Kleinwort Benson International in Tokyo. "From a political standpoint, it wouldn't hurt."

Honda not only sells more cars in the United States than it does in Japan, but operates three assembly plants in North America.

Yet, the company is locked in a struggle to convince Americans that its ballyhooed "Americanization" is genuine.

The U.S. Customs Department is investigating whether Honda improperly avoided customs duties for cars it imported from Canada by producing cars with less than 50 percent North American content. Transferring a global supervisory role to the United States could send a powerful message, and one Honda official here conceded "that could be a factor."

Kawamoto said that while he is splitting up the Tokyo headquarters function, he is not ready to commit to putting the company's overseers overseas.

"What I'm trying to do is change the headquarters in this country to see how we can change and also decide the concrete time," he said.

Kawamoto interview ➤ 21

"I'm thinking about how we can separate the domestic market operations from the headquarters. These were jointly operated for 40-some years, so it is not easy to separate. But we've started."

Kawamoto said the move toward independent operations in the United States is well underway and added: "If this is successful I think it is rather easy to move to anywhere in the world."

He said the new headquarters must take more responsibility for coordinating worldwide operations. Honda officials here say the framework of the corporate restructuring that Kawamoto launched earlier this year is still being worked out.

"Our headquarters here still doesn't have a clear perception of what a global headquarters should be," said one official.

"We are in a transition stage," said a Honda spokesmen. "We are dividing Honda in Japan in two — Japanese headquarters and a headquarters with a global function. But that doesn't mean we are going to put it in the United States."

Usher said he is not sure moving the world headquarters is warranted.

"They've done an adequate job of managing the global enterprise from Japan," he said.

"You don't see IBM setting up a global management structure in Europe. All of General Motors' profits come from Europe, but they are not going to move out of Detroit."

The Japanese company's new regional product strategy calls for "self-reliant" localized development, engineering, sales and production in the United States, Europe and Japan.

Under the regional strategy, Honda will hatch the Accord-based Synchro sedan that will be produced in the United Kingdom next fall. The Accord station wagon was developed in the United States with U.S. consumers in mind. ■

Canada's Nov. light-truck, car sales show little gain

ANNE E. WRIGHT
Chief Statistician

Canada's light-duty vehicle sales in November were up 0.3 percent over 1990 as the up-again down-again pattern continued.

Since July, light-vehicle sales have consistently been up one month and down the next with both cars and trucks reflecting the same pattern.

But in November, truck sales were up and car sales continued to slip.

Truck sales rose 7.8 percent in November over the year-ago month and 2.5 percent over October.

For the calendar year, truck sales are down 3.9 percent from the same period in 1990.

Each of the Big 3 reported increases in truck sales as did Toyota and Mazda.

Toyota led the pack with a 35.4 percent increase. Chrysler gained 30.4 percent, followed by modest gains from Mazda, General Motors and Ford.

Car sales declined for the second month in a row. They were 3.09 percent below the year-ago month and off 10.7 percent from October.

Year-to-date car sales trail 1990 by 1.3 percent.

In addition to the strong increase in truck sales, Chrysler's automobile sales were up 7.4 percent in November.

Six importers reported vehicle gains for the month: BMW, 19.9 percent; Subaru, 17.8 percent; Mazda, 15.8 percent; Toyota, 11.0 percent; Jaguar, 10.0 percent; and Hyundai, 0.1 percent.

Importers suffering vehicle loses for the month included Mercedes-Benz, down 32.0 percent; Suzuki, 37.3 percent; Volkswagen, 20.5 percent; and Volvo, 24.5 percent.

Land Rover's sales were up 100 percent based on the sale of 18 vehicles, while Lada's sales were down 3.4 percent on sales of 85 vehicles. ■

Mitsubishi prices '92 Montero

Mitsubishi Motor Sales of America announced pricing last week for its redesigned 1992 Montero. The vehicle goes on sale in January.

Four models will be offered: the base model carries a $17,929 sticker price; RS, $19,599; SR, $22,429, and LS, $23,019.

Standard equipment on all four models includes the Active Trac shift-on-the-fly four-wheel-drive system, 3.0-liter single overhead cam V-6 engine, four-wheel power disc brakes and five-speed manual transmission on the base, RS and LS models. A four-speed automatic transmission is standard on the SR model.

Winter aids sales of Range Rovers

KAREN DETKOWSKI
Statistician

Of the 41 makes sold in the United States, only four reported increases in the *Automotive News* sales-per-dealer calculation for November.

Infiniti, Cadillac and Chrysler saw average sales rise by a unit, and the average Range Rover dealer sold five luxury sport utilities in November, two units better than October.

Every other line either held the same as October or declined in line with the seasonal pattern.

Range Rover's share of U.S. sales is tiny, but 379 sales made November the brand's best month for 1991.

"Our dealers worked real hard. This is 4x4 season," said spokesman Bill Baker of Range Rover of North America Inc.

Charles R. Hughes, president of the importer, credited the weather. "The weather is a considerable factor, as snow began falling four-wheel drive became a consumer priority."

Saturn Corp. remains number one in sales-per-dealer for any make that is sold in the United States.

The company sold 73 units per dealer in November, the same total as Saturn sold in October.

Saturn sales of 8,355 in November were off 9.7 percent from October, the highest sales reported by the company.

In November 1990, Saturn's first official month of sales, it recorded 641 units.

SALES

November totals decline 6.6 percent

continued from PAGE 3

It will be four to six months before we can assess the real impact of the Camry on the Accord," Cedergren said.

To beat Honda, Toyota will first have to knock off Ford Motor Co. and the Taurus.

The 1992 Taurus, which was revamped this fall, saw sales rise 4.9 percent in November to 23,041 units.

The No. 4 player in the segment, the Chevrolet Lumina, saw a tiny increase of 1.1 percent, to 14,059 units.

Some people blame the segment's problems on the recession, saying it has scared away the bread-and-butter buyers.

"Mr. and Mrs. Middle-Class America, the folks we rely on, are completely out of the market," said Don Hicks, owner of Hyundai, Subaru and Suzuki dealerships in a Denver suburb.

"The people that are coming in are the people that have no business buying a car.

"They have bad credit, no down payment, and they owe a lot more on their car than it's worth," Hicks said.

Hicks' Subaru store is the third-highest volume Subaru dealership in the country.

Subaru's entry in the intermediate segment, the Legacy, also struggled during November. Legacy sales for the month fell 44.3 percent.

Mazda readies domestic fleet

LINDSAY CHAPPELL
Staff Reporter

The race to build the first "Americanized" Japanese car now has an unexpected front runner — Mazda Motor Corp.

Mazda Motor Manufacturing (U.S.A.) Corp., the automaker's U.S. assembly subsidiary, says it will create a domestic fleet of vehicles next year at its Flat Rock, Mich., auto plant.

When new versions of its 1993 MX-6 and 626 start down the Flat Rock assembly lines early next year, they will contain more than 75 percent domestic content — a fact that will separate them from Mazda's "import fleet" for federal fuel-efficiency monitoring.

The change will mean little in day-to-day industry terms. But it will be a noteworthy milestone in the increasingly tense world of U.S.-Japanese trade relations.

Despite a decade of appeals from U.S. parts suppliers for more business, no Japanese carmaker has incorporated enough U.S. componentry to warrant the "domestic fleet" label from the Environmental Protection Agency.

Some transplants have walked very near the 75-percent line in the past two years, and individual cars have crossed it, but no Japanese car line has yet been considered domestic. In most cases, the Japanese manufacturers still import some of the vehicles they make in the United States. The Japanese versions, with much lower levels of U.S. content, are averaged together with the U.S. version to arrive at the content of the entire model.

Mazda stopped importing its MX-6 and 626 earlier this year, meaning the newly remodeled Flat Rock cars will stand on their own. Mazda plans to apply for domestic-fleet status with the EPA.

Honda of America Manufacturing Inc. reached 75 percent on its Accord made in Marysville, Ohio, this year. But that car also is imported in a version that contains very little U.S. content, which drags the whole fleet below the 75 percent average.

Toyota Motor Manufacturing U.S.A. Inc. expects to hit the 75 percent mark on its Georgetown, Ky.-built Camry next year. But that car is also imported.

Other lines have similarly come close. Nissan Motor Corp. makes a Sentra in Smyrna, Tenn., that is 74.6 percent domestic. Isuzu Motors Ltd. builds its Rodeo sport-utility in Lafayette, Ind., and reached 73 percent this year.

Mazda projects that its cars will weigh in at 76 or 77 percent domestic next year, an increase from about 70 percent last year. But a company spokesman cautioned that final numbers would not be known until the end of the 1993 model year because the figure depends on the sales mix of various options and their sources.

Mazda's projections surprise some observers because the company expects to surpass the 75 percent mark even if it doesn't source drivetrains — the most expensive component of a car — in the United States. The Mazda spokesman said the company may add Ford-built engines and transmissions to some cars, which would raise the figure further.

Mazda plans to double its use of parts stamped from U.S. steel. Other U.S.-made components next year will include air bags, glass, brakes and catalytic convertors.

Most of the other transplants near the 75-percent level use U.S.-built engines. Honda operates an iron and aluminum casting foundry to build engines. Toyota's plant machines and assembles engine components, and Isuzu purchases GM engines for the Rodeo.

The EPA uses the 75 percent mark to categorize models into either domestic or import fleets. ■

No agreement on content rule

There are different yardsticks for measuring domestic content, which contributes to a lot of heat when the subject comes up in political discussions.

The EPA uses broad rules that allow such costs as advertising, depreciation on equipment, and interest paid on loans to be included.

U.S. Customs does not allow some costs that EPA allows when it figures North American content for duty purposes. Parts manufacturers tend to define content strictly by the parts used in assembly. ■

Mazda takes lead with Navajo

Mazda became the first Japanese company to sell a domestic vehicle when it began distributing its two-door sport-utility, the Navajo.

Ford Motor Co., which owns 25 percent of Mazda, builds the truck, a version of the Ford Explorer, at Ford's truck assembly plant in Louisville, Ky.

The Environmental Protection Agency allows makers to report corporate average fuel economy for trucks as a single blended fleet instead of separate domestic and imported fleets.

MAZDA

Plans on imports, Ford cars in Europe

continued from PAGE 1

ports, production of Escort-based, Mazda-badged subcompacts will begin in 1995 at an annual rate of 100,000 units. Terms of an agreement are scheduled to be concluded by next spring.

A Mazda spokesman called the report "speculation."

"We are still continuing the discussions between Mazda and Ford" he said.

He said the two companies must still determine a production site, and settle on a car line, the level of production and the timing for the start of operations.

"It's all still under discussion," he said. He added that it is too early to say whether production will be contracted to Ford or if the partners would form a joint venture. However, he ruled out the possibility of Mazda building cars on its own in Europe.

"Such a thing will not happen," he said.

"It's a question of resources," said W. Wayne Booker, Ford's vice president of Asia-Pacific Automotive Operations. "If they built their own plant, as Nissan and Toyota have done, they would have to invest a substantial amount of money, probably more than they can cut off right now."

Saarlouis, considered one of Ford's most efficient European production sites, will be the likely production base, Mazda insiders say. The same complex had been considered for a joint production venture of 626-based Ford- and Mazda-badged cars.

But producing a version of the Escort instead of Mazda's similarly sized 323 will reduce product development costs and enable the Mazda-badged car to reach high local content levels much earlier.

The subcompact segment is considered better suited to Europe than the mid-sized 626 because of the emerging importance of the Eastern European market.

But in the larger class, Mazda is expected to sidestep European Community restrictions limiting Japanese imports to 1.23 million units per year for seven years beginning in 1993 by importing 626s from Flat Rock.

"We've not yet finalized it, but we are seriously studying exports of Mazda-badged vehicles to Europe," said a Mazda spokesman. "However, the timing and what models and numbers, these are under discussion."

Ford already exports Flat Rock-built Probes to Germany.

Booker said he hopes the European co-production talks with Mazda "are concluded over the next six months — either yes or no — because these studies that keep grinding on and on are a waste of resources."

"It is very difficult for me to say the timing of the announcement," said the Mazda spokesman. ■

Big 3 stockpiles climb to 80-day supply

JIM HENRY
Staff Reporter

NEW YORK — Inventories crept generally higher in November, as manufacturers struggled to balance production, down time and a better-than-average sales month for the Big 3.

The end result for inventories was an 80-day supply of cars and light trucks as of Dec. 1, versus 75 days a month earlier.

The supply of light trucks was fat but stable, at 88 days, even though November truck sales were only 3.3 percent below the year-ago month.

Chrysler Corp. was the only Big 3 company whose November sales exceeded the year-ago month, aided for a change by sales of its Chrysler Division cars. Fleet sales also helped. Chrysler's supply of U.S.-built cars was the lowest of the Big 3 at 62 days.

For the industry, cars were at 76 days, up from 68.

General Motors, which had several hot new models in November, had a 71-day supply of U.S.-built cars, compared to 67 a month earlier.

Cadillac stocks fell from 73 to 64 days, as new models propelled sales.

Ford Motor Co. reported a 78-day supply, down from 82. Ford Division shaved its truck supply from 94 to 78 days. ■

Inventor wins wiper suit against Chrysler

CHARLES M. THOMAS
Staff Reporter

DETROIT — Robert Kearns, the basement inventor who developed intermittent windshield wipers, won his second patent infringement suit in federal court, this time against Chrysler Corp.

Last week, a federal jury returned a verdict saying Chrysler infringed on four patents issued to Kearns. The 64-year-old inventor settled with Ford Motor Co. last year for $10.2 million. He has been embroiled in lawsuits with virtually every foreign and domestic automaker for 13 years.

"This reinforced the good feelings that I have about juries," said Kearns after hearing the verdict. "It was a very studious group that spent a lot of time before making its decision."

A second trial is slated to determine damages against Chrysler. Kearns is asking for about $39 million ($3 on 13 million vehicles) and an exclusive contract to manufacture and sell intermittent wipers to Chrysler for 12 years.

The jury found that Chrysler violated patents Kearns developed on the synchronized operation of the wiper blade; dwell time of the blade; use of a three-brush motor to adjust the speed of the wiper blade; and the use of a transistor with a relay to perform the braking function of the blade.

Kearns has said repeatedly that he hopes through his lawsuits to change patent law to better protect inventors. He wants courts to have the power to extend patents if inventors are involved in lengthy litigation but have pursued patent-infringement diligently.

Chrysler conceded that Kearns' patents were valid but argued whether their products infringed on those patents. Kearns said he equipped 20 vehicles with the device in 1978 and showed them to Chrysler, but they declined to give him a contract to build intermittent wipers for the company.

He first got the idea for a "windshield wiper that blinks" after losing sight in one eye when a champagne cork exploded unexpectedly on his wedding day.

Lawsuits are still pending against other automakers. Originally, the lawsuits were combined into one, but that was too cumbersome so U.S. District Court Judge Avern Cohn picked Ford as the test case.

INCENTIVE WATCH — CUSTOMER INCENTIVES

NEW PROGRAMS

FORD MOTOR CO.

1992 models

Expires Feb. 4. In lieu of rebates, finance rates of 2.9 to 7.9 percent are offered. Finance rates differ by vehicle lines and regions. No finance rate incentives on Lincoln models.

Ford Festiva, Tempo, Taurus	$500
Escort GT and LX-E, Mustang, Thunderbird	$750
Probe, Taurus SHO, Crown Victoria	$1,000
F series, Aerostar	$500
Ranger	$750
Aerostar (Northeast), Bronco, Econoline (RV pkg.)	$1,000
Mercury Topaz, Sable	$500
Capri, Tracer LTS, Cougar	$750
Grand Marquis	$1,000
Lincoln Town Car, Mark VII, Continental	$1,000

Pre-1992 models

1990-91 Ford Division models and 1991 Lincoln-Mercury models. Expires Feb. 4. In lieu of rebates, finance rates of 2.9 to 7.9 percent are offered. Finance rates differ by vehicle line and region.

Ford Tempo, Taurus	$400
Taurus SHO	$600
Escort, Mustang, Thunderbird	$750
Festiva, Probe	$1,000
Ranger, F series, Aerostar, Econoline (except E-150 RV)	$400
Aerostar (Northeast), Bronco, Econoline E-150 (RV pkg.)	$1,000
Mercury Topaz, Sable	$400
Tracer, Cougar	$750
Capri	$2,000

CONTINUING PROGRAMS

CHRYSLER CORP.

All programs expire Dec. 31. Finance rates in lieu of rebates start at 6.9 percent on minivans, 4.9 percent on other models.

In addition to the rebates on retail purchases listed here, Chrysler Corp. offers rebates under its Gold Key Plus Program. The rebates, which expire Dec. 31, are $250 to $2,000 on 1992 models and $150 to $1,975 on 1992 models.

1992 models

Chrysler Imperial, New Yorker Fifth Avenue	$1,000

Automobile gripes scorch NHTSA line

MAX GATES

Staff Reporter

WASHINGTON — The number of complaints by new car owners jumped 60 percent in the first year after a federal telephone hotline number was included in car owner's manuals, the National Highway Traffic Safety Administration has found.

Complaints registered on the NHTSA Auto Safety Hotline jumped from 1,065 in the 1990 model year to 1,661 in the 1991 model year, the first in which the owner's manual information was included. The complaint data was compiled at the request of Motor Voters, the Virginia-based consumer group that had originally requested the owner's manual information.

In a brief survey of callers earlier this year, NHTSA found that about 10 percent of the hotline calls were the result of the owner's manual information.

"We're very heartened by this," said Motor Voters President Rosemary Dunlap, who noted that the owner's manual requirement increased the likelihood that safety complaints would be registered with the government, with very little cost to carmakers.

NHTSA receives more than a 250,000 calls each year on its toll-free line (1-800-424-9393), including requests for information on recalls, new car crash results and a variety of safety, fuel economy and

Holidays start now at Big 3

ANNE E. WRIGHT

Chief Statistician

The Big 3 give an early Christmas holiday to workers at 10 U.S. plants this week as they continue to battle slow sales and high inventory levels.

General Motors has closed the following car plants for the remainder of December: Doraville, Ga.; Fairfax, Kan.; Van Nuys, Calif., and Willow Run, Mich. GM also closed these truck plants: Shreveport, La.; Pontiac, Mich. (East), and Detroit.

Ford Motor Co. will idle the Lorain, Ohio, truck facility until Jan. 6 due to poor sales. The company will also close the Lorain, Ohio, car facility next week due to poor sales, but the plant will stay down until Jan. 13 due to a facilities change.

Chrysler closed the Sterling Heights, Mich., facility until Jan. 20 due to poor sales. The plant builds the Dodge Shadow and the Plymouth Sundance.

In Canada, Chrysler's Bramalea, Ontario, plant completed production of the Dodge Monaco and the Eagle Premier last week. The four-year total production for the models was 143,055. The plant will be retooled for the new LH model, which is expected to begin production in spring.

GM scheduled Saturday overtime at six plants: Lansing, Mich. (M), car facility and the Moraine, Ohio, truck plant ran two shifts last Saturday. Both the Lordstown, Ohio, car and truck facilities and the Scarborough, Ontario, and the Osahawa, Ontario, truck plants worked one shift last Saturday.

Ford Motor Co. continues to run daily overtime at the Louisville, Ky., and the Kansas City, Mo., truck plants. The Kansas City plant was also scheduled to work one shift of Saturday overtime last week.

Chrysler scheduled two shifts of Saturday overtime at the St. Louis (No. 2) truck facility.

Last week's scheduled U.S. build of cars was up 3.3 percent over the prior week and 1.4 percent over the year-ago week.

Year-to-date, U.S. car production is behind 1990 by 12.4 percent.

The planned U.S. truck build last week was down 5.1 percent below the prior week and up 25.4 percent over the same week in 1990.

So far this year, truck production in the United States is 10.6 percent below 1990.

In Canada, car production last week was off 4.8 percent from the prior week and up 15.9 percent over the year-ago week.

For the year, car production in Canada is down 1.3 percent.

Estimated truck production in Canada last week was up 7.4 percent over the prior week and 14.7 percent over the same week in 1990.

Year-to-date, truckmakers in Canada assembled 1.6 percent fewer trucks than in 1990. ■

Stempel's GM: 80,000 fewer jobs

As Big 3 cut 12 jobs, Japanese create one

PHIL FRAME
Staff Reporter

JOE WILSSENS/AUTOMOTIVE NEWS

Chairman Robert Stempel said the cuts are designed to make GM profitable with a market share in the mid-30s.

The dramatic cuts announced by General Motors last week are just the continuation of the reduction of the domestic auto industry as it reluctantly accepts becoming smaller — and possibly leaner and more Japanese-like.

And the jobs are not being replaced by Japanese automakers in North America.

GM plans by 1995 to eliminate about 80,000 North American jobs.

But already in 1991, the Big 3 shed more than 40,000 jobs — nearly three-quarters as many as the Japanese automakers' total jobs in North America.

Japanese makers, who picked up 1.9 percentage points of market share as their sales dropped less than those of domestic makers this year, added 3,165 jobs in manufacturing, development, sales and all other operations in the United States and Canada.

The ratio is more than 12-1: For every 12 Big 3 jobs lost to the economy, the Japanese added one.

The ratio would have been less severe in 1990, when Japanese transplants added more jobs at their transplants. No direct relationship exists between Big 3 job losses and Japanese gains. GM Chairman Robert Stempel pointedly did not blame the Japanese for his huge restructuring announced last Wednesday.

As the U.S. companies pare down their operations to improve profitability and account for market share lost to Japanese competition, there are now about 55,256 jobs in the United States and Canada in the Japanese automakers' vehicle assembly, development, sales, port operations and all other functions.

Ford Motor Co. and Chrysler Corp. have been cutting their white-collar ranks at a faster rate than GM in recent years.

Stempel announced that GM will shut down six more vehicle assembly plants in the next four years, in addition to four plants that already were slated for closing.

GM also will close four powertrain and 11 component plants before 1996.

In human terms, the cuts mean the elimination of 80,000 North American jobs before 1996. GM's total employment in 1995 is expected to be about 350,000, down by half from 1985, Stempel said.

Porsche pricing: 968 below 944

RENO, Nev. — Porsche Cars North America has priced its new 968 coupe below the 944 model that it replaces. The 968 coupe with six-speed gearbox is $39,850, compared to $43,350 for last year's 944 S2. The 968 cabriolet is $51,000; the 944 ragtop was $50,350.

In the carryover 911 Carrera series (two-wheel drive and 4wd), prices are up $1,985 to $2,565. The 911s start at $63,900 for 1992. A new 911 America roadster is $87,000, and the 911 Turbo coupe is $98,875, up $3,875.

Give Porsche the distinction of pricing the first 1993 model. The 928-GTS coupe will be $80,920, up from $77,500 for 1991. The 1993 model is scheduled to go on sale next spring.

Madza names new president

TOKYO — Mazda Motor Corp. President Norimasa Furuta has been replaced as the company's top operating officer by Executive Vice President Yoshihiro Wada, a former banker who joined the company just eight years ago.

The corporation's board of directors late last week moved Wada into the president's post

New technology will improve 626's mpg.

Mazda goal: 27.5 mpg

New components slated for U.S. '93s

LINDSAY CHAPPELL
Staff Reporter

Mazda will try to squeeze out an average of 27.5 mpg for 1993 models built in Michigan by changing some drivetrain components and taking weight out of other components.

Mazda said added technology also will help the cars achieve the required corporate average fuel economy of 27.5 mpg for a domestic fleet.

The 626 sedan and MX-6 coupe, both built in Flat Rock, Mich., will become the first Japanese-brand, Japanese-built cars to become a domestic fleet next year when their North American content level passes 75 percent.

Neither car currently meets the standard required by the EPA — 1992 mileage ranges from 21 to 27 mpg — but Mazda is confident they will. If not, the carmaker could face millions of dollars in federal fines.

"We fully expect to meet or exceed the 27.5-mpg requirement," said Tom McDonald, a spokesman for Mazda Motor of America Inc. "Mazda certainly doesn't intend to put itself in the position of not meeting it."

Until now, the cars have been part of Mazda's import fleet and have been averaged with other cars having higher fuel-economy.

Mazda has been pushing for lighter componentry in recent years, and McDonald said the new cars will probably weigh less than current models, which contributes to better mileage. He said the models will have a wide range of new technological features and new drivetrain components that will increase mileage.

McDonald also noted that EPA certification does not depend on the fuel-economy figures published by the agency, but on a separate set of tests.

"The numbers you see on the car's window sticker, or in the EPA guidebook, are somewhat misleading. That's not what the EPA goes by," he said. "The actual testing can result in a figure that's five points higher than those figures."

The fleet average mileage for the Flat Rock-built cars will depend on how many of each is sold, so it cannot be determined until the end of the model year.

Japanese prepare 'gifts' for Bush

MAX GATES
Staff Reporter

Makers boost import goals ➤ 28

WASHINGTON — President Bush will get a boost to his political fortunes as he tries to improve U.S. trade prospects during his upcoming 12-day trip to the Far East.

Japanese leaders say openly that they would like to see Bush reelected next year and that they will not send him home empty-handed.

They are likely to agree to increase purchases of U.S.-made products, including autos and auto parts, when Bush and his contingent of business leaders visit Japan Jan. 7-10 on the final leg of the president's four-stop trip.

"This will be a gift for Mr. Bush, something he can take back," said an executive of one Japanese automaker.

Japanese automakers set the stage last week with a new round of overseas spending targets, and further announcements are expected to coincide with the visit to Tokyo and Kyoto.

Japan's interest in Bush's reelection stems from the president's opposition to tariffs or quotas on Japanese products entering the United States, despite growing complaints about the $40 billion U.S. trade deficit with Japan.

"Bush's stance is not to be protectionist," said an official of another Japanese automaker, who asked not to be named.

Bush's re-election "would be positive for Japanese industry," he said.

In contrast, Democrats in Congress and conservatives backing Republican presidential challenger Pat Buchanan have been arguing

Chevy, Ford fight fiercely to win pickup sales race

ARLENA SAWYERS
Staff Reporter

The winners of the "best-selling-vehicle" race for the 1991 calendar-year could very well be the buyers of full-sized pickup trucks. They are being bombarded with year-end incentives from Ford Division and Chevrolet.

Through Dec. 10, defending champion Ford's F-series pickups led by 12,247. For calendar 1990, the F-series trucks won by 34,526 units.

Ford is offering consumers combined incentives of as much as $1,500 on 1991 and 1992 F-series pickups. By matching a Ford program in addition to its regular incentives, Chevrolet is offering as much as $2,500 in combined consumer and dealer rebates on 1991 and 1992 C/K pickups.

and named Furuta vice chairman. Former President Keniichi Yamamoto remains chairman of Mazda.

Furuta, 63, had served as president since December 1987.

Wada, 60, joined Mazda in 1983, and since August 1988 he has been executive vice president and general manager in charge of corporate planning operations.

Wada's background is in finance. He joined Mazda after a 28-year career at Sumitomo Bank Ltd., where his last job was general manager of the head office. The bank and related companies own about 10 percent of Mazda.

— Richard Johnson

Ford recalls vans, Town Car

DEARBORN, Mich. — Ford Motor Co. is recalling approximately 380,000 1989 model F-Series light trucks and 1989 to 1991 model Econolines and Club Wagons equipped with gasoline engines and dual fuel tanks. Diesel-powered vehicles are not affected.

It is possible that the fuel tank selector valve, designed to control the fuel flow between the tanks and the engine, may malfunction. Should the valve fail, there is the potential for over-filling one of the tanks, which would cause fuel to leak out the inlet pipe past the filler cap.

In a separate action, Ford is recalling 80,000 1991 Lincoln Town Cars to replace the hood latch assemblies. In some cases, the auxiliary hood latch may not fully engage.

If the primary hood latch does not engage, such as when the hood is not tightly closed, the auxiliary latch may not hold the hood in place. Such a failure would cause the hood to open while the vehicle is being driven.

Most makers trim incentives

WEST CHESTER, Pa. — Five of the six largest vehicle manufacturers reduced their incentives from year-ago levels, according to a report released last week.

Autofacts Inc., an information and planning center which tracks incentives, said only Chrysler Corp. substantially increased average cash incentives by adding a variety of regional incentives.

For October/November 1991, Chrysler incentives averaged $3,744 or 71 percent higher than the same period in 1990. Industrywide, the average incentive during that same period was $1,625, a 7 percent decline from last year.

General Motors, Ford Motor Co., Toyota Motors Sales U.S.A. Inc., American Honda Motor Co. Inc. and Nissan Motor Corp. in U.S.A. reduced their October/November 1991 incentives from year-ago levels.

UAW, GM buy child care spot

FLINT, Mich. — General Motors and the UAW last week purchased three acres of land and a 16,000-square-foot building in Flint for a joint pilot child care center.

The center, scheduled to open in April, is for children of GM's 40,000 UAW workers in the Flint area who work at 13 GM facilities.

Ford appoints three to NAAO

DEARBORN, Mich. — Ford's North American Automotive Operations appointed three senior officials, effective Jan. 1.

Max Jurosek was named to the newly created position of senior vice president. He will report to Alex Trotman, executive vice president of the group, and will oversee the review and analysis of investment efficiency initiatives for future product and manufacturing programs.

Robert Transou was appointed general manager of Powertrain Operations, succeeding Jurosek. He reports to Trotman and will oversee Engine Operations, Transmission and Chassis Operations, Casting Operations, and powertrain engineering.

Robert Adams was appointed to the new position of director of engineering and manufacturing for Powertrain Operations. He will report to Transou.

NADA sees '92 at 13.5 million

WASHINGTON — Sales of new cars and light trucks will soar to 13.5 million units in 1992, compared with 12.5 million in 1991, according to the National Automobile Dealers Association.

"Lack of consumer confidence is not the main culprit behind weak sales," said Tom Webb, NADA's chief economist. "It is due to lack of money. Consumers are trying to rebuild their savings."

NADA's forecast is in line with those of industry analysts, who say sales could be as high as 14.3 million units in 1992. General Motors forecasts a slight recovery with car and light-truck sales at 13.5 million to 14 million. Chrysler Corp.'s estimate is 13.5 million.

Dealers should expect looser credit, more leasing and fewer customers with a negative equity position in their car loans, says Webb.

— Charles M. Thomas

Jaguar XJ220 at Detroit show

MAHWAH, N.J. — Jaguar Cars Inc. will showcase its 200 mph supercar at the North American International Auto Show in Detroit, Jan. 11-19.

The XJ220 topped 212 mph in speed trials at the Fort Stockton proving grounds in Texas earlier this year, Jaguar said. The car will not be sold in the United States.

briefly

Mercedes ad pitch backfires

New York ad agency Slater Hanft Martin recently took out two ads in *The New York Times* courting Mercedes-Benz. The idea was to wrangle an invitation to compete for the carmaker's $90 million account now in review. The first ad was in Japanese and bore the Mercedes-Benz logo. The second ad, also with the logo, had the English translation: "In today's car market you don't have the luxury of working with anyone else." The English ad gave the agency's name and phone number. The agency got an immediate response — a letter from Mercedes' lawyer warning the agency that it was infringing on the Mercedes logo and to cut it out.

STAY PLUGGED IN — The official pace car for the 103rd Tournament of Roses parade will be a **Chrysler** prototype electric minivan. The Chrysler TEvan will lead floats and bands through the streets of Pasadena, Calif., on Jan. 1. The van, which Chrysler expects to produce by the mid-1990s, is powered by a nickel-iron battery. The advanced-technology van reflects the parade's "Voyages of Discovery" theme, parade organizers said.

BAN ON ANTIPERSPIRANTS — It's no *secret* anymore. There is a *ban* on certain antiperspirants at **Chrysler Corp.'s** Jeep plant in Toledo, Ohio. Flakes from antiperspirants containing aluminum zerconium can filter out of workers' garments and float onto the surface of vehicles as they are prepared for painting. The paint will not stick to the flakes, which form tiny depressions in the paint and cause thousands of dollars in damage to the vehicles. Certain hairsprays and eyedrops are also culprits in paint problems which affect all U.S. vehicle assembly plants, a Chrysler spokesman said. He said antiperspirants and deodorants that do not contain chemicals responsible for damage can be used by workers in the paint shop. Everyone is *sure* glad about that.

LOST VACATION — President Bush and leaders of the Big 3 waited until after their holidays to visit Japan, but they'll tromp all over the Japanese year-end holiday. The entourage arrives Jan. 6, the first day back to work after the New Year's break when Japanese families get together. To prepare for the visit, public relations people and other white collar workers expect to work through the holidays. George, if you're sorry, say, *gomen nasai*.

CALIFORNIA HERE I COME (I HOPE) — Former Hyundai executive Art Meissner says he's ready to trade Colorado for California — and retailing for wholesaling. After his stint as head of **Hyundai Motor America** in Fountain Valley, Calif., Meissner moved to Colorado, where he sold cars until selling his dealerships to Denver Bronco quarterback John Elway earlier this year. Now, Meissner is talking to **Kia Motors Corp.** about being its top-ranking American executive, which would be his ticket back to California — and to running an import company. "If you're a skier, this place is great," Meissner said. "But if you want opportunity with an import company, Southern California is the place to be."

Meissner: It's the place to be

Chrysler cut its costs and looks leaner

MARY CONNELLY
Staff Reporter

Even as General Motors braces for years of retrenchment, Chrysler Corp. has already begun reaping the benefits of two years of painful cost cuts and white-collar reductions.

GM is starting down the path that Chrysler began treading in 1989 in pursuit of a "lean" organization.

In the past year, Chrysler has been the target of much negative media coverage of its performance and prospects. Now, as the glare of the national media spotlight turns to GM, Chrysler can point to gains made through fundamental changes in the organization.

While GM hopes to wring out $5 billion in annual costs by 1995, Chrysler says it has already has squeezed $3 billion in annualized costs from its operations in just over two years. In 1991 alone, 3,000 salaried jobs will have been trimmed — a 10 percent decline, compared to a 5 percent cut in 1991 at GM.

Chrysler's salaried and hourly automotive work force will total at 113,500 employees when the year closes, down from a peak of 135,200 workers in October 1987, following Chrysler's purchase of American Motors.

And there is no end in sight to the reductions.

Chrysler will scrape out an additional $500 million in cost savings and eliminate more white-collar jobs in 1992. And the company expects to trim an additional $300 million to $500 million annually for years to come.

"We are very much in pursuit of the lean system," said Chrysler President Robert Lutz. "We still have in our total cost structure billions of dollars of as-yet-unidentified waste, and it's just a matter of finding it.

In July 1989, Chrysler began a $1 billion cost-reduction campaign that grew to $3 billion in 1991. The company said it achieved the $3 billion in annualized reductions in the third quarter of this year.

"At the end of every year, we are going to have fewer salaried heads than we had the year before, and it's never going to stop," Lutz said.

By the end of December, Chrysler will have 27,000 salaried automotive employees in North America, including 1,800 temporary contract employees. At the end of 1990, the salaried automotive head count was 30,000, including 2,800 contract employees.

The work force reduction was achieved through attrition, special early-retirement programs, voluntary termination incentive programs and a "relatively small" number of layoffs, said Anthony St. John, Chrysler vice president of employee relations.

Chrysler hopes to avoid layoffs as it eliminates more jobs.

Chrysler's automotive hourly work force in North America rose slightly in 1991: 86,500 at the end of October 1991, up from 85,350 at the end of 1990.

The company is not yet perfectly lean. According to an *Automotive News* calculation of plant utilization based on straight-time, two-shift capacity, Chrysler produced at just 67.8 percent of the capacity of its 10 assembly plants for the 1991 model year — higher than GM's percentage, but lower than that of Ford Motor Co.

One measure of Chrysler's success was noted by Wall Street auto analysts when the company reported third-quarter earnings.

Chrysler surprised analysts by posting a lower-than-anticipated loss of $82 million for the quarter — a pittance compared to GM's loss of $1.06 billion and Ford Motor Co.'s loss of $574.4 million.

In a year-end statement issued last Thursday, Chairman Lee Iacocca said: "We kept our costs down while protecting our investment in the future.

"Losing less money than our competitors is no honor, but it does say that Chrysler is in shape for recovery."

Chrysler began streamlining after the AMC purchase in August 1987, which swelled its hourly and salaried employment to a peak of 135,200 workers in October of that year.

Then in mid-1989, Iacocca began warning that a recession was in the offing and the company had to be trimmed.

Chrysler's new shape and size in the decade ahead will be determined by a system called "process redesign." Essentially, process redesign takes a single task, breaks it down into steps and identifies steps that can be eliminated.

Ford has already cut

KATHY JACKSON
Staff Reporter

Ford Motor Co. President Philip Benton says he doesn't anticipate massive programs next year to cut employment at Ford. He says Ford achieved most of its necessary cuts this year.

Ford's U.S. and Canada salaried work force, excluding the financial group, dropped to about 44,793 this year, down 5.5 percent from last year. All but about 300 of the cuts were through attrition or special early buyouts.

Benton said any cuts in 1992 will be "significantly more modest. Where we need reductions, we hope to meet them through attrition."

Ford's fund of $1.6 billion to pay laid-off UAW workers 95 percent of their regular earnings throughout the current contract, which ends in 1993, is in no danger of running out, he said. He said Ford probably won't ask the UAW to reopen the contract.

Ford has 108,550 U.S. and Canadian hourly automotiveworkers, down 3.3 percent from 1990, said company spokesman Dick Routh.

The impending cutbacks at General Motors are old hat at Ford, which slashed jobs and capacity in 1979-82. From the end of 1978 to the end of 1990, Ford shrunk from a U.S. work force of 197,405 hourly and 74,469 salaried workers, a total of 271,874.

Routh said productivity has risen along with the cutbacks. In 1980, Ford produced about 13 vehicles annually per North American employee. By 1990, that had risen to 21 vehicles annually per employee.

Ford is utilizing 80 percent of its North American plant capacity now and expects that to increase to 90 percent in the first quarter of 1992, Benton said.

Staff Reporter Joseph Bohn contributed to this report.

Automaker employment, '91 vs. '90

U.S. and Canadian employment by the Big 3 and the Japanese breaks down this way:

FORD
- Salaried automotive work force: down 5.5 percent to 44,793
- Hourly automotive work force: down 2.5 percent to 108,550

CHRYSLER
- Salaried: down 10 percent to 27,000
- Hourly: up 1.3 percent to 86,500

GENERAL MOTORS
- Salaried automotive: down 5 percent to 91,000
- Hourly automotive: down 7.4 percent to 338,000

BIG 3 COMBINED
- Salaried: down 10,600
- Hourly: down 29,600

JAPAN
- Total OEM transplant, r&d, sales company, port and subsidiary employment in U.S. and Canada: 55,256, up 6 percent from 52,091 in 1990.

Transplant payrolls grow

LINDSAY CHAPPELL
Staff Reporter

Suppliers also on diet > 26

As General Motors shrinks its U.S. operations, another auto industry group is growing on American soil.

Japanese transplant car manufacturers and sales companies now employ about 45,000 people in the United States, and another 6,000 in Canada — up almost 10,000 jobs in two years, according to an *Automotive News* compilation of employment figures given by the nine Japanese automakers operating in the United States.

But that doesn't come close to making up for the jobs axed by the U.S. Big 3. This year alone, the Big 3 dropped more than 11,000 salaried jobs. GM alone has cut 25,000 U.S. hourly jobs in 1991.

Thousands of employees at U.S. companies now owe their livelihood to supplying Japanese car plants. According to a formula used by the U.S. General Accounting Office, as many as 90,000 jobs at U.S. and Japanese-transplant parts companies support the Japanese plants. The expanding Japanese-owned parts makers alone account for about 60,000 jobs.

Of the 45,000 jobs at Japanese automakers and sales companies, about 30,000 are at transplant assembly factories and U.S.-Japan joint ventures. The other 15,000 jobs cover white collar workers, including about 3,000 people at Japanese companies' U.S. research and development operations.

Both blue and white collar employment by Japanese-owned firms will continue to grow. Transplant carmakers plan to open or expand four more factories in the next two to three years, meaning another 6,000 assembly jobs alone.

One importer released a comment on the GM cuts immediately after last week's announcement.

Robert McCurry, the outspoken executive vice president of Toyota Motor Sales U.S.A. Inc., said, "GM management had to do what it believed to be best for the company. We empathize with them, and hope they will be successful."

Dealers OK cuts, but blame Japan

LIZ PINTO
Staff Reporter

General Motors dealers voiced tentative support of GM Chairman Robert Stempel's plans to trim the company to achieve profitability.

In telephone interviews, dealers agreed with Stempel's "lean capacity approach" and empathized with employees who could face layoffs.

Many dealers blamed imports for much of GM's dilemma.

- **Philip Buxbaum,** owner of Hayes Chevrolet-Buick in New Milford, Conn.: "GM was definitely at too much capacity, so in that respect what they are doing with plants makes a lot of sense. But we have to stop the Japanese. The government needs to put quotas on Japanese imports."
- **Bill Lehman,** owner of William Lehman Buick in Miami, Fla.: "I guess if I was losing a half-billion dollars a month I would be taking drastic action, too. But I also think the American government has to work closer with the three domestic manufacturers so that they can return to stability, much less profitability."
- **Rick Parker,** part-owner of Parker Cadillac, Little Rock, Ark.: "What Stempel is doing probably needed to be done because of the economic climate. But I would like to see the government come out with a 10 percent rebate for anything American made for 90 days."
- **Tom Sheehan,** owner of Sheehan Pontiac-GMC Trucks in Lighthouse Pt., Fla.: "Stempel's announcement came on a sad day because it is indicative of the state of manufacturing in this country and sad because of the employees and their families that will be negatively affected.

"But from a strict business standpoint, I look forward to the consequences of the decision. It will make for a healthier GM."

trucks

in brief

TRUCKS

LTV agrees to sell AM General

DALLAS — LTV Corp. agreed to sell its military truck manufacturing unit, AM General Corp., to The Renco Group Inc., a privately owned, New York-based holding company.

Terms of the sales agreement were not disclosed.

The sale, which is subject to approval by the U.S. Bankruptcy Court, is part of LTV's plans to sell all of its LTV Aerospace and Defense Co. In 1986, LTV filed for Chapter 11 protection under the U.S. bankruptcy code.

A court hearing on the sale is scheduled for Dec. 23.

LTV acquired AM General from American Motors in 1983. AM General in South Bend, Ind., will begin delivering a civilian version of its military Hummer vehicle in 1992.

Navistar adds ABS, cuts engine lineup

CHICAGO — Navistar International Corp. will begin making anti-lock brakes a production option on its International 9000 series cabover and conventional tractors beginning in January.

ABS also will be available on International 8000 series conventionals by July 1992, according to Wayne J. Krzysiak, Navistar vice president of sales.

Navistar picked Allied-Signal Automotive's Bendix Heavy Vehicle Systems Group as its ABS supplier.

The Bendix full vehicle wheel control system has four speed inputs, including two from the rear drive axle and two from the front steering axle.

Navistar's new 360 and 466 engines, due out in January, will get a new DTA designation to signify they are air-to-air intercooled and turbocharged. The only exception is the DT-466 used in forward-control, transit-style school bus chassis. The engine is turbocharged without intercooling.

Navistar also will consolidate its engine line by dropping the 7.3-liter diesel at 130 horsepower, the DTA-466 at 220 hp and the DTA-466 at 250 hp with 700 pounds-feet of torque.

Bathke is first Ford sales grad

LOUISVILLE, Ky. — Karl Bathke, a salesman with Salinas Valley Ford Sales in Salinas, Calif., is the first graduate of Ford's Heavy Truck University.

Bathke was the first of over 1,200 Ford Heavy Truck salespersons to enroll in the University for Master Associates certification. Attainment of that level requires completion of 15 comprehensive courses.

Ford launched the university in 1988 to train retail salespersons and management for heavy-truck dealerships. Three levels of certification or an alternative concentration of training in medium-duty, vocational, or over-the-road models are offered.

Class 8 sales expected to dip 20.7%

Year's tally may be lowest since 1983

JOSEPH BOHN
Truck Editor

Truck industry officials expect Class 8 U.S. retail truck sales to come in at slightly over 96,000 units for calendar 1991, which would be the lowest level since 1983.

The level also would represent a 20.7 percent decline from 1990, according to the Motor Vehicle Manufacturers Association.

The industry sold 88,438 Class 8 models during the first 11 months, off 20.2 percent from the year-ago period, according to MVMA.

The industry is looking for at least a modest upturn next year.

Volvo GM Heavy Truck Corp., for example, is looking for a 7 to 8 percent increase in calendar 1992 Class 8 sales to about 105,000, according to Dave Wilson, Volvo GM manager of market research and planning.

Freightliner Corp., which has been fairly conservative in its past forecasts, is looking for 110,000 U.S. Class 8 sales in 1992, according to Debi Nicholson, Freightliner director of public affairs.

Frank Prezelski, an analyst with Rothschild Inc. in New York, also expects at least 110,000 to 115,000 sales for Class 8 models next year.

On average, truck demand is still moving up ever so slowly, Prezelski said.

Volvo GM sees a slow recovery in 1992 that will come mostly in the second half.

"The economy has got to get back on its feet again. That's the key," Wilson said.

"Until consumer spending and industrial production start heading in the right direction, there will be no freight to haul," Wilson added.

Volvo GM, like other major manufacturers, is anticipating fiscal stimulus from the federal government and lower interest rates to improve consumer confidence.

The new Surface Transportation Efficiency Act of 1991, which authorizes spending of up to $119 billion on roads and highway repairs over the next six years, will particularly benefit manufacturers like Mack Trucks Inc., Ford Motor Co. and Volvo GM, which have strong sales in construction trucks.

Direct construction-related vehicles, such as dump trucks and mixers, account for about 12 to 15 percent of the market.

Even with a rebound, though, heavy-truck manufacturers need 125,000 to 130,000 sales to get back to strong profitability, Prezelski said.

One bright spot is that industry officials are predicting the recovery will last longer than previously anticipated.

Engine manufacturers had been cautioning that they would need costly, complex devices to meet stringent new diesel pollution standards mandated by the federal government for the 1994 model year.

Now, the manufacturers are saying they can meet those standards without such equipment, Wilson said.

Prezelski, confirming the report, said this will be a major benefit to manufacturers.

"It means they won't have to crank up factories to run at maximum speeds in 1993 only to have the plug pulled on them in '94," he said.

"It provides for a smoother production ramp up and transition from one year to the next."

Sales race in Class 8 trucks headed for a photo finish

Freightliner poised to upset Navistar

JOSEPH BOHN
Truck Editor

Navistar International Corp., Class 8's reigning sales champion over the past 25 years, was dethroned in November and may relinquish its position to Freightliner Corp.

The race for the calendar year sales crown may end in a photo finish with the UAW possibly determining the winner.

Last month, Freightliner moved firmly into the No. 1 spot in Class 8 sales for the first time in its history. According to the Motor Vehicle Manufacturers Association, it outsold or tied Navistar in six of 11 months this year and grabbed the year-to-date lead at the end of November with calendar year sales of 20,619 units, compared with 20,140 for Navistar.

Navistar, formerly International Harvester, has been the heavy-truck sales leader for a quarter century. White Motors Corp. was the last company to hold the title, back in 1966, before Navistar took over, according to MVMA data.

With Freightliner's momentum, it seemed to be a shoo-in for the top spot in calendar 1991. But the company got hit with a UAW strike Dec. 4 at its Mt. Holly, N.C., plant. The plant normally builds 55 trucks a day; the strike cut output to 25 a day, though Freightliner officials were hopeful of getting up to 30 a day last week, said Debi Nicholson, Freightliner director of public affairs.

Workers at Mt. Holly voted for the UAW to represent them in April 1990 but they have been unable to reach a contract agreement.

No other Freightliner plants are affected.

Freightliner still has a shot, though slim, at upending Navistar for the calendar year. The race will be close but, as the history of vehicle sales reporting has shown, strange things can happen on the last day of the month.

Before the strike, the heavy-truck industry was expected to sell about 95,000 units for calendar 1991. Now it is expected to produce slightly over 96,000 units, said Frank Prezelski, an analyst with Rothschild Inc. in New York.

He anticipates Navistar pulling out all the stops to retain its No. 1 position. Navistar has ample inventory to fight Freightliner.

Earlier this month, Navistar reported a $165 million loss for fiscal 1991. A loss of sales leadership would be doubly troubling.

But it is questionable whether Freightliner can attain long-term sales leadership. The current market gives a disproportionate share of the sales mix to on-highway tractors at the expense of straight trucks, such as those used in construction, an official with Volvo GM Heavy Truck Corp. said.

Thus, the market currently favors West Coast-based Kenworth Truck Co., Peterbilt Motors Co. and Freightliner more than Ford Motor Co., Mack Trucks Inc. and Navistar. But when the economy improves, Navistar is likely to rebound more quickly.

Mazda sets course for 250-horsepower version of Miata

$60,000 image car has V-6 from 929

RICHARD JOHNSON
Staff Reporter

TOKYO — Mazda Motor Corp. is planning its own "Cobra," a rebodied 250-horsepower version of the MX-5 Miata that is likely headed for production as a limited-edition model. Some could reach the United States.

Dubbed M2 1006, the forthcoming car is under development at company's new M2 Inc. experimental product planning center in Tokyo.

At more than $60,000 a pop, the M2 1006 would be Mazda's ultimate image car and an answer of sorts to the Acura NSX.

The running prototype has dramatically flared front and back wings which give it a much wider and more aggressive stance than the Miata.

Power comes from the 929's 3.0-liter V-6 and road characteristics are courtesy of the new RX-7's chassis.

The M2 1006 has been in the works for the past year at Mazda's Yokohama development center, and it is now being supervised at the M2 headquarters, where the rough-hewn prototype is housed in the basement of the recently opened four-story structure.

Company officials said that if they decide to go ahead with the project, the car could be in production in two to three years. Other sources say the M2 1006 may appear as early as next year as an auto show attraction.

Within M2, the M2 1006 prototype is referred to as the "Eunos Cobra" because of its resemblance to the Ford V-8 powered sports car classic of the 1960s.

Eunos is an upscale Mazda sales channel in Japan that markets the Miata as the Eunos Roadster.

Much as the Miata is a modern incarnation of classic British two-seater sports cars of the 1960s, the M2 1006 is viewed here as a modern rendition of Carroll Shelby's original Cobra.

A limited production run of 500 is being discussed.

Distribution plans are not finalized, though besides the Japanese domestic market, Mazda is eyeing sales in the United States and Germany.

Pricing is not settled, but officials are planning on the basis of an 8 million yen ($62,500) sticker.

Mazda will likely use an Alpha-numberic badge, probably the M2 1006 moniker it now carries as a prototype.

The prototype's engine bay is packed tight with the twin-cam 24-valve 3.0-liter V-6. The current output is about 210 hp, but engineers are aiming at production-car performance of 240 to 250 hp. That compares the 120-hp output of the current 1.6-liter, four-cylinder Miata.

The M2 1006 chassis is borrowed from the RX-7, with double-wishbone suspension and ventilated disc brakes.

The Miata's bespoilered body is stiffened and a rollbar added.

The prototype is fitted with 16-inch Pirelli tires and rigid sport seats.

The length of the M2 1006 is identical to the Miata, but the wheelbase has been extended slightly.

Styling was done by a small, outside consultant, which Mazda officials are keeping secret.

Product development officials said the current shape of the M2 1006 is essentially frozen, though details of the front window are still being refined. AN

Japan gets pumped-up Miata

TOKYO — Mazda Motor Corp. has launched a souped-up, limited edition of the Miata/Eunos roadster to mark the opening of a new research and vehicle development subsidiary in Tokyo.

The center, M2 Inc., is based in a new four-story structure housing a small-scale experimental studio where M2 staff will concentrate on "soft" aspects of product development.

The non-traditional unit will study consumer tastes in metropolitan Tokyo and plug the findings into the corporation's mainstream product development. M2 is concentrating on image-enhancing, high-performance niche models with its youngish staff of 25 designers, engineers and product planners.

To mark the start-up of the unit, Mazda launched the M2 1001, a special-edition of the Miata/Eunos that will sell for nearly twice the price of a stock version. The vehicle will be sold only in Japan.

The Miata's 1.6-liter engine has been overhauled to accommodate modified pistons, camshaft, flywheel and exhaust manifold. Output has been increased from 120 horsepower to 130 at 6,500 rpm and higher maximum torque.

Although sheet metal remains the same, the M2 1001 gets a front spoiler with integrated fog lamps, a rear spoiler, aerodynamic aluminum door mirrors and new interior details.

Other features include a rigid rollbar and specially tuned chassis and suspension. Interior modifications are aimed at improving functionality.

Mazda says only 300 M2 1001 units will be produced, and all will be the same dark blue-black color. The car will sell for 3.4 million yen ($26,500) and would-be buyers must place orders in person at the M2 headquarters.

Europe expects record '91 sales despite Nov. dip

DIANA T. KURYLKO
Staff Reporter

FRANKFURT — Weighed down by a 19 percent skid in the German market, European new-car sales slid 7.7 percent last month to an estimated 974,000 units. Sales for the 11 months through November were virtually unchanged from a year earlier, at 12.7 million units.

But analysts say they still expect sales in the 17 countries to hit a record 13.5 million units this year, up 1.7 percent over last year, on the basis of record first-half demand in Germany.

Despite the November slide, German sales for the 11 months were still 30 percent ahead of a year earlier, at 3.95 million units. Analysts expect the country to post record sales of at least 4.1 million units for the year, and then retrench to about 3.5 million in 1992.

"The German market is weakening; November reflects a sharp drop in demand," said Arthur Maher, an analyst with DRI/Europe in London. "But in 1992, the European picture will be quite different. The United Kingdom and France will enjoy growth, and Italy will be stable."

Italy, Europe's second largest market, rose 17.7 percent in November, but was down 1.4 percent for the 11 months. Year-to-date sales dipped to 2.18 million units from 2.2 million last year.

Maher said Italy appears to be "exceedingly strong."

"We saw with the outbreak of the Gulf War that France and other markets went weak," he said. "But the Italian market was not affected adversely."

Sales in France fell 14 percent in November and were off 13.1 percent for the 11 months, dropping to 1.87 million units from 2.1 million a year earlier.

Sales there were expected to be off last month because of a 21-day strike at Renault, but Maher said the French market has remained slow since the first quarter, and likely will end the year at 2.09 million cars.

DRI forecasts sales in France will rise to 2.18 million units in 1992, contingent on overall improvement in the European economy.

The United Kingdom is in a similar slump, with November sales down 14.4 percent and 11-month figures off 21.2 percent from a year earlier, at 1.53 million units.

"In 1992, we continue to expect a recovery to 1.79 million units" in Britain, Maher said.

Sales in Spain were up 5.6 percent for the month of November but down 10.7 percent for the 11 months, to 819,200 units. Analysts are uncertain how Spain will end the year because the government is considering reducing the 33 percent value-added tax on cars, and consumers could delay purchases for a rollback.

Because of limited supplies of its new subcompacts, Volkswagen AG sales were down 5.4 percent in November from a year earlier.

General Motors Europe was off 16.5 percent for the month compared to November 1990.

Ford of Europe was off 5.4 percent for the month, reflecting the continuing recession in its home market in Britain.

Renault SA, affected by strike-related shutdowns and the ailing French economy, was down 17.6 percent in November from the year-ago period.

The Fiat Group showed a 3.4 percent increase for the November period, and sales for the Peugeot Group were up 1.3 percent.

For the 11-month period, Volkswagen Group, with 11-month sales of 2.03 million units, continued as the unchallenged European sales leader with a 16 percent market share.

Fiat Auto, with a 12.6 percent share, was down 9.3 percent for the 11 months, to 1.6 million cars.

General Motors and Ford remained neck-in-neck for the 11 month period, with Ford commanding a 12 percent share on sales of 1.52 million units and GM following with a 11.8 percent share on sales of 1.5 million units.

Ford was up 4.4 percent for the 11 months, while GM showed a 1.2 percent gain. AN

Toyota lowers profit forecast

RICHARD JOHNSON
Staff Reporter

TOKYO — Toyota Motor Corp., stung by the worldwide auto slump, a rising yen and increasing depreciation, investment and labor costs, has revised its earnings forecast sharply downward.

At a press conference, President Shoichiro Toyoda forecast a slight recovery for the slumping Japanese domestic market in 1992, predicting a rise in new-car registrations, excluding mini-vehicles, of 1.7 percent, to 5.9 million units.

Toyoda also called for an end to Japan's self-imposed restrictions on car exports to the United States. He said he remains opposed to the voluntary restraints "in light of the free trade principle." Japanese car exports to the United States have been restricted since 1981. The current ceiling is 2.3 million cars.

The biggest Japanese automaker said it expects its parent company's pretax profits to decline to 400 billion yen (about $3.1 billion) during the fiscal year which ends June 30, 1992. Earlier, Toyota had forecast earnings of $4.3 billion for the fiscal year. Pretax profits were $4.5 billion in fiscal 1991 and $5.7 billion in fiscal 1990.

Net sales of $70.3 billion are expected for the fiscal year, up from $67.2 billion.

Toyota has also rolled back its initial capital investment plan of $3.9 billion for the next fiscal year, although it did not specify the new level. The company is spending $4.5 billion during the current fiscal year.

The company forecast 1992 calendar-year domestic production of 4.08 million cars — about the same level as 1991 — and said that overseas output will rise 22 percent to 820,000 next year. Toyota said car exports will decline 3 percent to 1.65 million units and predicted Japanese domestic sales of 2,460,000 during 1992, up 3 percent from this year.

Toyoda also revealed plans for a new corporate philosophy aimed at reflecting the company's environmental consciousness, but did not provide details. AN

*Estimated †Breakdown of North American built and imported car sales not available.

There were 9 selling days in the period this year and 8 last year.

Early-December sales tumble 10.2 percent

ANNE E. WRIGHT
Chief Statistician

The economy remains sluggish and consumers continue to show caution as the holidays approach. Car and light-truck sales fell in the first 10 days of December, making it nearly impossible that December sales will rise above the year-ago total.

Overall sales of domestic and imported cars and light-trucks for the period fell 10.2 percent, to 244,593. Cars were off 12.2 percent and trucks 6.6 percent.

Domestic-car sales slid 13.6 percent, and imports were off 7.1 percent. Truck sales mimicked that pattern — domestics were down 7.6 percent and imports off 1.0 percent.

Sales were off for each of the Big 3. General Motors declined 6.1 percent; Chrysler Corp. dipped 12.0 percent, and Ford Motor Co. fell 23.4 percent. Chrysler's sales are estimated by *Automotive News*.

Despite GM's overall sales decline, three divisions posted gains. Cadillac was up 10.4 percent; GMC climbed 4.7 percent, and Buick was up 4.4 percent. Buick remains the only Big 3 car to post an overall gain for the 1991 calendar year.

Toyota Motor Sales U.S.A. Inc. reported an increase over the 1990 period as sales of domestically built cars gained 5.0 percent and trucks went up 31.8 percent.

American Honda Motor Co. Inc. gained 39.8 percent in the first 10 days of December. The Honda Division, which suffered a poor November, enjoyed a sales increase of 53.9 percent for Dec.1-10, while Acura slipped 0.8 percent. ■

Suppliers join automakers in slimming operations

Worker, spending cutbacks planned

LINDSAY CHAPPELL
Staff Reporter

Like their automaking customers, several large, international automotive suppliers are scaling down as the worst year in auto manufacturing since 1983 ends.

TRW Inc., Allied-Signal Inc. and Tenneco Inc. have announced they will cut 21,000 workers as they restructure, sell off units and reduce capital spending.

Earlier in the year, Goodyear Tire & Rubber Co., Michelin Corp. and other major suppliers implemented restructuring programs.

Some of this month's moves began with non-automotive operations.

TRW's restructuring plan was prompted by setbacks in its defense and credit and information businesses, and Tenneco's moves were made partially in response to longstanding problems in its farm equipment operation.

But the shakeups among the key parts makers reveal how deeply the auto market is being affected by economic conditions.

Industry analysts believe other companies closely linked to the automotive market may face similar pressures.

■ TRW will lay off 10,000 of its 72,000 workers and divest itself of business units that account for $890 million in annual sales.

The company has not said yet which of its automotive operations will be closed or reduced. But TRW did say that increasing sales volume for air bags worldwide will help boost earnings next year — even if vehicle sales do not improve.

> “There is a squeeze on suppliers. They're being asked by the automakers to do two conflicting things at one time.”
>
> **BERNARD CAMPBELL**
> DRI/MCGRAW HILL ANALYST

TRW makes a wide range of auto products, including air bags, steering gears, valves and seat belts. A company statement pledged continued support for the air bag and power rack-and-pinion steering system businesses.

Gorman: joins Asia trip

Chairman Joseph Gorman is among 21 business leaders joining President Bush on a 12-day trip to next week.

■ Allied-Signal, a $12-billion-a-year supplier of lighting and anti-lock brakes, said it will close or consolidate eight automotive plants in the coming months. In addition, it will close factories in Reno, Nev., and Salisbury, N.C., that are part of its Bendix Heavy Vehicle Systems group.

In October, the company announced other corporate changes, including the sale of automotive sensor and filter businesses.

The moves will cost Allied an $880 million charge against earnings and will result in layoffs of 5,000 workers.

■ Tenneco Inc. said last week it will eliminate 4,000 jobs in its farm equipment company and another 2,000 in other areas, including the automotive business.

A company spokesman said Tenneco Automotive also will be affected by a plan to chop $250 million out of 1992's capital spending program, but would not be more specific.

However, he said the division is a key source of profits for the corporation, and the company expects its profitability to be enhanced as auto sales rebound.

Bernard Campbell, director of automotive analysis for DRI/McGraw Hill in Lexington, Mass., noted that many smaller suppliers have attempted to scale back in the past two years of declining auto sales.

“There is a squeeze on suppliers,” Campbell said. “They're being asked by the automakers to do two conflicting things at one time. The carmakers are being pressured to reduce costs, and they're asking their suppliers to do the same.

“But at the same time, the carmakers are also pushing them to improve products and technology,” Campbell said. “This is not an easy time for suppliers to make a profit.” ■

MERCURY VILLAGER FOR 1993

Model	Wheelbase (inches)	Length (inches)	Width (inches)	Height (inches)	Curb Weight (pounds)	Base engine	Drive type	Body styles
Mercury Villager	112.2	189.2	73.7	67.6	3,982	3.0L, V-6	4wd	minivan

VILLAGER

New minivan enters crowded field

continued from PAGE 3

to expected to heavily conquest station wagon and competitive minivan owners, and should result in a high percentage of incremental business with up to 85,000 in annual sales, Miskowski said.

He said the division will take dealers to Florida and Arizona to drive the vehicle and learn how to sell its features.

“We're mapping out a plan for every Lincoln-Mercury-supervised dealer” — those not dualed with Ford — to get a list of nearby minivan owners, he said.

The Villager will go on sale officially in September as a 1993 model but begin appearing in showrooms in late June or July, L-M officials said. It will be available in only LS luxury or GS sporty trim versions.

The GS comes standard with such common items as power rack-and-pinion steering, power brakes, a brake-shift interlock system, tinted glass, interval windshield wipers, cloth-covered reclining bucket front seats and an AM/FM stereo with four speakers.

The LS version adds standard Bosch four-wheel anti-lock brakes, a rear window defroster, automatic speed control, power windows and door locks and front air conditioning.

The Mercury Villager has dimensions similar to Chrysler Corp.'s minivans.

Mercury is considering standardizing ABS, optional on the GS, “across the board,” according to Miskowski.

The minivan meets all safety standards for passenger cars. But air bags won't be available until the 1994 model year. “Sure, we wish we had an air bag,” Miskowski admitted, but said ABS is a more important safety feature.

The Avon Lake plant, with overtime, can produce up to 135,000 units a year. At that rate, Mercury would get 85,000 units and Nissan 50,000, said Stephen Lyons, Lincoln-Mercury's general marketing manager.

Miskowski predicted a 1-million-unit minivan market in the 1993 model year.

Officials expect to build only 2,000 units between April and June and about 40,000 in calendar 1992. Lincoln-Mercury will get about 28,000 to 30,000 of that, Miskowski said.

The single overhead camshaft Nissan engine generates 150 horsepower and 170 pounds-feet of torque.

An optional towing package gives the Villager a 3,500-pound towing capacity.

Although the Nissan engine is imported from Japan, Lincoln-Mercury officials said the Villager exceeds the 75 percent U.S. content minimum to make it a domestic vehicle under EPA rules. ■

BMW dealer rebate tops 'em all; it's $10,000 on '91 750iL sedan

incentive WATCH

ARLENA SAWYERS
Staff Reporter

BMW is paying its dealers the industry's highest rebate, and Chrysler Corp. has announced a new consumer incentive program that offers national and regional payments.

Also, Chevrolet and American Honda Motor Co. Inc. are offering factory-to-dealer incentives on some 1991 and/or 1992 vehicles.

BMW is paying its dealers a rebate of $10,000 on its slow selling 1991 750iL four-door sedan. No expiration date was announced, dealers said.

Chrysler's new program began Dec. 21 and ends Jan. 31. It replaced the plan that was to expire Dec. 31.

National rebates range from $500 to $2,000; regional rebates are $500 to $1,500.

Chrysler is continuing its incentives of $500 for college graduates, $400 for first-time buyers of Jeep Wrangler; and $500 for adaptive controls for handicapped buyers.

In lieu of rebates, consumers may choose special finance rates ranging from 0 to 9.9 percent depending on vehicle, contract length and region.

Chrysler's special Gold Key Plus finance rates are still available on some vehicles.

For Dec. 17-31, **Chevrolet** is offering factory-to-dealer rebates of $1,000 on 1991 and 1992 C/K regular cab pickup and C/K chassis.

Also, through Jan. 5, Chevrolet dealers earn up to $1,000 on combined sales of 1992 and 1991 Cavaliers and Geo Storms based on performance against quota.

Through the end of the year, American Honda is paying its U.S. dealers $500 on sales of all 1991 **Honda** cars except the CRX. AN

Ford offers Hertz customers new-car rebates

LIZ PINTO
Staff Reporter

Ford Motor Co. wants to put Hertz customers in the drivers' seats of its new vehicles.

Ford is offering a $250 cash-back certificate to Hertz customers who rent a Ford Escort or Mercury Tracer. The offer is good toward the purchase or lease of any 1992 Ford, Mercury or Lincoln. Ford owns 49 percent of Hertz.

"This is one of many special marketing efforts we are trying to spur sales," said Carolyn Burke, marketing programs manager for Ford sales operations news. "Right now, any sale would be welcome."

A person who rents an Escort or Tracer between Nov. 15, 1991, and May 1, 1992, receives a letter outlining the cash-back offer. The letter is signed by Lee Miskowski, general manager of Lincoln-Mercury Division, and Ross Roberts, general manager of Ford Division.

The letter expresses thanks for renting a Ford vehicle from Hertz and says, "Because of your Hertz 'test drive,' we have a special cash-back offer just for you." Persons who return an enclosed card receive a $250 cash-back certificate that must be used before May 2. The coupon can be used in combination with other Ford incentives.

In California, Hertz renters of Lincoln Town Cars are the targets of a program that entitles them to a $500 cash-back coupon toward the purchase or lease of 1992 Lincoln Town Cars. AN

INCENTIVE WATCH — CUSTOMER INCENTIVES

NEW PROGRAMS

CHRYSLER CORP.

Expires Jan. 31. Finance rates in lieu of rebates run from 0 to 9.9 percent on Sundance, Shadow, Acclaim, Spirit, LeBaron sedan and Cherokee, and from 4.9 to 9.9 percent on other models.

In addition to the rebates on retail purchases listed here, Chrysler Corp. offers rebates under its Gold Key Plus Program. The rebates, which expire Dec. 31, are $250 to $2,000 on 1992 models and $150 to $1,975 on 1992 models.

1990-92 models	
NATIONAL REBATES	
Chrysler Imperial	$2,000
Dodge Monaco	$1,500
Shadow	$1,000
Colt 3-door	$500
Dodge Ramcharger	$2,000
Eagle Premier	$1,500
Talon	$1,000
Summit 3-door	$500
Jeep Comanche	$750
Wrangler	$500
Plymouth Laser, Sundance	$1,000
Colt 3-door	$500
REGIONAL REBATES: Northeast	
Chrysler LeBaron sedan	$1,500
Dodge Spirit	$1,500
Dodge Dakota	$1,000
Jeep Cherokee	$1,500
Plymouth Acclaim	$1,500
All Chrysler Corp. minivans	$1,000
REGIONAL REBATES: Central, West	
Chrysler New Yorker Fifth Avenue	$1,500
New Yorker Salon, LeBaron sedan	$1,000
Dodge Dynasty, Spirit	$1,000
Dodge Ram gas pickup (Central only)	$1,500
Ram wagon	$1,000
Dakota	$750
Dodge Ram gas pickup (West only)	$750
Ram 50 pickup	$500
Jeep Cherokee	$1,500
Plymouth Acclaim	$1,000
All Chrysler Corp. minivans	$500

CONTINUING PROGRAMS

FORD MOTOR CO.

1992 models

Expires Feb. 4. In lieu of rebates, finance rates of 2.9 to 7.9 percent are offered. Finance rates differ by vehicle lines and regions. No finance rate incentives on Lincoln models.

Loyale (1991-92)	$500
XT, XT-6 (1991)	$2,000

Excalibur's new owner sets April goal for car

SALLY GARBO WEDDE
Special Correspondent

WEST ALLIS, Wis. — Excalibur Automobile Corp., which was purchased from bankruptcy court in November and hasn't produced a vehicle since June 1990, has hired workers to produce a car possibly by April.

The company plans to make four types of cars in its first year: the luxury Excalibur Series V roadster, phaeton and sedan, and a version of the more basic Excalibur Series III roadster.

The new Series III will be more "rustic" than Series V, owner Michael Timmer said. The luxury car will sell for about $75,000 and the more basic car, $50,000, he said.

Timmer said the Series III roadster will be redesigned, and six workers will produce the first car, possibly by April. Those six then will train 18 to 20 workers, who will build three or four cars a month.

The 27-year-old plant, which has been closed since July 1990, needs about $1 million worth of improvements, Timmer said. He will begin the improvements immediately.

Comptroller Warren Hammond said the company is trying to set up a dealer network in the United States as well as Germany, Japan, Italy and France. "I think the name Excalibur has a bigger charisma outside the U.S.," Timmer said.

Timmer, 40, a real estate developer who lives in Kottweiler-Schwanden, Germany, said he sold used Excaliburs as a hobby but had no relationship with the manufacturer until now. Scott Dennison, who was engineering director and, briefly, president of the company before the bankruptcy, is serving as vice president and chief engineer, Hammond said.

Timmer bought Excalibur Corp. out of bankruptcy court in November for $1.33 million. AN

Daihatsu nears Malaysia pact to produce cars

STEVEN VINES
Staff Correspondent

HONG KONG — Malaysia is poised to launch a second national car project in cooperation with Daihatsu Motor Co. Ltd.

The Japanese company reportedly will link up with Malaysia's UMW Holdings Berhad to manufacture sedans based on a Daihatsu model. Malaysian Prime Minister Mahathir Mohamad told the state-run Bernama news agency that "the government has agreed 90 percent to the project."

The project would complement Malaysia's first national car company, which is making the Proton Saga. The Proton project is a joint venture between Mitsubishi Motor Corp. and the government. The Daihatsu project would be a joint venture with the private sector.

UMW is the local assembler and distributor of Toyota vehicles. Toyota Motor Co. of Japan owns 14 percent of Daihatsu Motor Co.

Final details are expected to be agreed early next year.

The new company is expected to receive the kind of preferential duty allowance enjoyed by the Proton project. AN

Highway death toll lowest since 1961

WASHINGTON — The death toll on the nation's highways is expected to drop to fewer than 41,350 in 1991, the lowest count in 30 years, said the National Highway Traffic Safety Administration.

That will be down 7 percent from 1990's 44,529 highway deaths, said Jerry Curry, NHTSA administrator.

The death rate per 100 million miles driven dropped to 1.9 this year, the lowest it has ever been, Curry said. ■

'91 build is lowest since '82

ANNE E. WRIGHT
Chief Statistician

Car and truck production in the United States and Canada for the 1991 calendar year is estimated at 10,721,963, down 8.94 percent from the 1990 total and the lowest since 1982 when 8,146,038 vehicles were produced.

Car production in the United States is down an estimated 11.7 percent from 1990, making it the lowest year since 1982.

In Canada, 1991 car production is estimated at 1,072,924, down 0.5 percent from last year.

U.S. truck producers estimated their 1991 output at 3,442,998, down 9.5 percent from 1990 and the lowest calendar-year total since 1984.

Canadian truck producers' estimated 1991 build is 841,452, up 2.7 percent over 1990.

The Big 3 have extended the holiday vacation at 25 U.S. and Canadian plants. Twenty-two plants will be idled due to slow sales.

Ford Motor Co. will idle 14 plants the week of Jan. 6 due to slow sales. They are the Lorain, Ohio; Wayne, Mich.; Dearborn, Mich.; Oakville, Ontario; St. Thomas, Ontario; and Kansas City, Mo., car plants and the Lorain, Ohio; Edison, N.J.; St. Paul, Minn.; St. Louis; Michigan Truck; Norfolk, Va.; St. Thomas, Ontario; and Kentucky Truck truck plants.

Ford will also idle the Wixom, Mich., car facility due to a materials shortage caused by an explosion at TRW's Romeo, Mich., air-bag plant.

General Motors will idle the Oshawa, Ontario (No. 1); Oshawa, Ontario (No. 2), and Wentzville, Mo., car plants and the Shreveport, La.; Detroit, and Pontiac, Mich. (West), truck plants the week of Jan. 6 due to high inventories.

The Fort Wayne, Ind., truck plant will be idle the weeks of Jan. 6 and Jan. 13.

The Allante line at the Detroit-Hamtramck, Mich., car facility will be idle the entire month of January for model changeover. Production of 1993 models will begin in February.

GM's Lake Orion, Mich., car plant and the Pontiac, Mich. (East), truck plant will be down until Jan. 27 for plant maintenance.

Chrysler Corp.'s Sterling Heights, Mich., facility will be closed the first two weeks of January due to slow sales. Chrysler will idle additional plants following the holidays but will not name them until Jan. 2.

Honda of America Manufacturing Inc. scheduled overtime last Saturday at the Marysville, Ohio, and East Liberty, Ohio, car facilities.

Last week, U.S. and Canadian car producers' estimated production was 146,482, down 0.7 percent from the prior week and up 36.6 percent from the year-ago week. ■

Saab unveils multi-fuel car

TROLLHATTAN, Sweden — Saab has built a prototype 9000 sedan that will operate on gasoline, methanol or ethanol fuels.

The engine incorporates advanced fuel injection and ignition system enhancements and a "six-liter blending tank" in order to properly digest gasoline or alcohol-based fuels. The blending tank ensures that the fuel combinations will mix in a controlled manner, allowing the electronically controlled ignition and fuel system to adapt to the fuels' differing properties.

Saab has applied for patents on the unique system, which does not require a separate alcohol-content sensor but relies solely on the standard exhaust pipe oxygen sensor.

Media cast grim view of GM

PHIL FRAME
Staff Reporter

General Motors: The corporate dinosaur; fallen symbol of capitalism; uncreative; complacent; arrogant; fat; sluggish; devious; greedy; at once grinchy, scroogy and overly generous.

That's the GM that has appeared in the print media since the company announced a major retrenchment in its U.S. and Canadian operations on Dec. 18.

The media portray a U.S. automobile industry in dire straits, possibly on its last legs. If GM fails to turn itself around, several news reports suggest, the whole U.S. car industry could collapse.

On Dec. 22, *The New York Times* carried a report from Tokyo quoting a senior Japanese diplomat saying he sympathized with Americans who were witnessing the collapse of their car industry.

Says *Newsweek* in its Dec. 30 issue: "GM's Christmas massacre was a stark symbol, the downsizing not just of a company or of an embattled industry, but of America's expectations."

GM Chairman Robert Stempel's plan to eventually close 21 plants and remove 80,000 workers — 60,000 hourly, 20,000 salaried — from U.S. and Canadian payrolls would give the 1995 version of GM just half the employment of the 1985 GM.

But some media reports said GM still misses the point.

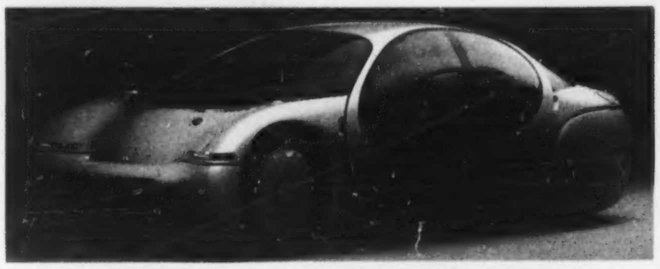
GM builds 100-mpg 'Ultralite' car

Two-stroke powers sedan to 135 mph

JACK KEEBLER
Staff Reporter



Aviation wizard Burt Rutan helped design and build the Ultralite's body out of carbon fiber. The four-passenger sedan weighs just 1,400 pounds.

WARREN, Mich. — General Motors has secretly built a four-passenger car that performs like a quick production car and gets just a shade under 100 mpg.

It will not be a secret for long.

GM will show the 1,400-pound sedan at the North American International Auto Show in Detroit next month.

The "Ultralite" will showcase GM's latest thinking on aerodynamics, emissions, safety and advanced two-stroke powertrains.

For the car's lightweight carbon-fiber body, GM turned to Burt Rutan, the aviation wizard who flew the lightweight Voyager plane around the world non-stop on one tank of fuel.

Rutan is founder of Scaled Composites Inc. of Mojave, Calif., which specializes in leading-edge aircraft designs in high-tech plastics.

Unlike most concept cars that promise super-high mileage, Ultralite is no lightweight in the performance department. The company reports that the car goes from zero to 60 mph in just 7.8 seconds and has a top speed of 135 mph.

"We wanted the car to be exciting," said Donald L. Runkle, vice president of GM's Advanced Engineering Staff. "We wanted the car to be fast. We wanted it to be fun to drive, not just because it got 100 mpg."

Runkle said the company has attempted to make the vehicle comply as closely as possible to production standards. This required meeting engineering and design targets normally reserved for production vehicles: ultra-low emissions, current and future safety standards, comfortable accommodations for four, and even an automatic transmission and air conditioning.

Runkle's Advanced Engineering Staff provided overall program management.

The primary goal for the project, which began in late April, was 100 mpg. But team members decided in a May "brainstorming" session that economy without good performance, reasonable passenger capacity, low emissions and the ability to comply with federal safety standards would be the engineering equivalent of an empty promise.

High-mileage concept cars recently shown by Japanese carmakers at international auto shows have drawn heavy criticism from U.S. makers because they aren't practical for production.

Although Runkle admits that

see ULTRALITE, 31

1991 newsmakers of the year

A year of 'agony', Page 6; Flops and coups of '91, Page 8; Staff predictions for '92, Page 29 ➤

Richard Bryan: Nevada senator makes makers nervous on CAFE and safety. His proposal for a 40 percent increase in CAFE was a big issue in 1991 and will be even bigger in 1992.

John Dingell: Detroit's friend in Washington looks for skeletons in Toyota's closet. Powerful Michigan congressman has long record of support for domestic auto manufacturers.

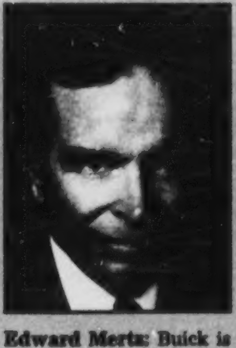
John Grettenberger: Is making a Cadillac a Cadillac again. Seems to have a pair of winners in the 1992 Eldorado and Seville. Hey there, young rich folks, Cadillac wants you in a Cadillac.

Lee Iacocca: While outsiders speculated on Chrysler's demise, he cut costs and floated a stock issue. Enlisted Ford's and GM's support in charging Japanese with dumping minivans.

J. Davis Illingworth: Solid sales gain for Lexus in 1991 proves that first-year success was no fluke. Plus, his division has new products as it reaches for more of the high-priced market.

Nobuhiko Kawamoto: Honda becomes No. 3 in car sales in United States, introduces new Civic and Prelude. Honda Japan president shakes up management structure and entire corporate culture.

Robert Lutz: Emerges as major Japan-basher, heir apparent to Iacocca and apostle of quality. Directed Chrysler's slimming-down and adoption of vehicle platform teams. Brings global view.



Edward Mertz: Buick is up in a down year, the only domestic to show a sales gain for the 1991 model year and the calendar year to date. General manager cleared up Buick's fuzzy image.

James Moran: Rough days for a big operator (about 150,000 cars and trucks a year) as garden-variety legal problems for Southeast Toyota Distributors blow up into international tension.

Robert Stempel: Stresses quality as prime aim, even if all those new cars are slow off the line. After brutal year, announces sweeping cost-cutting program to make GM profitable.

JIM DUNNE/POPULAR MECHANICS

T-bird flies with new beak

Planned installation of the single-overhead-cam version of Ford's 4.6-liter modular V-8 will allow designers to lower the hoodline on the 1993 Thunderbird, as demonstrated in this spy photo of a prototype. The "mod-eight" will replace the taller 5.0-liter V-8 now used. A dual-overhead-cam version of the engine may show up later in the Thunderbird Super Coupe.

Quiz

Look on the bright side. The best thing about 1991 is that it's over. The year will be remembered for: the Big 3 bathing in red ink, Peugeot and Sterling throwing in the towel, monthly sales that never beat the year-ago tally, General Motors announcing major cutbacks in personnel and facilities, and the Big 3 accusing some Japanese makers of dumping minivans in the U.S. But that's not all. Test your memory — if you dare to remember. Answers are below.

1. Three domestic car nameplates did not make it from the 1991 model year to 1992. Name them.
2. What was the top selling vehicle in the 1991 model year?
3. Only four automakers had vehicles on the list of top 10 sellers for the 1991 model year. Name them.
4. Which plant in the United States produced the most 1991-model vehicles?
5. What is the largest automobile auction group in the United States?
6. Malcolm Bricklin returned to the automotive scene this year. What is his latest scheme?
7. What is the lowest-priced 1992 model that is currently on sale?
8. What is the highest-priced 1992 car that is currently on sale?
9. What is the yearly turnover rate for salespersons at car dealerships?
10. Who returned to the helm of an auto import firm 2½ years after being ousted from the same job?
11. Is the National Automobile Dealers Association for or against customer incentives?
12. How many women are vice presidents of the Big 3? Name them.
13. Which makers made big splashes last summer with announcements of lean-burn engines?
14. What is the federal luxury tax on automobiles?
15. The Big 3 have formed consortia to study seven areas. Name at least three of those areas.
16. Lee Iacocca announced his retirement date. When does he plan to vacate the Chrysler helm?
17. Three top executives of auto companies operating in the United States are over 65. Name them.
18. Only one domestic make has sold more cars in 1991 than in 1990. Name it.
19. How many consecutive years has the Honda Accord been the top-selling car in the United States?
20. How much did General Motors pay former chairman Roger Smith in pension for 1991?

ANSWERS
1. Buick Reatta, Oldsmobile Calais and Pontiac 6000
2. Ford F-series pickup
3. Ford, Chevrolet, Honda and Toyota
4. The Ford truck plant in Louisville, Ky., which produces the Ford Explorer, Ford Ranger and Mazda Navajo
5. Manheim Auctions
6. To refurbish and sell used cars on a 50-acre Phoenix site called the Auto Ranch
7. The Mitsubishi Precis ($6,579)
8. The Aston Martin Virage ($227,250)
9. 50 percent
10. Yugo America's William Prior. He left again last month.
11. For them
12. Four: Marina v.N. Whitman, Betsy Ancker-Johnson and Shirley Young of GM and Helen O. Petrauskas of Ford
13. Honda and Mitsubishi
14. 10 percent on the amount of the transaction price that exceeds $30,000
15. Auto oil, batteries, CAD-CAM, composites, environment, multiplexing and recycling
16. At the end of 1992
17. Lee Iacocca, Robert McCurry and Harold Poling
18. Buick
19. Three
20. $1.2 million

briefly

You give more for the same go

You're just blowing bucks out the tailpipe if you think you're getting better performance from high-octane gas. The Federal Trade Commission just got Sunoco to agree that its claims of more engine power and zip from its Ultra brands are without "reliable scientific evidence." If the owner's manual doesn't call for premium, don't use it.

PENNANT FEVER — Not every **Ford** supplier is excited about the banner that goes with a Q-1 quality award. **Nissan Motor Manufacturing Corp. U.S.A.** builds the body panels for the **Mercury** Villager/Nissan Quest minivan, but the jury is still out on whether it will have to qualify as a Q-1 supplier. If it does, quips Jerry Benefield, chief executive officer for Nissan and an ex-Ford guy, "I don't think I'll fly the flag."

Benefield: no flag here

HOME DELIVERY — **Oldsmobile** kicked off the public introduction of the Achieva when 85 **General Motors** employees flew to Los Angeles from Lansing, Mich., last week to deliver an Achieva to the car's first buyers in Southern California. The launch included a press conference in front of Greg and Mimi Wenger's Marina del Rey home and a block party for the neighborhood. Olds hopes that the Achieva will help curtail domestic defection in car buying and that it will attract buyers in the 35- to 45-year-old age group. One out of two isn't bad. The Wengers are both 60.

IT LOOKS REAL — Radio Beijing says Chinese authorities in Hunan province are cracking down on counterfeit versions of "famous-brand" goods. You can tell it's not a genuine **Chrysler** Fifth Avenue if the anti-lock brake system has been hand-carved.

THAT'S GRATITUDE — **Toyota Motor Sales U.S.A. Inc.** honored Tim Benson of Hampton University and Brad Culpepper of the University of Florida with Toyota's 1991 Leader of the Year Award. "I'm grateful you've acknowledged my accomplishments," said Benson. "And also for not taking into account what kind of car I drive." He just bought a **Nissan** Sentra.

LOOKING AHEAD — The Commerce Department decided the **Mitsubishi** Expo and Expo LRV are not minivans, so they dumped Mitsubishi from the dumping case filed May 31 by the Big 3. (**Mazda** and **Toyota**, found guilty of dumping, react on Page 10.) But evidently investigators think some Japanese companies besides Mazda and Toyota might import a minivan someday, and when they do, the dumping penalty will be 4.23 percent. So there.

HOW TO SELL CARS — Spring is the selling season, right? So dealer Bruce Griffin of Griffin Motor Co. in Monroe, N.C., ordered the showroom walls turned into a 60-foot mural of a spring sky with puffy white clouds, blue sky and sunshine. It makes you think of "cruising with the wind blowing through your hair," says artist Jean Stromberg, who designed the painting for the **Pontiac-Buick-GMC-Isuzu** point.

in brief

RECREATIONAL VEHICLES

Choo Choo plans return to business

CHATTANOOGA, Tenn. — Choo Choo Customs Inc., formerly one of Chevrolet and GMC Truck's largest van converters, expects to begin operating again in January.

Choo Choo filed for Chapter 7 bankruptcy protection Sept. 23, the victim of hard economic times.

Since then the Faires Group, a Knoxville, Tenn., investment company, agreed to pump enough cash into Choo Choo to put it back into operation, said John Rogers, Choo Choo's president.

Both Rogers and Terry Rutherford, who had been the firm's executive vice president, will continue in their same positions.

Choo Choo has a core of 200 to 250 dealers with whom it has maintained steady contact and from whom it has received strong encouragement, Rogers said. It sells through about 500 to 600 dealers nationally.

Rogers said the company would be more focused on converting compact and full-sized General Motors vans when it resumes production, though it still expects to do some other types of vehicle customizing.

He anticipates converting 3,000-plus chassis in calendar 1992 and between 5,000 and 6,000 in 1993.

Choo Choo has retained its former sales and production people for the startup.

Chupp & Sons scores with Dodge

Chupp & Sons Conversions Inc. of Elkhart, Ind., ranked fourth among Dodge Division's top 10 consignment pool accounts in November, its first month as a pool member.

For the 1992 model year through November, Mark III Industries of Ocala, Fla., was Dodge's highest-volume converter, followed by Ram Coach Inc. of Elkhart; Starcraft Van Conversions of Topeka, Ind.; Elk Enterprises Inc. of Elkhart; and Glaval Inc.'s Prime Time operation in Elkhart.

Some converters were delayed in getting up to full speed in producing 1992 models because they had to adapt to new federal safety regulations which took effect at the start of the model year.

RVIA sees record shipments in 1993

RESTON, Va. — The Recreation Vehicle Industry Association estimated van conversion wholesale shipments at 134,000 for calendar 1991, 23.1 percent below the previous year.

John DeWolf, economic consultant for RVIA, sees shipments picking up by 35.1 percent in calendar 1992 to 181,000 units.

In 1993, he sees shipments reaching an all-time record of 206,000 units, just ahead of the previous record of 204,200 shipped in calendar 1988.

Makers use incentives to boost market

Cautious floorplanning may bring spring crunch

JOSEPH BOHN
Truck Editor

Auto dealers, worried about floorplanning costs, have been reducing their van conversion inventories. But the Big 3 are countering with incentives to pump up the market.

Dealer inventories of van conversions are "a little lower" than last year's low levels, according to Jim Green, Chevrolet assistant RV manager. He declined giving specific numbers, but said this year's inventory is a lot newer.

Caught by a war last year, dealers were still carrying a lot of 1990 conversions during December and January. Now, "most of what's around is fresh (1992 model) stuff," confirmed Gary Soos, general manager of Custom Craft, a Milwaukee-based converter.

He noted that some dealers had been calling him and other converters seeking 1991 chassis without any success.

Chevrolet and GMC have been building a lot of extra inventory and stocking it with converters in anticipation of the Lordstown, Ohio, plant shutdown and a strong spring upturn.

With low inventories, dealers are likely to go into the spring market short of product — as they did last year.

General Motors, though, will be in a "good position," Green said.

"I'm very pleased with the way converters have stepped up to order extra product, even in the current economic climate," he said.

To hike demand, GMC Truck did a direct-mail rebate offering at the end of November to 250,000 van conversion owners and first-time buyer prospects.

The rebate offers an additional $1,000 off on 1991 and 1992 full-sized G-van conversions and $800 off on compact M-van conversions through Feb. 4.

Chevrolet and GMC have already been offering $1,000 rebates on 1991 and 1992 full-sized conversions and 1991 M-van conversions through Feb. 4. They also have a $750 rebate on 1992 M-van conversions through that date.

Although GMC's direct mail literature doesn't say so, any customer can take its rebate coupon to a Chevrolet dealership and get the same discount on the same products. Chevrolet notified dealers of the interchangeability of the coupon in a bulletin.

Some dealers are already advertising their acceptance of the coupons.

The interchangeability is designed to avoid antagonizing potential Chevrolet buyers.

For its part, Chevrolet has done a direct mailing to 800,000 prospective commercial van buyers. They qualify for an extra $800 rebate on G-vans outfitted with selected vocational equipment such as interior bins and racks; $700 on Astro cargo vans; $600 on High Cube vans; and $500 on APV Cargo vans. The offer is good through through Feb. 4, according to Kari St. Antoine, a Chevrolet spokeswoman.

Chevrolet's direct mail rebate coupons can also be used on GMC vans.

Ford, with a completely restyled Econoline, has been reluctant to discount it as heavy as competitors. The company did increase its previous $500 customer rebate on Econoline van conversions to $1,000 on Dec. 4. The program runs through Feb. 4.

The programs encourage dealer stocking. Ford also is offering dealers an extra 90 days' free floorplanning on van conversions in addition to the 60 days they automatically get.

"Ford is trying to get more units out to the dealers and get more dealers involved in selling conversions," said Jerome Mittman, Ford RV sales manager.

Dodge dealers are still stocking conversions at a relatively strong level, according to a Chrysler Corp. source.

But Chrysler also is supporting the market with special incentives.

From Dec. 21 to Jan. 31, the company has $1,000 rebates or alternative low-interest financing on Dodge Ram Wagon vans and van conversions and $750 on minivans, including the commercial Caravan C/V that is used by converters. ■

Tough stuff

Advanced Generation Motors in Miami has created the Rhino, billed as the "world's most luxurious bullet-resistant" vehicle. The price of the Rhino ranges from $60,000 to $135,000, depending on options such as bullet-proof glass, army tank-like armor and a bomb blanket. Company President Alejandro Gonzalez, a Nicaraguan refugee and former Yugo dealer, plans to come out with a more aerodynamic family passenger version in 1992. The vehicle is basically a conversion of the Mitsubishi Montero.

Big 3 expect hike in motor home sales in 1992

JOSEPH BOHN
Truck Editor

The Big 3 see an increase in motor home sales for calendar 1992, a market in which they are major chassis suppliers.

Jerome Mittman, Ford Division RV sales manager, sees conventional Class C motor homes, which are built on Econoline cutaway chassis, increasing to about 16,000 in calendar 1991 from an estimated 13,600 in 1991.

Ford has improved its 1992 Econolines with better ride, handling and steering controls.

The company also plans to offer a larger 50-gallon tank in the unit by March. The Econoline stripped chassis currently come with a standard 35-gallon tank.

Ford is a major supplier of this market with an estimated 85 percent share, according to Mittman. Chevrolet has the other 15 percent.

Chevrolet will make its major move in Class C models this fall, though, when it introduces its new GP-cutaway.

The unit features a G-van cab mounted General Motors' P-chassis. Thomas Jensen, an engineer with GM's Truck & Bus Group, said the GP cutaway motor home chassis will offer high gross vehicle weight ratings up to 14,500 pounds.

The chassis also will feature 158.5-inch to 208-inch wheelbase lengths, a choice of suspension systems, and a new fiberglass front tilt cab for easy serviceability.

Thomas Pfingst, Chevrolet assistant director of fleet sales, truck and special vehicles, believes the GP will give his division a big edge on Ford's chassis, which is limited to 11,500-pounds gvw.

Class C motor homes have been seeking higher gvws as buyers ask for larger floorplans and more options in their vehicles.

Chevrolet and Ford also compete fiercely in the Class A motor home business, where Chevrolet has over 60 percent of the market.

Industry officials estimate sales of 25,000 Class As for calendar 1991, and are looking for an increase to about 30,000 in calendar 1992.

Source: Recreation Vehicle Industry Association

Ford has been coming on strong with its new Super Duty Class A, which garnered about 28 percent of the market in 1991.

Chevrolet captured slightly more than 60 percent of the market, according to Pfingst's estimate.

Other chassis suppliers, such as Oshkosh Truck Corp. in Oshkosh, Wis., make up the balance of the market.

The major suppliers, such as Ford, Chevrolet and Oshkosh, also supply these same chassis to the commercial vehicle market.

That market has actually been off a lot more than RVs, according to industry officials.

It's one of the reasons Chevrolet choose to do special rebate offer to commercial vehicle buyers in its direct mail program. ■

Staff foresees 5.2% sales gain for '92

JOHN K. TEAHEN JR.
Senior Editor

The editors and reporters of *Automotive News* are optimists, but they are not a bit like the "Cockeyed Optimist" that Mary Martin and Mitzi Gaynor sang about so engagingly in *South Pacific* a generation ago.

The staff looks for sales increases in all sections of the car market and in light trucks in 1992, but staff members expect only the sales of transplant cars to show a significant upturn.

The editors and reporters predict sales of 12,898,000 new cars and light trucks in the United States in 1992. That is a moderate gain of 5.2 percent over the 12,266,000 projected for the year of agony that ends tomorrow. Aside from 1991, the 1992 forecast is lower than actual sales in any year since 1983.

The 1992 estimate is the average of predictions by 29 *Automotive News* editors and reporter who participated in the annual guessing game.

While the staff sees an upturn in 1992, there is no unanimity of opinion about when the upturn will begin. Some said "after the election," with one GOP-phobe predicating it on the ouster of George Bush. Others think the sun may begin to peek through early in the year or in the second or third quarters.

Car sales are projected at 8,525,000 for 1992, an increase of 4.4 percent over this year, but the Big 3 are expected to play only a minor role in the gain. The staff sees 5,034,000 sales of Big 3 cars, up 2.8 percent.

Even so, that's a better performance than is expected for imported cars. Sales of 2,159,000 imports are forecast, up 2.4 percent.

Transplant cars are tabbed as the stars of the show from a standpoint of year-to-year gains. The staff believes that 1,332,000 transplant cars will be sold in 1992, an increase of 14.7 percent over 1991.

Sales of light trucks for 1992 are projected at 4,373,000, up 6.7 percent over 1991.

AUTOMOTIVE NEWS SALES ESTIMATES FOR 1992
(in thousands)

	1992	1991	Pct. change
Big 3	5,034	4,896	+ 2.8
Transplants	1,332	1,161	+ 14.7
Total domestic	**6,366**	**6,057**	**+ 5.1**
Imports	**2,159**	**2,109**	**+ 2.4**
Total cars	**8,525**	**8,166**	**+ 4.4**
Total light trucks	**4,373**	**4,100**	**+ 6.7**
TOTAL CARS, LIGHT TRUCKS	**12,898**	**12,266**	**+ 5.2**

1992 figures are an average of estimates by 20 Automotive News editors and reporters. 1991 estimates were compiled by the Automotive News Data Center.

Costs at Ford plants in U.K. higher than Europe units

VAUGHAN FREEMAN
Staff Correspondent

An internal report circulating within Ford of Britain reveals unit labor and overhead costs are as much as 40 percent higher in Britain than at Ford's continental European plants.

And despite assurances all year that Ford's main Halewood and Dagenham factories have a secure future, a Ford spokesman has conceded that they are at risk in the long term, especially from Japanese manufacturers.

The internal Ford report reveals that while in 1990 it took almost 64 hours to build an Escort at the Halewood, Merseyside, plant, it took only 34 hours to build the same car in Saarlouis, Germany. While it took Ford 52 hours to build a Fiesta last year at Dagenham, Ford estimates that Fiesta-sized cars being built by key rivals like Toyota and Nissan in Japan take only 20 hours to build.

Productivity improved through 1991, especially at Dagenham, which in 1990 sent production of the Sierra to Genk in Belgium and concentrated on more efficient production of the new Fiesta.

FORD PRODUCTIVITY IN EUROPE

Factory/Vehicle	1989	1990	1991
Dagenham, England Fiesta	59.4	52.2	40.0
Valencia, Spain Fiesta	35.0	33.3	34.1
Cologne, Germany Fiesta	33.5	29.9	28.5
Halewood, England Escort	58.7	63.8	43.0
Saarlouis, Germany Escort	29.5	33.9	30.5
Southampton, England Transit van	70.4	73.2	64.0
Genk, Belgium Transit van	48.7	45.7	45.1

Source: Ford, according to Financial Times

Details of the report were disclosed in the London *Financial Times*; Ford did not release them.

"Basically, continental plants have been quicker to adapt to new working practices than the British," a Ford spokesman said. "Workers here take longer to change work methods and tackle the job. The equipment is identical here and on the continent. It has been an attitude of labor over the years that has been slow to adapt."

Price increases choke sales in Brazil

SAO PAULO, Brazil — New-car and truck sales, hit by soaring price increases after the government lifted price controls, fell 5 percent in November from a year earlier, to 68,950 units.

Sales declined 14.2 percent from October, the second full month without price controls on new vehicles.

Some new-vehicle prices have trebled since controls were lifted in September.

For November, Brazil's inflation rate was 27 percent.

In the first 11 months of this year, domestic sales surpassed the total for all of 1990. Eleven-month sales were 715,213, up 10.7 percent over the 1990 period and 3,000 above the full-1990 total of 712,659.

Although seemingly contradictory, some economists say the runaway prices for new cars in Brazil may actually be buoying sales in the short run.

Under that theory, buyers are rushing to acquire new cars at almost any price on the assumption that prices will go even higher. Others reportedly are buying cars as a speculative investment.

MEDIA

Reaction to GM cuts paints dark picture

continued from PAGE 1

Sure, GM needs to cut bulk that cannot be supported by its market share. But it must get leaner, not just smaller. Stempel must make the organization more efficient, bring cars to market quicker and design the cars so they can be built more easily, reports suggested.

The Dec. 30 *Time* magazine contends, "Still missing at GM is any real sense of what such 'lean' operations are supposed to create and produce."

A similar theme rings through the cover story of the Jan. 13 *Fortune* magazine. It was written by Alex Taylor III.

In addition to cutting jobs and closing plants, GM "needs to restructure radically to get more efficient at everything it does," Taylor writes.

"That will mean sacrificing some long-standing GM shibboleths, such as maintaining a separate marketing operation for each of its six car divisions — Chevrolet, Pontiac, Oldsmobile, Buick, Cadillac and Saturn," the *Fortune* article continues.

As *Fortune* notes, GM's cuts will improve productivity — the number of cars produced per employee. But they will do nothing to help efficiency — the number of worker-hours required to build a car.

GM even became a metaphor for fat, dumb and happy. In *The Wall Street Journal's* "Heard on the Street" column on Dec. 20, a money market manager criticized blue-chip IBM Corp. by saying, "I'm not sure that IBM isn't just a General Motors that makes computers."

HITS WERE EXPECTED

The rough treatment is something that any large American institution should expect, said GM spokesman Terry Sullivan.

"One of the key things in turning around the media's coverage of General Motors is to prove these critics wrong," Sullivan said, by "showing that we have the ability and the commitment to improve our profitability, to improve our competitiveness in the '90s and to continue to be the world's premier automotive manufacturer."

He said GM already has demonstrated its willingness to listen and ability to change by satisfying the mid-1980s critics who said the company had too many look-alike models of poor quality. Now, GM is receiving positive reviews for having high-quality, distinctive products, Sullivan said.

Many newspapers zeroed in on the timing of the GM cutback announcement, portraying GM as a grinch that "stole Christmas" from its workers by not naming the plants to be closed.

On Dec. 22, *The New York Times* reported: "The company's decision left thousands of employees and their families to worry that they'd be on the hit list. Except top management. The leadership, says GM's chairman, Robert Stempel, 'remains in place.' "

> "One of the key things in turning around the media's coverage of General Motors is to prove these critics wrong."
>
> **TERRY SULLIVAN**
> GM SPOKESMAN

For other papers, GM's cuts had bigger ramifications.

- *Los Angeles Times*, Dec. 23: The impact of the GM cuts on retailers "was like the last nail in the Christmas coffin."
- *The Toronto Star*, Dec. 23: GM's announcement "marks the end of the era when the paycheck-based middle class could count on stable, long-term employment and rising income with a major corporation."

Media also painted a picture of GM in a state of boardroom disarray.

Time quoted unnamed board sources as saying that GM's outside directors became so concerned about losses in recent months that they began meeting privately, without the company's officers.

The *Time* source indicated that the jobs of GM Chairman Robert Stempel, President Lloyd Reuss and chief financial officer Robert O'Connell may be on the line.

"These are crisis times, and Stempel may not be a man for crisis management," *Time* quoted a GM director saying. "The rules have changed overnight from the old collegial culture, and he may be disoriented and in over his head."

Fortune also suggests that the board is not all in Reuss' camp, evidenced by the fact that it named him president but not chief operating officer.

GM has no chief operating officer, a major flaw in its corporate structure, some experts suggest.

> Media also painted a picture of GM in a state of boardroom disarray.

LEARNING FROM HISTORY

The cutbacks announced just before Christmas sent scores of analysts, editorialists, reporters and experts combing through years of GM corporate history and lore and current statistics to find out what led the company into its current difficulties.

The results have painted a grim picture of GM, the U.S. auto industry and the collapsing middle class culture:

- *The New York Times*, Dec. 22: "Paleontologists say it took nearly a minute from the time a dinosaur's tail was nipped to the time it felt the pain. For the General Motors Corporation, that nip came way back in the 1970s, when imports first started creeping in."
- *Newsweek*, Dec. 30: GM's "response to the arrival of Japanese cars in the 1970s was late, confused and inept. Paralyzed by an entrenched and arrogant bureaucracy, GM jeopardized decades of consumer good will by building cars of shoddy quality and stodgy style."
- *The New York Times*, Dec. 22: "The jobs being abolished at the automotive plants are the kind of high-paying manufacturing jobs that were the foundation of the flourishing middle."
- *The Toronto Star*, Dec. 23: "Many experts . . . saw GM's cutback as tolling the final bell on a time of complacency in U.S. business."
- *The Toronto Star*, Dec. 21: "General Motors, for more than half a century the symbol of robust capitalism, prepares to cut back savagely."
- *Los Angeles Times*, Dec. 20: "In handicapping the industry, analysts say Chrysler has the ability to adjust to a changing market more quickly than GM or Ford. . . . GM is the last of the Big 3 automakers to make major changes in the quest for more efficient North American operations. Worker productivity is higher at the plants of the company's American competitors. And GM lags behind its U.S.-based competition in the profit earned on each vehicle."
- The Daily Telegraph from London, Dec. 20: "GM's arrogance . . . has not given way to humility. . . . Apart from direct job losses, dealers will close and suppliers will also have to cut back."

Credit rating disappoints GM

PHIL FRAME
Staff Reporter

General Motors said it was unfortunate that two credit agencies lowered their ratings for GM and General Motors Acceptance Corp. securities last week.

The ratings nonetheless will keep GM on the list of companies whose debt can be bought freely by money market funds. Securities and Exchange Commission rules prevent the funds from investing more than a small percentage of their assets in securities that do not have top ratings from at least two companies.

Failure to meet the requirement would have cost GM millions of additional dollars, as it would have been forced to borrow from more expensive sources to operate the business and floorplan its dealers.

Fitch Investors Services lowered its ratings on $5.4 billion worth of GM senior debt and $520 million worth of pass-through certificates from AA- to A.; $1 billion in preference stock from A. to A; $5 billion worth of GMAC senior debt from AA- to A.; and GMAC demand notes and several commercial paper programs from F-1. to F-1.

Meanwhile, Duff & Phelps Rating Co. lowered its ratings on GMAC senior debt from A. to A-. It rated GMAC subordinated debt for the first time at BBB.; and GMAC commercial paper for the first time at Duff 1. The ratings apply to about $79 billion worth of securities.

The other two rating companies — Standard & Poors Corp. and Moody's Investors Service Inc. — are reviewing the top ratings they have assigned to GM and GMAC securities and expect a decision this winter.

GM spokesman Terry Sullivan said it was "unfortunate the action was taken" by Fitch to lower its ratings.

Fitch "recognized the General Motors management and the board are taking significant action to improve the company's financial position and that the present economic environment was an influencing factor in the (rating) decision," Sullivan said.

Sullivan said he believes GMAC enjoys a healthy reputation in the financial community and probably will be able to get the money it needs at reasonable rates.

Other pickups	$600-1,000,
VOLKSWAGEN (no expiration date)	
Passat (1991)	$1,500
Jetta, Fox, Golf (1991)	$500
All 1990 cars	$500-1,500
VOLVO (1991 models; expires Dec. 31)	
240 series	$1,500
740 series	$1,750-2,500
940 series	$1,500-2,500
780 coupe	$2,500

CYCLES

Japan still prefers 4-year product run

continued from PAGE 3

Nearly all Japanese companies say they would like to have longer cycles, and company officials insist that is the trend. But no one expects a formal announcement of a policy change — in the way that companies lined up recently to announce U.S. component-buying targets — and no company has lengthened its product cycle on a major platform.

"We are thinking of extending cycles," said a Nissan Motor Co. spokesman. "How long — five or six or seven years — we can't tell you at the moment. But they will be longer than before."

The Nissan spokesman said suppliers who think Japan remains on a four-year cycle may not yet be aware of the change.

"It is happening already," he said, "but we won't see products until four or five years later. Obviously products launched next year or in two years won't be affected. It will filter down" to suppliers eventually.

Auto executives concede that longer product runs have not yet been implemented, except in some developing countries and on some specialty products.

"The next Accord will come after four years," said Honda President Nobuhiko Kawamoto.

That means it will arrive in the early fall of 1993 — probably at the Frankfurt Auto Show.

Can Honda ever risk five-year cycles on its bread-and-butter Civic and Accord models?

"At this moment, I cannot definitely say," said Kawamoto. "But in business conditions such as we have today, I think that could be one of the selections.

"It depends on the competitive conditions. We should be flexible. For instance, we sold the last Legend for five years, so we've already had an experience postponing one year longer. In that case, the sales totals were comparatively small. But at the same time we learned a lot."

Honda is a small player compared to Toyota Motor Corp., which has more than 40 percent of Japan's passenger-car market. If Toyota and Nissan go along with MITI and lengthen cycles to five years, the industry would have changed. But Toyota is apparently satisfied with a four-year turn.

"We think that a four-year cycle is very reasonable," said a Toyota spokesman. "Of course, there are advantages and disadvantages for making a model cycle shorter or longer. We have to mount the newest technology as soon as possible."

While all Toyota vehicles don't necessarily appear in precise four-year intervals, he said "basically, the system is to make a new car in four years."

A replacement for the current Toyota Supra, now in its fifth year, will not reach the market until February 1993 — extending the model cycle of the current version to six years. But a Toyota official says that does not reflect a change in policy: "We tried to do it in four years, but felt that we couldn't."

Western analysts see no benefit to the Japanese by lengthening cycles, since part of their market success has been based on quick introductions of new technology.

"I doubt if they would go" to longer cycles, said W. Wayne Booker, vice president of Asia-Pacific Automotive Operations at Ford Motor Co., who supervises Ford's relationship with Mazda Motor Corp. "I don't know why they would. They've developed a capability, why back away from it?"

A Tokyo auto analyst added: "I really haven't put much stock in the talk of longer cycles. Even a company like Toyota that is trying to project a less aggressive image is not backing off."

Clearly, some niche cars are not hewing to the four-year cycle. Nissan, for example, is about to launch a new March, its first entry-level model in 10 years. Mitsubishi in 1991 introduced its first new Pajero in nine years. The brand new Isuzu Bighorn/Trooper is the first since 1981.

"Specialty vehicles take a bit longer," said Stephen C. Usher of Kleinwort Benson International in Tokyo. "But Corolla, Accord, Bluebird are going to come out like clockwork every four years."

Not all specialty cars have longer runs. Toyota's current MR2 two-seater debuted at the Tokyo show in October 1989 and is said to be destined for replacement in the fall of 1993, with an all-new concept — a 2.0-liter small sports sedan.

In the past decade, American and European companies have been struggling to catch up with the four-year standard set in Japan. American development time has been cut dramatically, but product cycles remain at five to six years. For instance, Ford's Taurus was introduced in December 1985, and redone this year.

In Europe, product cycles are even longer. The Volkswagen Golf, Europe's top seller for the past several years, was replaced this fall after seven years on the market, and at that it was rushed to meet competition from General Motors' new Opel/Vauxhall Astra. That makes the Japanese four-year cycle highly political and has led to speculation of Japan going to a five-year cycle in Europe.

But the Toyota spokesman said a different European timetable is unlikely so long as product engineering is centered in Japan. When independent research and development centers are established elsewhere, longer regional cycles may be possible, he said.

Car company officials firmly deny that cycles will become even shorter.

A Mazda official said the technology exists to take the development cycle down to three years, but the company will not do it.

INCENTIVE WATCH — CUSTOMER INCENTIVES

CONTINUING PROGRAMS

CHRYSLER CORP.

Expires Jan. 31. Finance rates in lieu of rebates run from 0 to 9.9 percent on Sundance, Shadow, Acclaim, Spirit, LeBaron sedan and Cherokee, and from 4.9 to 9.9 percent on other models.

In addition to the rebates on retail purchases listed here, Chrysler Corp. offers rebates under its Gold Key Plus Program. The rebates, which expire Dec. 31, are $250 to $2,000 on 1992 models and $150 to $1,975 on 1992 models.

1990-92 models	
NATIONAL REBATES	
Chrysler Imperial	$2,000
Dodge Monaco	$1,500
Shadow	$1,000
Colt 3-door	$500
Dodge Ramcharger	$2,000
Eagle Premier	$1,500
Talon	$1,000
Summit 3-door	$500
Jeep Comanche	$750
Wrangler	$500
Plymouth Laser, Sundance	$1,000
Colt 3-door	$500
REGIONAL REBATES: Northeast	
Chrysler LeBaron sedan	$1,500
Dodge Spirit	$1,500
Dodge Dakota	$1,000
Jeep Cherokee	$1,500
Plymouth Acclaim	$1,500
All Chrysler Corp. minivans	$1,000
REGIONAL REBATES: Central, West	
Chrysler New Yorker Fifth Avenue	$1,500
New Yorker Salon, LeBaron sedan	$1,000
Dodge Dynasty, Spirit	$1,000
Dodge Ram gas pickup (Central only)	$1,500
Ram wagon	$1,000
Dakota	$750
Dodge Ram gas pickup (West only)	$750
Ram 50 pickup	$500
Jeep Cherokee	$1,500
Plymouth Acclaim	$1,000
All Chrysler Corp. minivans	$500

FORD MOTOR CO.

1992 models

Expires Feb. 4. In lieu of rebates, finance rates of 2.9 to 7.9 percent are offered. Finance rates differ by vehicle lines and regions. No finance rate incentives on Lincoln models.

Ford Festiva, Tempo, Taurus	$500
Escort GT and LX-E, Mustang, Thunderbird	$750
Probe, Taurus SHO, Crown Victoria	$1,000
F series, Aerostar	$500
Ranger	$750
Aerostar (Northeast), Bronco, Econoline (RV pkg.)	$1,000
Mercury Topaz, Sable	$500
Capri, Tracer LTS, Cougar	$750
Grand Marquis	$1,000
Lincoln Town Car, Mark VII, Continental	$1,000

Pre-1992 models

1990-91 Ford Division models and 1991 Lincoln-Mercury models. Expires Feb. 4. In lieu of rebates, finance rates of 2.9 to 7.9 percent are offered. Finance rates differ by vehicle line and region.

Ford Tempo, Taurus	$400
Taurus SHO	$600
Escort, Mustang, Thunderbird	$750
Festiva, Probe	$1,000
Ranger, F series, Aerostar, Econoline (except E-150 RV)	$400
Aerostar (Northeast), Bronco, Econoline E-150 (RV pkg.)	$1,000
Mercury Topaz, Sable	$400
Tracer, Cougar	$750
Capri	$2,000

GENERAL MOTORS

Expires Feb. 4. Finance rates in lieu of rebates start at 2.9 percent for Buick, Oldsmobile and Pontiac; 6.9 percent for Chevrolet and GMC.

1992 models	
Buick Skylark*	$250-750*
Century, Regal*	$250-1,000*
Riviera	$2,000
Chevrolet Caprice	$1,000
Geo Metro and Storm	$750
Geo Prizm, Camaro, Beretta, Lumina	$500
Cavalier	$500
G van, S/T Blazer, Lumina APV	$1,000
Geo Tracker, Astro, S/T pickup	$750
C/K pickup	$500
GMC G-van, S15 Jimmy (except Typhoon)	$1,000
Sonoma (except Syclone, GT), Safari	$750
Sierra (except Crew Cab)	$500
Oldsmobile Cutlass Ciera (national)	$1,000
Regional programs, various models	$500-2,000
Pontiac Trans Sport	$1,000
Grand Prix	$750
LeMans, Firebird	$500

*Based on option package selected.

1991 models	
Cadillac	
All models except Allante (expires Dec. 31)	$2,000
Chevrolet Caprice	$1,000
Geo Metro, Camaro	$750
Geo Storm and Prizm, Beretta, Lumina	$500
Cavalier, Corsica	$300

All models	Company pays U.S. luxury tax
SUBARU (expires Jan. 3)	
Legacy L and L Plus (1992)	$500
Loyale (1991-92)	$500
XT, XT-6 (1991)	$2,000

Rolls-Royce institutes lease deal

LYNDHURST, N.J. — Rolls-Royce Motor Cars Inc. has launched its first-ever leasing program. The Silver Service Lease Program covers all Rolls-Royce and Bentley models.

Robert Wharen, vice president of marketing and sales, said the program features a 36-month lease for business or personal use. As an incentive, Rolls-Royce is reimbursing the luxury car tax until Dec. 31 on 1991 models as it does on retail purchases.

For example, a Silver Spur II sedan be leased for $15,000 down and $2,299 per month for a 36-month closed-end term. A Corniche III convertible requires a $20,000 down payment and a monthly rate of $2,999.

At the end of the three-year lease, the customer can return the car or purchase it at a predetermined residual value. The value is based on the car being driven up to 7,500 miles a year.

The lease program is available only through Rolls-Royce and Bentley dealers.

Saab picks HQ site

NEW YORK — Saab Cars USA has selected a site in a suburb northeast of Atlanta for its new headquarters.

Saab announced in September it was cutting its headquarters staff drastically and moving to the Atlanta area. The new facility will be in Norcross, Ga.

Out of 167 headquarters staff, Saab is relocating only 20.

About 100 persons will be hired. That number may include some present employees who move, but most will be hired locally.

— Jim Henry

No production last week

DETROIT — All U.S. and Canadian vehicle assembly plants were closed last week for the holidays. As a result, the *Automotive News* production table is not being published this week.

Production at some plants resumes this week. Others are on extended holiday shutdowns, as detailed in the table at left.

GM defends bonuses to white-collar staff

THE ASSOCIATED PRESS

DETROIT — General Motors kept a promise to its white-collar workers when it paid them millions of dollars in merit bonuses before announcing sweeping cuts, a spokesman said last week.

Spokesman John Maciarz defended the company's decision to reward salaried workers despite its plans to eliminate 74,000 jobs and close 21 plants.

"We kept our promise to our employees," Maciarz said. "Equality of sacrifice is in the eyes of the person evaluating it.

"Hourly workers didn't get profit sharing, salaried workers didn't get Christmas bonuses or profit sharing and executives didn't get incentive pay, which amounts to about a third of their total compensation."

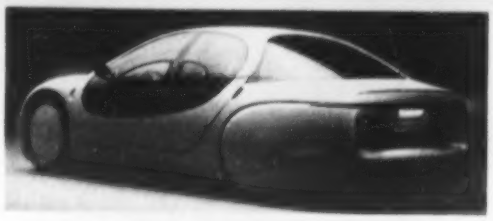
The UAW criticized the bonuses, reported last week by *The Oakland Press* of Pontiac, Mich. The newspaper said 80,000 of GM's 91,000 salaried workers received merit pay totaling about $80 miliion.

"I'm not sure where they're getting these numbers from," Maciarz said. But he confirmed that nonexecutive GM professionals recently had received merit pay.

Earlier this year, hourly employees were paid "performance bonuses" of about $1,000, roughly 3 percent of their 1991 earnings, Maciarz said. They also received the traditional $600 Christmas bonus, which was eliminated this year to the salaried work force.

UAW Vice President Stephen Yokich told the newspaper the bonuses didn't jibe with GM's restructuring.

"The sad fact is that the upper management side of the pain and suffering ledger at GM remains virtually blank, while apparently hourly workers are expected to make sacrifice after sacrifice," Yokich said.



Ultralite has a super-slippery drag of just 0.19, almost as low as a jet fighter's.

ULTRALITE
High-mileage car set for Detroit show

continued from PAGE 1

technical hurdles remain on GM's two-stroke engine and that carbon fiber composites remain prohibitively expensive, engineers on the project attempted to address many of the practical issues required for producing a vehicle of this type.

GM's design staff felt that for Ultralite to be a viable concept, it must be attractive as well as aerodynamically efficient. The concept car features a coefficient of drag of just 0.19. The very sleekest production sedans are clustered around 0.29. A jet fighter plane is about 0.16.

To illustrate the benefits of a low drag: It only takes 4.1 horsepower to overcome Ultralite's aerodynamic drag at 55 mph, compared to about 15 horsepower to push an Audi 100 at the same speed.

"The car had to look friendly, whatever the fuel economy," said Charles M. Jordan, GM vice president in charge of Design Staff. "The buyer has got to say, 'I want that.' Some of the cars I saw in Frankfurt and Tokyo were double ugly. Making a small car look good is like tailoring a dwarf."

Design Staff was in charge of the vehicle's exterior and interior. The body structure by Rutan's Scaled Composites Inc. is made of a carbon-fiber composite.

At the rear of the body, a removable tubular steel powertrain spaceframe contains the engine and transmission. This "power pod" bolts into the rear of the composite body structure.

The vehicle weight of 1,400 pounds dramatically undercuts current production cars. A Saturn SL1 sedan weighs 2,343 pounds, while a Toyota Tercel LE sedan weighs 2,085 pounds.

The GM vehicle's wheelbase is 110 inches. Overall length is 165.6 inches. It is 64 inches wide and 50.8 inches high. And it has 5.7 inches of ground clearance.

The display vehicle's power pod has GM's 1.5-liter, three-cylinder two-stroke engine. But engineers said they could also easily create a battery-powered pod for commuters in areas such as parts of Southern California that might require electric vehicles.

> "Some of the cars I saw in Frankfurt and Tokyo were double ugly. Making a small car look good is like tailoring a dwarf."
>
> **CHARLES M. JORDAN**
> GM DESIGN STAFF

The 1.5-liter engine uses a computer-controlled, air-assisted direct fuel injection system. It is fitted with an electrically heated catalyst to produce ultra-low emissions. Runkle said the engine can produce 111 brake horsepower at 5,000 rpm and 127 foot-pounds of torque at 4,000 rpm.

GM has even put the powertrain through the same federal test procedure required to pass EPA economy and emissions tests. GM claims the EPA numbers for the car are 45 mpg city and 81 highway. At a constant 50 mph, the car gets 100 mpg.

Fuel tank capacity is five gallons — not much in a normal car, but up to 500 miles worth in the Ultralite.

ACHIEVA
Hot new two-door bound for racetracks

continued from PAGE 10

many shorter, lower-speed tracks the series will be run on.

Currently an Oldsmobile exclusive, the heart of the SCX package is the W41 Quad 4 engine. With a special camshaft, an electronics upgrade and low-restriction dual exhaust, the engine makes 10 more horsepower than the "high-output" 180-hp Quad 4 that is available to the other divisions.

The engine also features "pull-ahead" design features that won't make it into the lesser Quad engines until later in the model year. Some of those features include a stiffening web cast into the outside face of the block to reduce engine shake. Other noise-attenuation tweaks include a "double-laminated" camshaft cover and front timing-chain cover.

Engineers say quieting the Quad has become a priority. But so far, it has defied the company's best efforts. Other design changes to quiet the engine are a stiffer air cleaner housing, a "quarter-wave" induction pipe tuner and an idle speed reduction to 700 rpm. One engineer admitted that the company had even experimented with an expensive balance-shaft system in order to reduce engine shake. But the gears used to drive the balance shafts had proved too noisy for production.

Additional SCX performance features include: unique 14x6.5-inch aluminum-alloy wheels, 215/60VR-14 tires, an electronically controlled shock damping system that operates according to driver commands or automatically, a 1.3-inch wider rear track, dual rear anti-sway bars and a shorter fifth gear ratio.

Ultralite's lack of weight posed special challenges

JACK KEEBLER
Staff Reporter

In a 1,400-pound car, four passengers could easily weigh more than half as much as the vehicle.

So developing a smooth-riding suspension for General Motors' Ultralite fuel-efficient concept car provided a special challenge.

Because the sprung weight of the vehicle varies greatly, steel springs were ruled out. Instead, GM engineers specified air springs with linear height sensors at all four corners.

An on-board computer individually controls each air spring for vehicle load leveling and an aerodynamically optimized ride height. The basic suspension system hardware for all four wheels is aluminum upper and lower control arms. The front axles sport a tubular anti-sway bar.

Other technical solutions:

- Although high-mpg vehicles are usually fitted with manual transmissions, Ultralite's two-stroke is mated to a Saturn Corp. four-speed automatic transaxle with a 4.00 final-drive ratio and a tall .480 fourth gear overdrive. The tall ratio ensures that even at highway speeds the engine is turning over slowly, to ensure maximum fuel economy.
- Braking is provided by aluminum composite discs with low-drag all-aluminum calipers. The design eliminates the need for electrical or vacuum assist and is backed up by GM's ABS VI anti-lock unit.
- The steering system is a manual rack-and-pinion type. The car rolls on 175/65R18 Goodyear low-rolling resistance tires mounted on forged aluminum wheels.

Ultralite is a GM team effort by the Technical Staffs Group, Advanced Engineering Staff, Design Staff, Research Labs, Inland Fisher Guide, Delco Products, Delco Electronics, and Saturn. Outside sources include Scaled Composites Inc., Goodyear Tire and Rubber Co. and PPG Industries Inc.

Olds offers buy-back deal

Oldsmobile will take the unusual step of offering to buy back new Achieva models from West Coast customers if they decide they'd rather buy a different car, even from a competitor, according to *Advertising Age*, a sister publication to *Automotive News*.

Under the program, a customer has up to 30 days or 1,500 miles to return the Achieva and buy another vehicle to qualify for his or her money back.

The offer will debut in West Coast TV ads beginning Jan. 13, *Advertising Age* said. The ads specifically mention competitors Toyota Camry and Honda Accord.

Monte Carlo confirmed

Chevrolet General Manager Jim Perkins confirmed the division's plans to reintroduce the Monte Carlo nameplate on a sleek, front-wheel-drive coupe in the next couple of years.

Automotive News reported in September 1990 that Chevrolet planned to reintroduce the Monte Carlo name — which debuted in the 1970 model year and left the lineup in the 1988 model year — on a Lumina-based coupe in 1993 or 1994.

Perkins left the timing in doubt, but the car is likely to appear in the 1994 model year when the Lumina is scheduled to be redesigned.

Air bags spawn few lawsuits

6 million cars, 60 cases; Big 3 may fight every one

HELEN KAHN
Senior Correspondent

Air bags are passing the American legal litmus test.

People aren't suing over them much, and they aren't complaining about them much.

Furthermore, the record for air bags is so good that car company lawyers may decide to defend all such suits instead of buying off marginal claims as they often do.

The Big 3 have some 6 million cars with air bags on the road, and they are defendants in only about 60 lawsuits. In contrast, more than 2,000 suits were filed against Ford Motor Co. over allegations that some automatic transmissions slipped from park into reverse. The complaints involved 20 million vehicles equipped with the Ford transmission.

Of more than 200,000 alleged safety defects called in to the safety hotline at the National Highway Traffic Safety Administration from 1985 to last Sept. 30, just 370 were about air bags. Since 1987, recalls have been announced to fix 10,543 air bags; in the same period, recalls have covered more than 4.7 million seat belts.

"If other car components were as reliable as air bags have proved to be, the companies' product-liability case load would be reduced almost tenfold," said Clarence Ditlow, director of the Center for Auto Safety.

"For example," said Ditlow, "if a tie rod fails in an air bagged car, and the air bag works, there is no injury, and no trial lawyer is going to waste time suing."

The NHTSA hotline counts complaints; it

Nuts and bolts displace show glitz

Showroom sheet metal dominates L.A. exhibits

KRISTINE STIVEN BREESE
Staff Reporter

LOS ANGELES — If the 1992 Greater Los Angeles Auto Show is any indication, automakers this year are taking a nuts-and-bolts approach to selling cars rather than wowing consumers and the media.

Detroit gets ready > 3

Production cars destined for the showrooms far outnumbered fancy concept vehicles at the California show, which opened to the public Saturday. Displays were low on glitz and heavy on sheet metal.

The unofficial theme during last week's press days might well have been: 1992 sales can't be any worse. Last's year's Los Angeles show, after all, was clouded by the looming Persian Gulf war. And the market failed to shine all year.

"All I can say about 1991 is, 'Ladies and Gentlemen, thank God it's over,' " declared Jim Perkins, general manager of Chevrolet. "Looking forward is a lot more fun than looking back these days."

In its display, Chevrolet offered a look forward to the 1994 model year with a close copy of the next Geo Prizm.

Los Angeles also marked the North American or world debut for other new products, ranging from the niche to the mainstream.

Big 3 prepare methanol cars for showrooms

JACK KEEBLER
Staff Reporter

Despite technical and marketing problems, the Big 3 automakers will forge ahead with plans to sell more than 8,500 methanol-powered sedans starting this year.

The Big 3's plans surpass the original goal of the California Energy Commission, which called for 5,600 flexible-fuel vehicles in public and private fleets by the end of 1992.

General Motors, Ford Motor Co. and Chrysler Corp. say they are more than willing to sell flexible-fuel vehicles — if they can find environmentally sensitive customers.

Methanol is a clean-burning liquid fuel made from natural gas. A flexible-fuel vehicle can run on any combination of up to 85 percent methanol and 15 percent gasoline, which is called M85. The EPA says vehicles running on the fuel produce about 50 percent less smog-forming emissions than gasoline.

Last week, Chrysler announced plans to sell 2,100 Dodge Spirit/Plymouth Acclaim models that will run on either pure gasoline or M85. Chrysler will begin the program with an initial delivery of 100 cars for government fleets in Washington and California. In July, a second wave will be offered to fleets and for retail sale to individual customers without any price premium over standard gasoline-powered sedans.

"Last May, we introduced our methanol concentra-

U.S. execs likely to reap concessions at summit

RICHARD JOHNSON
Staff Reporter

TOKYO — Several trade concessions are expected to be on the table this week when the chairmen of the Big 3 sit down with the heads of Japan's five biggest automakers at a historic summit meeting in Tokyo.

The eight, who together account for more than half of world auto production, are scheduled to meet Thursday afternoon at Tokyo's Hotel Okura in a bid to trim Japan's intractable auto-trade surplus with the United States. The Japanese makers are Toyota, Nissan, Honda, Mazda and Mitsubishi.

The meeting is unprecedented.

Although it is unclear what the actual summit will accomplish, Japan's government and its carmakers have been scrambling in recent weeks to ensure that President Bush and his entourage do not return to the United States empty-handed.

Bush, on the Australian leg of a 12-day Pacific swing that also takes him to Singapore, South Korea and Japan, warned last week that the United States expected "fair play" from Japan and more access to Japan's market.

"I want to see more jobs created in the United States . . . by concessions made, or by positions taken, in Japan," Bush said.

Although Bush is not ex-

Hyundai recalls subcompacts

FOUNTAIN VALLEY, Calif. — Hyundai Motor Co. is recalling about 895,000 Hyundai Excel and Mitsubishi Precis cars to fix a problem that could cause an engine fire.

The recall covers 1986 to 1989 model Excels, and 1987 to 1989 Precis, which are built by Hyundai.

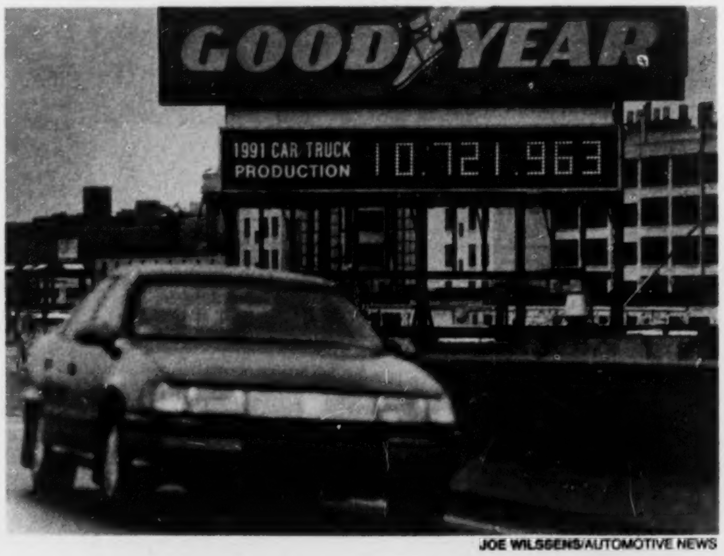
Hyundai said a defective reed valve subassembly could cause a malfunction in the secondary air supply system which would allow hot exhaust gasses to melt the plastic portion of the air filter and make an engine fire possible.

Buick Sceptre at Detroit show

DETROIT — Buick will display a rear-wheel-drive, mid-sized concept sedan called Sceptre at the North American International Auto Show.

The Sceptre, to be unveiled at a news conference tomorrow, is described as a personal luxury sedan. It is a five-passenger car powered by a 3.5-liter supercharged V-6 engine and an electronically controlled five-speed automatic transmission.

The car rides on a 111.8-inch wheelbase and develops 250 horsepower and 280 pounds-feet of torque. Sources at Buick indicated that the Sceptre may be an indication of the styling direction of the next-generation Buick Regal, which *is scheduled to debut in the* 1995 model year. However, the Regal is a front-wheel-drive car. — *Phil Frame*



JOE WILSSENS/AUTOMOTIVE NEWS

A sign at the intersection of I-75 and I-94 in Detroit gives the *Automotive News*-supplied estimate for 1991 calendar year production of light vehicles in the United States and Canada. The figure is the lowest since 1982.

'91 output down 9%; '92 starts slowly

ANNE E. WRIGHT
Chief Statistician

List of plant closings > 31

U.S. and Canadian car and truck production for the 1991 calendar year is estimated at 10,721,963, down 8.9 percent from 1990.

U.S. car production was shared by manufacturers as follows: General Motors, 44.0 percent; Ford Motor Co., 21.6 percent; Chrysler Corp., 9.4 percent; Honda of America Manufacturing Inc., 8.4 percent; New United Motor Manufacturing Inc., 3.6 percent; Toyota Motor Manufacturing U.S.A. Inc., 3.5 percent; Mazda Motor Manufacturing (USA) Corp., 3.1 percent; Diamond-Star Motors Corp., 2.8 percent; Nissan Motor Manufacturing Corp. U.S.A., 2.5 percent; and Subaru-Isuzu Automotive Inc., 1.1 percent.

Production for the 1992 calendar year began last Thursday on the same down note that ended 1991, with fewer vehicles produced and more plants idled.

Last week's estimated car and truck production in the United States and Canada was 54,108 for two days of production, at a daily build rate of 27,054. The year-ago week's assembly was 113,770 for three days of production at a daily build rate of 37,923. On a daily rate basis, the first week of production in 1992 was off 28.7 percent.

The Big 3 extended the holiday vacation at 29 plants. Ford tops the downtime list with eight trucks plants and seven car plants idled, GM shut five truck and four car plants and Chrysler closed three car and two truck facilities.

In the year-ago week, 23 plants were given an extended holiday vacation. ■

briefly

Honda buyer ties up phones

An angry car owner launched a telephone blitzkrieg on **American Honda's** toll-free information line in Torrance, Calif., and the phone company had to block all calls from a Massachusetts area code to get the lines working again. American Honda has sued Daniel Gregory in U.S. District Court in Boston, according to The Associated Press. The company said Gregory complained about the tires on his 1990 Honda CRX, but a dealer inspected them and found them normal. A Honda consumer affairs manager said Gregory then abused customer service employees by phone. A week later, Honda's toll-free, "Better Business Bureau Information Line" got "more than 100 harassing calls" in one day, Honda said. The next day, Gregory reportedly began calling a toll-free number used by dealers to reach American Honda's finance company. The company asked him to stop and sought help from police. The company said Gregory then tied up a fax number for four days.

GM WINS AT ROSE BOWL— UAW workers didn't let the fact that **General Motors** plans to close its Van Nuys, Calif., plant rain on their parade at the Rose Bowl. The UAW withdrew as co-sponsor of the GM Tournament of Roses Parade float several weeks ago when GM announced the plant closing. But so many auto workers showed up to work on the float that some were assigned to work on other floats. The GM float, "Looking to the Future," was honored as the parade's best.

BELATED BIRTHDAY — Complete with color slides, black and white photos and four pages of text, a Camaro 25th-birthday package arrived last week, courtesy of **Chevrolet** public relations. Just one problem: The Camaro went on sale Sept. 29, 1966, as a 1967 model, so the car's 25th birthday was more than three months ago. Another omission, but perhaps understandable: The material doesn't mention the fact that the Camaro was a delayed response to the **Ford** Mustang, which debuted April 17, 1964.

TIME FLIES — To encourage the development of clean-running electric cars, Germany will exempt them from vehicle taxes for five years. Most of the major automakers are working on such cars, but by the time they have something to sell, little of the five years will be left.

A GREEN BENZ, PLEASE — Naturalis, a trendy department store in Palm Beach, Fla., claims to sell "the world's finest recycled, recyclable and environmentally safe products." Among the merchandise on display is a 1992 **Mercedes-Benz** S-class sedan. Mercedes-Benz says the car is made of practically 100 percent recyclable materials. It features a chlorofluorocarbon-free air conditioning system, water-based paint, an asbestos-free brake system and plastic parts marked for easy sorting and recycling. But has anybody looked at its fuel-economy numbers?

Mercedes-Benz S-class: sensibly chic for the Palm Beach set.

Fleet buyers sticking with the Big 3

CHARLES M. THOMAS
Staff Reporter

Even though Japanese manufacturers have made small dents in American corporate fleet sales, fleet managers say they will purchase virtually all of their vehicles from domestic automakers this year.

General Motors will account for 40.6 percent of all new fleet sales, Ford Motor Co. will account for 33.9 percent and Chrysler Corp. for 23.4 percent, while imports will account for a scant 2.1 percent of fleet sales, according to a survey by the National Association of Fleet Administrators.

"Fleet managers have long been great supporters of domestic manufacturers," said Gordon West, association president. "The Big 3 counts on fleet managers to purchase at least 25 percent of their new model year vehicles. In tough economic times such as these, and with global competition a reality, it is difficult to ignore the importance of steady fleet sales."

For years the fleet market was virtually ignored by Japanese manufacturers because they never had enough volume to sell into it, particularly in the early 1980s, when Japanese makers operated under a voluntary restraint agreement.

That changed when Japanese makers began producing vehicles in the United States. Now they can meet most of fleet managers' criteria, including on-time delivery, acquisition pricing and a large enough dealer base to deliver almost anywhere.

But they still have to overcome a "buy American" preference from fleet mangers.

Fleet sales will continue to be strong through 1992 as 99 percent of the 562 survey respondents continue to provide vehicles for their sales and service personnel rather than changing to employee-owned vehicles.

Fifteen percent of the respondents said they will increase the number of vehicles in their fleets during the year. Each respondent manages an average of 1,194 vehicles.

Fleet managers will order safer cars in 1992. The survey revealed that two out of three U.S. companies will order vehicles with air bags. And three out of five companies will include vehicles with anti-lock brakes in their fleet.

The federal government is prodding fleet managers to purchase safer cars. The Occupational Safety and Health Administration is expected to announce regulations this month which may require employers to adopt safety belt policies and provide safety education to everyone who drives company cars on business.

Twenty-nine percent of corporate respondents buy only vehicles with air bags, according to the survey. An additional 29 percent order air bags when available; 6 percent permit the driver to select the option.

In addition, 11 percent of public utility fleets and 20 percent of law enforcement and government fleets order air bags.

According to the survey, 14 percent of corporate fleet managers only order vehicles with ABS, only 4 percent of public utility fleets mandate ABS, and 11 percent of law enforcement and government fleet managers only order vehicles with ABS.

Twenty-nine percent of both corporate and public utility fleets order ABS as an option when available. However, 45 percent of law enforcement and government fleets order ABS as an option when available.

Initial cost was cited by fleet managers as the most important factor when selecting vehicles, followed by job suitability and the country where the vehicle was built.

Cellular telephones are gaining in popularity. Fifty-one percent of all survey respondents provide cellular phones in their fleet vehicles.

More than 25 percent of survey respondents indicated they plan to acquire alternative-fuel vehicles for their fleets. Fifty-eight percent said compressed natural gas vehicles are their top choice. AN

Saturn unveils '93 wagon

LINDSAY CHAPPELL
and KRISTINE STIVEN BREESE
Staff Reporters

Saturn will expand its product line later this year with a compact station wagon targeted primarily at California buyers.

The Spring Hill, Tenn., automaker also has revealed the possibility that it may introduce a minivan to the fledgling line.

Donald Hudler, Saturn vice president of sales, service and marketing, said California-dominated consumer studies confirmed a strong demand for both a wagon and a van, but the company decided to develop the wagon first.

"This is what we could do next with product expansion without over-taxing this relatively small company," Hudler said at the Los Angeles auto show. "It doesn't mean no van; it only means no van in 1993."

Hudler said the General Motors unit expects the wagon to comprise one-tenth of its 1993 model year sales, meaning as many as 24,000 units.

The company said the new model was specifically designed for California sales, although it will be marketed nationwide.

As Saturn originally predicted, California has become the line's biggest market, representing 12 percent of total sales. Import brands hold almost half of California car sales, and Saturn has staked much of its reputation on reclaiming domestic sales there.

He cited the new wagon's "sporty" appearance as representing a California-influenced design, although the car was developed in Saturn's Troy, Mich., technical center.

1993 Saturn station wagon is based on sedan, has the same 1.9-liter engine.

He said that consumer surveys focused on California taste preferences in developing the car, which begins production in August. About 75 percent of the development clinics and focus groups were conducted in California.

The car will contain a rear seat as in some large wagons. Hudler hinted that the format would make Saturn a low-priced alternative to Honda Motor Co.'s Accord wagon.

The wagon prototype has the same dimensions as the existing Saturn sedan, but could end up being slightly taller. Like the sedan, the wagon will offer two trim packages. AN

Saving GM plant is biggest issue in Mich., Texas towns

PHIL FRAME
Staff Reporter

The most popular bumper sticker in Arlington, Texas, these days reads: "Keep GM — The Heartbeat of Arlington."

Mayor Richard Greene passed out the stickers last week on one of his now-frequent visits to the General Motors assembly plant.

The Arlington plant is competing with a plant near Ypsilanti, Mich., over which one will stay open after GM completes its retrenchment in the United States and Canada.

The Arlington and Ypsilanti plants both make large rear-wheel-drive cars, which have been selling poorly, leaving the plants operating at barely half capacity.

GM said one of the plants will close as part of a restructuring that will require the closing of 10 assembly plants, four powertrain plants and 11 components plants by 1995. The closings will cost 60,000 blue-collar and 20,000 white-collar jobs.

While GM's announcement left virtually every plant city wondering about its fate, concern is strongest in Arlington and Ypsilanti because one of the two plants definitely will be closed.

UAW Local 276 in Arlington responded immediately by voting to allow four-day work weeks of 10 hours per day, if necessary. That schedule enables GM to boost the capacity of a plant without having to pay workers overtime.

Members of Local 1776 in Ypsilanti say they won't offer concessions until GM asks. But they will talk about how much better their plant is and how much cheaper it is to build a car in Ypsilanti.

In Arlington last week, the city council hired a consultant to update a several-year-old report on the economic impact that the GM plant has on the city and the state.

The council also agreed in principle to grant GM a tax abatement should the company decide to expand the plant if it consolidates production of the Chevrolet Caprice, Buick Roadmaster, Cadillac Brougham and Oldsmobile Custom Cruiser wagon in Arlington.

"Those are all the things we can do. We would do more if we could," said Mayor Greene, who is a co-owner of Vandergriff Chevrolet-Buick Co. in Arlington. "We're not trying to sponsor a bidding war, but it's very difficult for us not to respond in a way that would ensure the plant's future."

The Arlington plant is the city's largest private employer and largest taxpayer — supplying $3.7 million a year in city, school and county taxes.

Ypsilanti-area officials are scheduled to meet today to consider a package of incentives similar to Arlington's. AN

Mid-Dec. sales match '90

Truck gain offsets decline for cars

JIM HENRY
Staff Reporter

NEW YORK — Light-truck sales improved slightly in mid-December and almost offset a decline in car sales.

Sales of new vehicles totaled 270,175, which was only 2,131 units or 0.8 percent below last year. Car sales fell 2.3 percent to 172,447, while light-truck sales, including minivans, rose 2.0 percent to 97,728.

There were nine selling days in mid-December this year and last.

Ford Motor Co., American Honda Motor Co. Inc., and Toyota Motor Sales U.S.A. Inc. reported higher 10-day sales this year.

Ford and Chevrolet are fighting it out again for bragging rights for the nation's best-selling, full-sized pickup, this time for the calendar year. Ford claimed its pickups outsold Chevrolet's for the 1991 model year, and Chevrolet later disputed that claim.

Ford Division reported mid-December sales of all light trucks jumped 17.6 percent to 30,091. Chevrolet said its light-truck sales fell 13.9 percent to 21,990 for the 10 days.

"It is close, but the final report isn't due until Monday (today)" said Chevrolet spokesman J. David Hudgens. Through Dec. 10, Ford's F series led Chevrolet's C/K line by 12,247.

Ford and Chevrolet both declined to predict full-year pickup sales. Each company disputes how the other counts its sales, so the final tally might not end the argument.

"I wouldn't be surprised if we had another 'Miracle in Dearborn,' but we sell real cars to real people," Hudgens said, sarcastically referring to Ford's statistics.

For the 10 days, Ford Motor Co. said it sold 62,077 cars and light trucks — a 5.5 percent improvement, even though car sales were off 3.8 percent.

General Motors sales slipped 4.9 percent to 91,447. Buick continued to shine, with its sales up 9.5 percent. Cadillac, which had been on a roll since the introduction of 1992 models, dropped 15.5 percent. GMC Trucks climbed 8.8 percent.

Chrysler Corp. sales were off 7.2 percent to 31,590, despite a 1.4 percent improvement in light trucks and minivans. *Automotive News* estimates Chrysler's sales.

Two of the three biggest Japanese companies posted substantially higher mid-month sales.

American Honda shot up 32.3 percent. Honda sales were up 32.7 percent, and the Acura Division improved 30.9 percent.

Acura offered dealer incentives of $2,500 on 1991 Legend sedans and $3,000 on Legend coupes. Through Dec. 31, Honda dealers received $500 on all 1991 models except the CRX.

Toyota Motor Sales also turned in a strong mid-month performance, with sales 17.0 percent above the year-ago period.

Lexus sales rocketed 64.8 percent, helped by the division's two new coupes and its new ES300 sedan.

GM-Holden's has launched a new Series II of its Statesman/Caprice model in Australia with refinements such as anti-lock brakes and an optional automatic ride-leveling system.

GM revamps big Australian sedans

SYDNEY, Australia — General Motors-Holden's Automotive Ltd., GM's Australian unit, has launched a new series of its Statesman/Caprice model in a bid to erode Ford's dominance of the country's big-sedan segment.

Ford's long-wheelbase sedans traditionally have outsold Holden's by 3-to-1 in the segment, but GM says its new Series II cars are mounting a serious challenge to that lead.

GM said it expects to sell about 2,280 units in the upscale segment this year, compared with expected sales of 3,850 for Ford's Fairlane/LTD series.

Priced from the equivalent of $31,300 to $46,800, the new Holden's cars are refinements of the existing range. Mechanical improvements include anti-lock brakes as standard equipment on Caprice and optional on Statesman; independent rear suspension; speed-sensitive steering; and an optional automatic ride-leveling system.

With an eye on the fleet market, Holden's has introduced an optional 3.8-liter V-6 engine for the Statesman, which previously had been sold only with a 5.0-liter V-8.

Ultralite features tagged for GM production cars

WILLIAM R. DIEM
Assistant Managing Editor

DETROIT — General Motors expects to see several features of its 100 mpg Ultralite concept car in production on regular car lines.

Some of the ideas are so good, "I'm a little sorry to see them out here" exposed to competitors, said the car's chief designer, Jim Bieck.

Features aimed at production include the 1.5-liter two-stroke engine, low rolling resistance tires, and the material that symbolizes the Ultralite, carbon fiber.

At its introduction to reporters Friday, the Ultralite was cast as a technological laboratory, not a potential production car. Much of the weight savings comes from using carbon fiber for the body, and GM expects to translate some lessons into other projects, like the electric car under development for the mid-1990s that is based on the company's Impact concept car.

Don Runkle, GM's advanced engineering vice president, said carbon fiber will be designed into vehicles in areas where incredible stiffness is required.

But carbon fiber will come slowly because of its cost. The raw material is $40 a pound, and the Ultralite uses 420 pounds.

Other features of the car could appear quickly.

"The two-stroke engine will be in the product plan of the future," said Runkle. The fuel-injected one in the Ultralite is 1.5 liters, has three cylinders, and should yield a top speed of over 100 mph.

The 18-inch Goodyear tires, or similar ones, will also show up on streets, likely on the electric car derived from the Impact.

The lightweight seats in the Ultralite could show up next in GM's APV family because they could be easily removed and moved. He indicated that the Impact-based electric car might use such seats, which stretch see-through webbing over composite carbon fiber frames that are strong enough to anchor the seat-belt mechanism.

GM is casting its Ultralite concept car as a technological laboratory.

Most of the Ultralite's instruments are reflected in a mirror set far forward under the sloping windshield in an arrangement GM calls virtual image display, which could show up in production.

Other items that could end up in production cars include the sideways muffler used as an underbody aero wing, and air outlets formed in the visor over the speedometer, where it is close to the driver but out of the way.

Stempel opens World Congress

DETROIT — General Motors Chairman Robert Stempel, just back from a trip to Japan with President Bush, will kick off the 1992 Automotive News World Congress with a dinner speech Sunday, Jan. 12, at the Westin Hotel in Detroit.

Stempel's speech, "2020 Vision: What the Next 30 Years Hold for the Auto Industry," will be followed by the second keynoter, Stanley Gault, chairman and chief executive officer of Goodyear Tire and Rubber Co. Gault's topic is: "The Pursuit of Certainties in An Uncertain World."

Stempel's speech will be his first major North American public appearance since he announced a dramatic series of plant closings and other cost cuts on Dec. 18.

A pair of speakers will highlight each of the three evenings of the World Congress. Over three days, 25 prominent speakers will address automotive topics at the World Congress at the Westin.

Stempel

Tickets are still available for the Tuesday night gala dinner, featuring legendary automotive entrepreneur Roger Penske, president of Penske Corp., and Gerald Hirshberg, vice president of Nissan Design International Inc.

The Monday night speakers are Allan Gilmour, president of the Ford Automotive Group at Ford Motor Co., and Paolo Cantarella, president and chief executive officer of Fiat Auto S.p.A.

For information, call Wendy Barydt at (313) 764-5592.

Air bag recalls

May 1987 — 283 units, 1986 and 1987 Mercedes-Benz 190, 260E, 300 and 560 models; electrical connection may disconnect, and bag may not deploy.

August 1987 — 230 units, 1987 Mercedes-Benz 300, 420 and 560 models; generator did not ignite at low temperatures.

February 1989 — 1,883 units, 1987 and 1988 Volvo 780 series; replace electronic control systems.

February 1990 — 857 units, Buick Reatta; reversed wires in impact sensor may delay deployment.

April 1990 — 2,543 units, 1990 Toyota Celica; incorrect machining of inflator unit.

April 1990 — 257 units, Chrysler Corp. models with gray interiors; machining problem with inflators made by Morton Thiokol.

October 1990 — 4,490 units, various TRW customers, to replace bags with cross-threaded parts that could fail.

Among the callbacks, Ford recalled 167,247 vehicles searching for 3,056 faulty bags; GM recalled 2,166 vehicles to find 1,224 units; Honda recalled 44 vehicles seeking 47 units; and Mazda recalled 2,708 vehicles to find three units. GM and Honda had kept better records. Some of the Hondas with faulty bags had not been distributed.

— Helen Kahn

AIR BAGS

6 million cars, only 60 lawsuits

continued from PAGE 1

doesn't try to judge them. It took calls of 225 alleged failures to deploy; 49 burn complaints; 35 reports of oversensitive deployment; 18 complaints of "violent" deployment and 43 other complaints. The Big 3 were named in 68 percent of the complaints about air bags.

Of the 225 non-deployment reports, 155 persons claimed injuries. On average, the injuries were minor: Two-thirds of victims sought no medical attention, and of three persons who spent a night at a hospital, two stays were deemed unnecessary.

Experience with air bags has already led to improvements and expertise. Companies are now warning drivers about slouching or leaning forward and about unbelted occupants and out-of-position children.

Early complaints of burns from escaping gases have resulted in running engineering changes: General Motors and Chrysler Corp. redirected venting of hot nitrogen oxide away from occupants, and Chrysler added a tether to control the geometry of the unfolding bag.

A look at the eight lawsuits filed against Ford suggests some so-called nuisance suits — suits that are so vague as to be difficult and time-consuming to disprove but that might be closed with only a little money.

But although it may be cheaper and quicker to settle most of them than to find out what really happened, Ford may fight all the way to establish its own belief in the air bag's safety — especially in view of its record with 5,000 cars in a government fleet — say Ford legal sources.

One suit against Ford blames air bag failure for a fatality. Ford has not yet answered that case in court, but company lawyers believe the driver air bag deployed as designed in the accident, which involved massive front-end damage in a high-speed collision with a full-sized truck.

The other seven contain allegations of injury. They involve seven separate accidents in seven different 1990-model cars.

Chrysler so far has the most cases: 30 to 40. Chrysler made air bags standard in 16 car lines for the 1990 model year, giving it the highest percentage of cars with air bags on the road. The suits are bunched among models built before May 1990, when running engineering changes were made to vent hot gases and add the tether.

Ken Gluckman, a lawyer in charge of Chrysler litigation involving air bags, says the number of car rental units in its cases is disproportionately high, suggesting that some plaintiffs may be people who waived collision damage coverage and later had an accident. He said they may be suing to recover the cost of repairing their uninsured rental cars, which would include the cost of replacing air bag systems.

Gluckman said Chrysler is not playing that game. The company insists that its bags deployed properly, that the injuries were minor and short-lived and that it will defend the cases involving air bags.

GM has fewer than 10 lawsuits, almost all of them alleging failure to deploy. Only minor injuries have occurred, and GM insists the air bags worked properly in all the accidents. While GM lawyers did not offer specifics on any suits, they emphasized that air bags offer protection in frontal crashes only and are designed to supplement, not replace, seat belts.

At least two air bag cases involving imported cars have been settled out of court.

- A Pennsylvania out-of-court and private settlement involved an unexpected deployment of an air bag in a leased 1988 BMW because of an electrical short in an actuation circuit in the steering column.
- A Massachusetts out-of-court settlement for $6,000 involved a 1990 Acura Legend hitting a stopped car and underriding the bumper with no deployment of the air bag.

Widow's suit seeks $21 million

HELEN KAHN
Senior Correspondent

The most serious case involving air bags filed against Ford Motor Co. is one by a New York widow who says an air bag failed to save her husband's life. She is seeking $21 million from Ford and TRW.

Ford disputes the charge and says that air bags aren't able to protect drivers in all crashes. In this case, the crash was so severe that the head of driver David H. Litman was pinned between the steering wheel and head rest. It took rescue workers a half hour to get him out.

The widow, Haviva Litman, also sued the drunk driver of the 1979 Chevrolet Suburban for an equal amount in punitive damages. The van hit the 1990 Continental on Aug. 17, 1990, and left it with massive front-end damage. The suit was filed in March 1991 in Nassau County Supreme Court.

The suit charges that although the air bag was made and sold as a safety device, it failed to operate properly and neither TRW, Ford's supplier, nor Ford, the assembler, warned of possible danger.

It seeks recompense because of the two companies' alleged negligence and because the air bag did not save David Litman. All aspects of design, material, testing, construction and assembly are addressed as faulty.

Ford's engineers inspected the Continental and found that it suffered massive front-end damage as a result of a severe high-speed collision with a larger, heavier vehicle and that the driver's air bag deployed as designed.

The Ford spokesman said no restraint system can protect all occupants in all collisions, especially in accidents as severe as this one.

Air bags proved OK in federal service

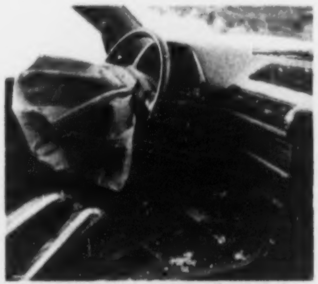
HELEN KAHN
Senior Correspondent

Two programs using air bags undertaken by the National Highway Traffic Safety Administration in 1983 and 1984 have been called "very positive" experiences.

One involved 5,300 Ford Tempos with driver-side air bags that were driven by government employees. The Defense Department used 300, and NHTSA and the federal fleet shared 5,000. The program provided Ford Motor Co. with a wealth of hands-on experience.

In the other government program, 539 police cars were retrofitted with air bags.

The National Center for Statistics and Analysis says the air bags "performed well in service, mitigating injuries." It reported that as of Jan. 1, 1987, (when the Tempos had racked up some 123 million miles and the retrofitted police cars had logged 52 million miles) "no known cases in which the air bags failed to deploy as designed and only one non-crash deployment."



Government programs found air bags "performed well in service."

That incident, which had no negative consequences, involved a police car retrofit in which the readiness indicator light on the instrument panel gave "adequate warning of a fault in the electrical system, but no action was taken."

In 100 crashes in which air bags deployed, there were either no or minor injuries. Six persons suffered moderate injuries; the most severe (at a velocity change of about 25 mph) produced a mild concussion. In all crashes in which the bags did not deploy, they were not supposed to — with one exception involving a Tempo which crashed into a heavy truck at a closing speed of about 95 mph.

The experts said: "This crash was so severe that the vehicle's electrical system was destroyed before the crash sensors could trigger the air bag. The driver was fatally injured and could not have been protected by the air bag."

A private fleet has had similar experience.

Government Employees Insurance Co. has operated an 800-car air-bagged fleet for its employees for five years. Ed Utley, company president, has reported three successful deployments and no failures to deploy.

FUELS

Methanol cars debut this year

continued from PAGE 1

tion smart sensor, making possible the production of true flexible fuel vehicles that will be totally transparent to the owner," said Francois Castaing, Chrysler vehicle engineering vice president. "Now I'm proud to tell you we are putting our money where our mouth is and will, unlike some competitors, offer these environmentally friendly vehicles with no price premium."

Chevrolet announced in November that it could build up to 4,000 Lumina models that operate on the M85 fuel blend. Ford has said that later this year it plans to offer up to 2,500 Taurus sedans that operate on M85.

Like domestic car companies, import makers have been providing methanol-powered test vehicles to the California Air Resources Board and the EPA.

Mercedes-Benz of North America plans to deliver six flexible-fuel 300SE models to the California Energy Commission later this year and produce 9,000 for sale in California in 1994.

Mazda Motor Corp., Mitsubishi Motor Corp., Nissan North America Inc., Toyota Motor Corp., Volkswagen United States Inc. and Volvo Cars of North America have all unveiled small numbers of flexible-fuel models for federal and state government testing and demonstration fleets.

Ryuhei Narita, senior vice president of Nissan Research and Development, expressed concern about the ability of any carmaker to market flexible-fuel vehicles when he unveiled the company's experimental flexible-fuel NX 1600 coupe last March. Nissan plans to place 16 coupes with the California Energy Commission.

Narita said that although car buyers express concern for the environment, finding serious customers for flexible-fuel cars was "giving us nightmares."

Carmakers have expressed concern about the size of the market for vehicles that cost more than proven gasoline-powered models, burn a more expensive fuel and have a shorter range.

Car buyers must also balance the scarcity of M85 pumps in their buying decision. Although methanol is less expensive than gasoline, its lower calorie count yields fewer miles per gallon than gasoline. The EPA estimates that total energy costs for miles driven are comparable for gasoline and M85.

So despite California legislation, 1990 Clean Air Act provisions that require "clean-fuels" fleets, and even cash incentives of up to $2,000 per vehicle, makers are still worried that buyers may not seek out methanol-fueled cars. And carmakers are just starting to sort out what the true cost of the vehicles will be to consumers.

"There are already ethanol- and methanol-powered cars on the road, but Ford doesn't publish their true cost," said Anne Nazareth, a Ford governmental affairs associate.

"Most of the fleets out there are test fleets or demonstration fleets. They are money-losing propositions for us, leased or sold below cost, to help us gain some on-road experience," she said.

Chevrolet announced in early November that it would be the first automaker to offer an alternative-fuel vehicle to retail customers. Customers can now order flexible-fuel Lumina models for delivery beginning in April. The flexible-fuel Luminas are federally certified and will operate in California with an experimental permit from the California Air Resources Board.

Ford has announced plans to produce 2,500 1993 flexible-fuel Taurus sedans for delivery primarily to California starting in November 1992.

Carmakers are reluctant to discuss the additional cost of the more sophisticated control electronics, stainless steel fuel lines and tanks, and new lubricants required by the methanol fuels.

A year ago, Volkswagen displayed its methanol-powered Jetta at the North American International Auto Show in Detroit. At that time Volkswagen officials said that in mass production, the Jetta with the flexible fuel system was expected to cost approximately $300 more than a comparable gasoline-powered Jetta.

Staff reporter Jim Henry in New York contributed to this report.

Ford finds buyers like flex-fuel for the other guy

JIM HENRY
Staff Reporter

NEW YORK — Despite mandates by California regulatory agencies and ambitious sales goals by the Big 3, flexible-fuel cars remain a marketing challenge.

Automakers are still uncertain how many car buyers who profess to be politically and socially correct will actually pay several thousand dollars extra for a less-polluting car with a limited range and a power source that might not be available everywhere.

Ford Motor Co. says it found consumer reluctance when it polled 2,500 people in a nationwide phone survey last fall.

"The answers vary considerably between, 'Should *somebody* buy one?' and, 'Would *you* buy one?' " said Anne Nazareth, a Ford governmental affairs associate. "The answer seems to be, 'Somebody should buy one, but not me.' "

Everyone is well-meaning about the environment, said Bill Cregan, North American alternate-fuel vehicles program manager for Ford.

And several Ford officials agreed that today's environmental awareness seems to be here to stay.

But people start falling off the bandwagon when you tell them what it may cost, Cregan said.

Ford uses the survey to support its position that the federal government will have to subsidize low-emissions or no-emissions cars, or nobody will buy them.

In the phone survey, "a majority" said they would make "some kind of sacrifice" to help the environment. Only about one-third said they would be willing to make "a large sacrifice," Cregan said.

Price, technical shortcomings and the perceived benefit affected willingness to pay, he said.

Ford created a hypothetical vehicle for the survey. The hypothetical vehicle outperformed any low-emissions vehicles on the road today, but people still were not willing to buy it, Cregan said.

For instance, few people said they would buy a car that reduced emissions 20 percent. They would rather car-pool or use more conventional methods, Cregan said.

If a car that reduced emissions 40 percent was available, about 10 percent of the respondents said they would buy it, even if it cost $500 to $600 extra.

But when people were told the fuel for the hypothetical vehicle might be available at only one out of 10 gas stations — which might be expected in a new industry — the number willing to buy dropped to about 2 percent of the total.

Industry lobbyists complain that emissions from new cars already have been reduced about 93 percent and that new federal standards will cut emissions only another percentage point or so.

Federal emissions standards for 1996-98 could add $1,100 to the cost of the average gasoline-powered vehicle, Ford said. And the added cost for California-standard cars could be twice that.

So Ford concludes from its survey that only a miniscule minority, certainly less than 2 percent of the population, would be willing to pay for low-emissions cars — much less electric vehicles, which are even more expensive than ethanol and methanol vehicles.

Volvo, Audi kick off new wave of rebates

ARLENA SAWYERS
Staff Reporter

incentive
WATCH

Volvo Cars of North America last week added 1992 models to its incentive lineup and extended its previous program on 1991 models.

Audi of America is wooing its dealer body with cash incentives on vehicles purchased from port stock.

Through March 31, **Volvo** factory-to-dealer rebates on 1992 cars are: 240 series, $500 to $1,000; 740 series, $1,000 to $1,500; and 940 series, $1,500.

The dealer rebates on 1991 Volvos, which were to expire Dec. 31, were extended until March 31.

Audi is paying $1,000 to $1,500 to dealers who purchase specified 1991 cars from its port stock. The payment is $1,500 on the 100 series and 200 series and $1,000 on the 90 series.

Rolls-Royce Motor Cars Inc., which paid the luxury tax on 1991 Rolls-Royces and Bentleys purchased by its customers, discontinued the program Dec. 31. "It is unlikely" that the luxury car company will reinstitute the program in the near future, a spokesman said.

Incentive programs for several other importers expired last week and had not been renewed last Friday.

The companies are: Alfa Romeo Distributors of North America; American Honda Motor Co. Inc. (Honda and Acura divisions); American Isuzu Motors Inc.; Mazda Motor of America Inc.; Mitsubishi Motor Sales of America Inc.; Nissan Motor Corp. in U.S.A. (Nissan Division); Subaru of America Inc.; and Toyota Motor Sales U.S.A. Inc. (Toyota Division).

Among the cars that will be unveiled at the Motor City's auto show is the 1993 Chrysler New Yorker, which goes into production in February 1993.

Detroit show's hot models

Called the Geo Concept, this four-door sedan really is a look at the 1994 Prizm.

JOE WILSSENS/AUTOMOTIVE NEWS

Workers in Detroit's Cobo Center put the finishing touches on the display for Nissan's 1993 minivan, called the Quest.

The Corvette Sting Ray III concept features dramatically angled headlamps and a longer wheelbase.

Chevrolet unveils next Geo Prizm

RICK KRANZ
Staff Reporter

DETROIT — Chevrolet will unveil two concept vehicles at the Detroit auto show that indicate the styling direction of the next generation Geo Prizm and what might be in store for Corvette buffs.

Called Geo Concept, this aerodymanic four-door sedan owes its heritage to the redesigned 1993 Toyota Corolla, which goes on sale this fall in the United States. The redesigned Prizm will bow later as a 1994 model.

The Geo Concept has all-new sheet metal and aerodynamic refinements that integrate the doors into the roof headers. The hood line is steeply sloped.

Chevrolet says the concept vehicle uses many one-piece body panels in order to improve fit and finish.

Safety highlights include a driver-side air bag and anti-lock brakes. Power comes from a 1.6-liter multi-port fuel-injected four-cylinder engine.

The Corvette Sting Ray III concept car features dramatically angled headlights and pedals that move with a memory for preset positions.

The car was created at General Motors' Advanced Concept Center in California.

The Sting Ray III's wheelbase is 103 inches, nearly seven inches longer that the production Corvette, while the overall length is two inches shorter.

A coil-over-shock front suspension design replaces the transverse leaf springs. The gearbox is positioned between the rear wheels for better weight distribution. AN

LA

This year's car show is heavy on functional

continued from PAGE 1

On the more functional side, Nissan and Ford showed their 1993 jointly developed minivans, the Nissan Quest and Mercury Villager.

Isuzu introduced its new flagship, an all-new Trooper sport-utility. Saturn displayed its third model, a 1993 wagon. (See story on Page 4.) And Infiniti showed its J30, a new six-cylinder sedan that will compete in the low $30,000 range.

There were also some new offerings in the highly competitive sports coupe segments. The third-generation Mazda RX-7 and convertible versions of Nissan's 240SX and 300ZX were shown. And Ford displayed its 1993 model-year replacement for the Probe.

Appropriately for smog-plagued Los Angeles — and the times — almost every executive's presentation mentioned efforts in the areas of alternative-fuel vehicles, electric vehicles, fuel economy and recyclability. BMW chose Los Angeles for the world debut of its E2, an electric car prototype designed for America.

Chrysler said it plans to offer 2,100 Dodge Spirit/Plymouth Acclaim models that will run on either gasoline or M85. The program will begin this year with government fleets in Washington and California, and expand in July to include individual buyers.

WAITING FOR LH

Conspicuous by its absence — if only temporarily — was Chrysler's hope for the future — its 1993 LH sedans. But they will arrive at the Los Angeles show on Wednesday, when they will be introduced simultaneously at Detroit's auto show. Chrysler did use Los Angeles for the first public showing of a 1992 entry, the 8.0-liter, V-10 Dodge Viper.

"I'm optimistic about what we're doing" in 1992, said Francois Castaing, Chrysler's vice president of vehicle engineering. "But there are still many things out of our control. We can get the Viper out on time, the LHs out on time, but we can't control public policy, the economy or consumer confidence.

He added: "Lower interest rates, if they are passed along to consumers, might help. But a middle-class tax cut, and even the interest rate cut won't help what's making people cautious today — a fear that they're going to lose their jobs."

Other show highlights:

- Ferrari chose one of its best markets to unveil the Testarossa replacement, the 512tr. The 5.9-liter, 12-cylinder car will cost an estimated $190,000. It went on sale last week.
- Audi's Quattro Spyder concept car, which stole the Frankfurt show in canary yellow guise last fall, was painted green for its Los Angeles showing. Audi says it chose green to help emphasize that the car is both fun to drive and easy on the environment because of its light weight, among other things. Although speculation is rife that Audi is going to put the car into production and sell it in the United States, a spokesman said that decision hasn't been made.
- Cadillac introduced the 1993 Allante with the new 32-valve, 290-horsepower, Northstar V-8 engine. It's the first Cadillac to go from 0 to 60 mph in less than seven seconds.
- BMW of North America Inc. executives suggested that the company plans to bring a version of the E2 electric car to California before 1993, when it would be expected to offer a zero-emissions vehicle to meet California's clean air rules. Los Angeles also marked the world debut of BMW's 318i sedan.

FEW NEW CONCEPTS

The show's concept cars were mostly repeats from previous shows, such as the Ford Contour, Chrysler 300 and Mercedes-Benz C112.

Subaru of America spotlighted its Amadeus, a 250-hp, four-wheel-steering sport wagon based on the SVX platform. Chris Wackman, Subaru's vice president of marketing, said parent Fuji Heavy Industries had mated the SVX to a "most-traditional" Subaru vehicle: the all-wheel-drive station wagon.

Like most executives, Wackman expressed more bullishness over his company's prospects than the market in general.

He termed the recent drop in interest rates a double-edged sword. While they might trickle-down to help consumers looking for auto financing, "they might also be keeping people out of the market," he said. "If you're in the midst of refinancing your home, you're not going to want a lot of new credit — like a car — on your records." AN

What a week

As never before, the world focused on Tokyo and Detroit last week.

The U.S. Big 3 chairmen grimly met with the Japanese Big Five in Tokyo, then unhappily returned from a disappointing, even humiliating, trip with President Bush.

At the huge North American International Auto Show in Detroit, American executives of Japanese companies could barely get in a word about products as reporters pressed them on trade.

Automotive News Asia Editor Richard Johnson and Tokyo Bureau Chief Mary Ann Maskery, both based in Tokyo, covered the trip.
Pages 1, 42, 44

Two dozen *Automotive News* reporters and editors, based in Detroit, Los Angeles and Washington, covered the dozens of cars and hundreds of executives converging on Detroit.
Pages 1, 2, 3, 6, 8, 9

Japan torpedoes Big 3 hopes

U.S. executives criticized for high salaries, perks

RICHARD JOHNSON and MARY ANN MASKERY

TOKYO — Despite their apparent unyielding approach at last week's auto-trade summit here, Japanese carmakers realize they are under pressure to put a comprehensive program on the table to slash their auto-trade surplus with the United States, according to analysts and industry executives here.

According to these observers, executives of Japan's Big 5 are preparing to field demands that they lower exports to the United States when they next meet their American counterparts — possibly as early as next month in Detroit.

Tokyo
WELCOMES
BIG
3

"If there is going to be a big gathering, we have to take something to the table. We can't go (to Detroit) to simply chat," one Honda official noted on background.

The Big 3 chief executives — sorely disappointed with the outcome of last week's unprecedented meeting with Japan's Big 5 — sought a commitment from the Japanese industry to wipe out Japan's $41-billion trade surplus with the United States over five years.

About two-thirds of the surplus represents trade in autos and parts. Including transplant production, Japanese makers command about 29 percent of the U.S. market. The Big 3, on sales of about 16,000 units, hold a scant 0.2 percent share of the Japanese market.

To their evident surprise, however, the

Gault: Changes create challenges

JACK KEEBLER
Staff Reporter

DETROIT — Rapid change at all levels in the auto industry can be seen as a reason for doubt and defeat or can create challenges that lead to opportunity and success, according to Stanley Gault, chairman and chief executive officer of Goodyear Tire and Rubber Co.

In remarks prepared for the Sunday night opening session of the 1992 Automotive News World Congress last night, Gault also acknowledged the staggering challenges the auto industry will confront this year.

Among those he included the economic interdependence of nations, pursuit of low production costs, global concern for the environment by both customers and governments, ever higher consumer expectations, the difficulty of building trust in vital partnerships and cost containment.

Gault was scheduled to share Sunday night speaking honors with General Motors Chairman

'91 sales are lowest in 8 years

JOSEPH BOHN
Staff Reporter

Wars, rumors of wars, economic recession and a total lack of consumer confidence in 1991 dropped U.S. car and light-truck sales to their lowest point in eight years. Japanese makers continued to take market share from the Big 3 and European importers.

The sales year started on a low note, with the nation at war in the Persian Gulf. But the expected upturn didn't occur after the fighting ended. For the auto industry, it was that kind of year from start to finish. Little, if anything, went right.

Total light-vehicle sales of 12,335,726 were off 11.2 percent from 1990's 13,836,918.

It was a particularly grim year for the Big 3, which captured 70.5 percent of the market, a loss of 1.1 percentage points from 1990. Big 3 sales of 8,694,592 vehicles were off 12.6 percent from 1990.

Chrysler Corp. dropped from third to fifth place in car sales. American Honda Motor Co. Inc. was third, Toyota Motor Sales U.S.A. Inc. was fourth.

General Motors' 35.0 percent share of U.S. light-vehicle sales

Fewer delegates, parties at NADA

CHARLES M. THOMAS
Staff Reporter

A sputtering economy will take its toll on the National Automobile Dealers Association Convention and Exposition in Dallas Feb. 8-11. Pre-registration for the 75th annual conference is down 15 percent from last year, and the number of exhibitors is down slightly.

Moreover, some automakers have canceled dealer receptions, will send fewer executives to Dallas, and are cutting expenses in other ways.

Traditionally, General Motors divisions have held separate parties for dealers. But this year they will be consolidated into one huge reception.

"GM car and truck divisions, and GMAC will hold one reception for all dealers at this year's convention," said a company spokesman. "In the past, individual divisions hosted parties over a three-day period, but the decision was mutually agreed on by GM and its divisions to host one reception."

He cited the difficult business year as one reason for hosting only one reception and said there should be a substantial saving.

GM announced last month that it will reduce its work force by nearly 80,000 people in the United States and Canada and shut 21 assembly and parts plants by 1995.

"GM has so many dual dealerships that multiple overlapping receptions make less sense than holding one party," the spokesman said. "It will make it easier for dealers and executives to meet."

Oldsmobile was the first division to notify dealers that its annual party has been canceled because of the ailing economy and

corrections

- Montreal Auto Auction Ltd. President Michael Lawrence notes that his auctions act strictly as agents between buyers and sellers. A Dec. 23 article inaccurately indicated the auctions buy vehicles.
- A Jan. 6 article should have said that Saturn's 1993 station wagon will not have three rows of seats.
- The drawing of the Chrysler New Yorker in the Jan. 6 issue was identified by Chrysler Corp. as a 1993 model. The car is planned for the 1994 model year.
- The Geo Prizm is scheduled to be replaced in the 1993 model year. A Jan. 6 story said 1994.

JIM DUNNE/POPULAR MECHANICS

Cadillac grooms new Brougham

A spy photographer caught Cadillac engineers testing this prototype, believed to be the redesigned 1993 Brougham. Expected in the spring of 1993, the new Brougham will have a 115.9-inch wheelbase and measure 216 inches overall, about five inches shorter than the current Brougham. It is a kissing cousin to the Chevrolet Caprice and Buick Roadmaster, with which it shares its frame, windshield, cowl, 5.7-liter V-8 engine and automatic transmission.

latenews

Dems' trade bill still on track

LIVONIA, Mich. — President Bush's trip to Japan hasn't changed the plans of Congressional Democrats to introduce a trade bill that would require the Japanese to reduce their trade surplus with the United States by 20 percent a year or face limits on car sales in this country.

That bill will be introduced in about two or three weeks, with hearings scheduled immediately after introduction, House Majority Leader Richard Gephardt, D-Mo., said Friday while touring a Ford transmission plant here.

Of Bush's agreements with Japanese leaders, Gephardt said: "I didn't expect much and we didn't get much. Promises are no substitute for action, and in this case even the promises aren't worth much.

"The only way to get action is to continuously put pressure on the Japanese."

— Max Gates

Lawyers quit wiper inventor

DETROIT — The inventor of intermittent windshield wipers used in millions of vehicles worldwide is winning his court battles with the automakers, but he has lost his lawyers.

Attorneys from the Washington law firm of Reed, Smith, Shaw & McClay successfully argued the case against Chrysler Corp. last month for Robert Kearns, but they said they dropped him because he hasn't paid them $900,000 in legal expenses. Kearns said he has hired a new firm and hopes to win his 18 suits.

Kearns won $10.2 million from Ford Motor Co. in 1990, but he said he has only $1.2 million left. He said Reed, Smith went over budget.

Kearns is seeking $36 million in damages from Chrysler and a 12-year contract to supply intermittent wipers to the company. A hearing to determine a settlement is set for April.

— The Associated Press

Right-drive due for Ford Probe

DETROIT — Ford Motor Co. will offer Probes with right-hand steering for export to the United Kingdom and Japan beginning next year. The Probes will be built at the Mazda plant in Flat Rock, Mich., which has assembled Probes for Ford since 1988.

Allan Gilmour, president of the Ford Automotive Group, said, "The United Kingdom and Japan are attractive markets, so we are enhancing the export potential of this new model by offering a right-hand-drive version."

Gilmour did not say how many right-hand-drive Probes will be exported to the two countries. Ford spokeswoman Judith Muhlberg said the company has exported 8,700 Probes to Japan since 1988; she said Ford has never exported the Probe to the United Kingdom.

The Probes will be the first right-hand-drive Fords produced since the early 1900s.

Ford expects U.K. sales gain

DETROIT — Ford of Europe expects a 10 percent increase in sales this year in the United Kingdom, Ford's core market in Europe. Sales there "were a disaster" last year, said William Fike, Ford of Europe president.

Ford sold 386,000 vehicles in Britain last year, down from 507,000 in 1990.

Fike bases his optimism on 1992 being an election year in the United Kingdom. "The people in power will continue to incentivize the economy," he said. "I think we have reached the bottom."

Total industry sales of 1,592,000 vehicles in the United Kingdom last year were down 20 percent from 1990.

Isuzu increases parts warranty

CITY OF INDUSTRY, Calif. — American Isuzu Motors Inc. has increased the warranty on repair parts to 1 year/12,000 miles from three months/4,000 miles. The change was effective Jan. 1.

Basic warranty coverage on 1992 Isuzu vehicles is 3 years/50,000 miles with a 5-year/60,000-mile limited powertrain warranty and 6-year/100,000-mile rust-through warranty.

VW electric cars hit Bavaria road

FRANKFURT — Volkswagen AG said last week it will lease 20 of its Citystromer electric cars to the state of Bavaria in the first two-year test of the vehicles on public roads.

Although VW has already sold 60 of the Golf II-based cars to corporations, none are driven on public roads, the company said. All are being used in warehouses and areas where normal pollution emitting vehicles could not be driven, said a spokesman.

The electric Golfs are "more or less prototypes" and cost about $46,000 apiece, VW said.

The price is too high to consider selling the vehicle to the general public, but VW said it hopes the test will show that the vehicles stack up in real driving as a viable alternative to fossil-fuel cars.

— Diana T. Kurylko.

GM, Chrysler ratings lowered

DETROIT — The credit ratings of General Motors and Chrysler Corp. were lowered last week by major rating services.

Lower credit ratings can make it more expensive to borrow money.

Moody's Investors Service Inc. dropped its opinion a notch on debt issued by GM and its finance arm.

Standard & Poors Corp., the other major credit rater, lowered its opinion of Chrysler and its financing subsidiary.

GM, with an A2 rating from Moody's, is still in the blue-chip investment-grade category. But Chrysler fell further in the speculative, or junk bond, class with a Standard & Poors rating of single B-minus.

Moody's retained its top-flight rating of commercial paper issued by General Motors Acceptance Corp. and GM Hughes Electronics.

— The Associated Press

briefly

Olds rejects merger, death

Oldsmobile General Manager J. Michael Losh doesn't think too much of analysts and reporters who suggest that his division should be merged with another **General Motors** division or eliminated. In fact, he doesn't think too much about division consolidations. "What did **Ford** get out of consolidating **Lincoln-Mercury?**" he asked. "It got a second-class citizen in two different markets. What has **Chrysler** gotten out of its divisional consolidation?"

WARM WELCOME — "I sure hope they do well," said one **Toyota** executive as he viewed **Chrysler Corp.'s** new LH sedans at the Detroit auto show. "It will take some of the pressure off us." Toyota has become a target for trade protectionists.

LOOKING FOR A HANDOUT — GM is always looking for ways to save money. Monday, the company tried to get media passes to the auto show for 50 employees.

TEN IN A ROW — For the 10th straight year, the **Ford** F-series pickup was America's best-selling vehicle. Ford products accounted for five of the top 10 selling vehicles in 1991. More calendar year sales figures are on Pages 28 and 30.

TOP 10 SELLERS, CALENDAR YEAR 1991

	Sales
1. Ford F-series pickup	442,311
2. Chevrolet C/K pickup	426,507
3. Honda Accord	399,297
4. Ford Taurus	299,659
5. Toyota Camry	263,818
6. Chevrolet Cavalier	259,385
7. Ford Explorer	250,059
8. Ford Escort	247,864
9. Ford Ranger	233,503
10. Chev. Corsica/Beretta	231,227

MAKING SCENTS — The art of developing a car has reached an odorous height, says Gerald Hirshberg, vice president of **Nissan** Design International. Nissan developed its new **Infiniti** J30 sedan with a nose toward pleasing customers' nasal passages. "We'll sniff a cross-section of leather, for example," Hirshberg says. "It's not a science by any means, but there is an art to it."

WHILE THE CAT'S AWAY — While the Big 3 auto leaders were in Japan, someone pulled a fast one. Ground support vehicles at their hometown Detroit auto show wear **Toyota** badges.

HITCHHIKER — The new government attitude allowing cooperation among the Big 3 has some practical benefits. On the way to Japan, **Ford's** Harold Poling hitched a ride from Detroit to L.A. on **GM's** corporate jet with Robert Stempel.

CAFE FRANCOIS — Shortly before a **Chrysler-Plymouth** press conference at the Detroit auto show, Chrysler Vice President Francois Castaing was spotted borrowing a cup of coffee from **Oldsmobile's** stand. "Things must be tougher at Chrysler than we realized," quipped one auto writer. Deadpanned Castaing, who was about to unveil Chrysler's LH cars: "Every penny went into the hardware."

Castaing: Coffee's on Olds.

Mexico sales fall again in October

MEXICO CITY — Sales of cars and trucks in Mexico fell for the second straight month in October.

The declines have taken some steam from a market that had been running 21.8 percent above year-ago levels through August, according to the latest figures from the Mexican Automotive Industry Association. With October's 4.3 percent decline and an 8.25 percent dip the previous month, sales were 16.0 percent above year-ago levels after 10 months.

Volkswagen, the industry leader, remains well ahead of last year's sales pace despite a flat October. Its Beetle continues to lead the market, with 72,391 sales through October, a 3.7 percent increase. Beetle sales are up 4.2 percent for the year.

Other makers reported slight to moderate gains for the month with the exception of Nissan, which dropped nearly 40 percent.

Nissan's relatively flat year combined with strong gains by the U.S. Big 3's Mexican subsidiaries has tightened the sales standings in Mexico. After 10 months, just under 12,000 sales separate No. 2 Nissan from No. 5 Chrysler. In October 1990, Nissan led each of the U.S. brands by more than 20,000 units.

While car and truck sales from Mexico's "Big Five" automakers fell, sales from exclusive truck makers, led by Mercedes-Benz Mexico, rose 9.8 percent.

Mexican sales figures reported by *Automotive News* do not include tractors and buses.

MEXICAN VEHICLE SALES

	Oct. 1991	Oct. 1990	10 mos. 1991	10 mos. 1990

Missouri dealer group to police advertising

JACK BERNSTEIN
Special Correspondent

JEFFERSON CITY, Mo. — The Missouri Automobile Dealers Association has announced a crackdown on deceptive and misleading advertising.

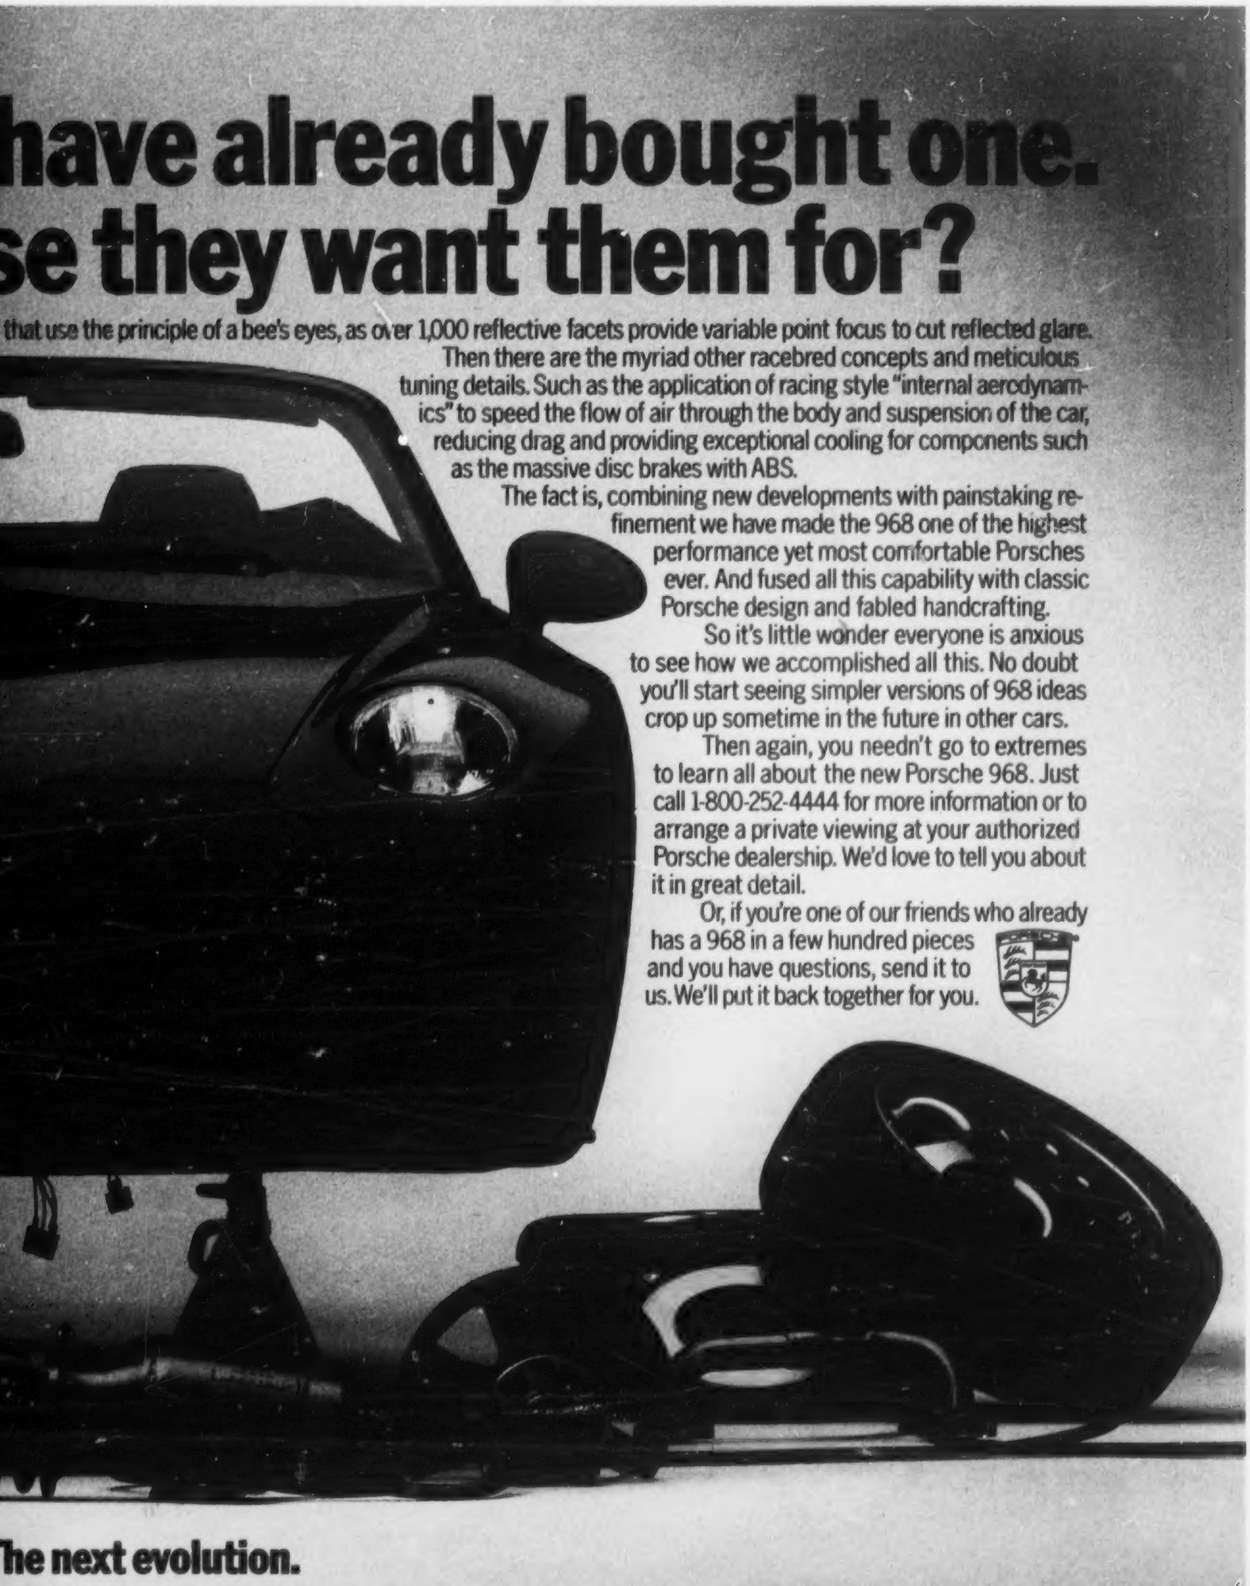
The association has adopted vehicle advertising standards and has asked the state's dealers "to check voluntarily" print, radio and TV ads. The dealer group says it plans to screen dealer ads in various newspapers to spot violations.

If it finds any violations, the group will write the dealer a letter asking for cooperation and suggesting how to change the ads to comply with the group's standards.

"We are going to do our best to eliminate bad ads," says the group. "MADA is going to do this until we can get enforcement from the state by either a law or rule."

Missouri Automobile Dealers Association's Vehicle Advertising Standards include the following:

- All terms of sale shall be fully disclosed, clearly and conspicuously. Any material conditions or limitations that apply shall be prominently disclosed.
- No product or credit term that is not available shall be advertised. Terms such as "write your own deal and name your price," shall not be used.
- Any illustrations or displayed vehicles shall be the same model and equipment as the ad copy.
- Use of the terms "factory, manufacturer, factory authorized sale, factory outlet," etc., shall not be used in relation to dealership ownership or a sales event.
- Use of the world "free" shall not be used if a product or service must be purchased.
- Any advertised product must be available on the stated terms from inventory, or by order with delivery within a reasonable period of time.
- Any credit sale or lease must conspicuously disclose: amount of downpayment or pre-payment; terms of repayment; annual percentage rate; other fees or costs, if any; total deferred payment price or total of lease payments; terms of lease-end "purchase option," if any; lease-end customer liabilities, if any. Leases must be stated as such.
- The use of superlatives (such as "We guarantee to sell for less," etc.) shall not be used, unless they are used factually. Terms such as "everyone financed" and "no credit rejected," shall not be used.
- When a price is advertised it shall be delivered at that price, except for applicable taxes.
- If the vehicle advertised is not new or unused, it shall be classified by terms that clearly describe previous use (such as demonstrator, rental, dealership rental, factory demonstrators, fleet repurchase, lemon law repurchase, etc.) along with year, make and model, and odometer reading.
- Where a discount or savings is featured, it shall be calculated from the suggested retail price.
- No annual percentage rate shall be offered that necessitates a "buy down" if there is a cost involved in securing the lower rate.
- Terms such as "factory invoice" or "cost" shall not be used unless the delivered price is stated.
- "Wholesale," "fleet" or "dealer's cost" shall not be used in defining prices or a sale unless it is actual net cost. Sale prices must be honored for 10 days after sale ends.
- Consumer rebates/coupons issued by the dealership or advertising group shall not be used unless the full amount of the rebate/coupon is funded by the manufacturer or ad group.
- Price equaling (matching or bettering competitors' prices) should fully disclose any conditions which apply and specify what evidence a consumer must present. Such evidence should not place an unreasonable burden on the consumer.
- Where a warranty, guarantee, extended service plan or service discount is advertised, all terms shall be clearly stated. All demonstrators and used vehicles shall



have already bought one.
se they want them for?

that use the principle of a bee's eyes, as over 1,000 reflective facets provide variable point focus to cut reflected glare.

Then there are the myriad other racebred concepts and meticulous tuning details. Such as the application of racing style "internal aerodynamics" to speed the flow of air through the body and suspension of the car, reducing drag and providing exceptional cooling for components such as the massive disc brakes with ABS.

The fact is, combining new developments with painstaking refinement we have made the 968 one of the highest performance yet most comfortable Porsches ever. And fused all this capability with classic Porsche design and fabled handcrafting.

So it's little wonder everyone is anxious to see how we accomplished all this. No doubt you'll start seeing simpler versions of 968 ideas crop up sometime in the future in other cars.

Then again, you needn't go to extremes to learn all about the new Porsche 968. Just call 1-800-252-4444 for more information or to arrange a private viewing at your authorized Porsche dealership. We'd love to tell you about it in great detail.

Or, if you're one of our friends who already has a 968 in a few hundred pieces and you have questions, send it to us. We'll put it back together for you.

The next evolution.

SALES
12.3 million total is lowest in 8 years

continued from PAGE 1

was its smallest since the 1920s, when it began offering cars in colors other than black.

European cars, particularly upper-end luxury models, got clobbered. Toyota's Lexus outsold both BMW and Mercedes-Benz for the first time.

Peugeot and Sterling withdrew from the market and Yugo landed on the endangered species list with a scant 3,092 sales.

Sales of European vehicles totaled 347,329 units, off 26.0 percent. Market share shrank to a scant 2.8 percent.

The Japanese makes, including transplants, incurred a 4.6 percent drop on sales of 3,176,175 vehicles, but they increased their market share by 1.7 percentage points to 25.7 percent.

Overall new-car sales in the United States were 8,176,310, off 12.0 percent from 9,295,841 in 1990.

The Big 3 captured 64.2 percent of the new-car market, down 1.6 percentage points from 1990. The Japanese captured 30.2 percent of the car market, and the Europeans had 4.1 percent.

Honda Accord continued to be the best-selling car line, and Toyota Camry moved into the No. 3 spot behind Ford Taurus.

Light-truck sales in the United States were 4,159,416, down 9.4 percent from 1990.

GM's share dips, but Buick shines

PHIL FRAME
Staff Reporter

The punch-drunk heavyweight champion of car companies, General Motors, reeled as its U.S. vehicle sales fell 12.5 percent for the 1991 calendar year.

GM was staggered by a lingering recession, war, ever-stronger competition and multi-billion-dollar losses. Its share of the U.S. car and truck market dropped to 35.0 percent, the lowest in recent years. The previous low was 35.1 percent in 1987 and 1989. The 1991 share was a half point worse than the 1990 share of 35.5 percent.

But the General's sales glimmered slightly near the end of 1991, with its nine new car models picking up steam.

The company had few moments to savor in 1991, but Buick clearly was one bright spot. Aside from Saturn, which debuted late in 1990, Buick was the only Big 3 make to register an increase in sales in 1991. Buick led the industry in car market share increase, rising from 5.8 percent to 6.7.

The old Century sedan and wagon became the division's No. 1 seller, with volume up 15 percent. The Regal had a 16 percent increase in sales.

The division's performance was even more noteworthy considering that two of its highest-volume cars — LeSabre and Skylark — underwent lengthy model changeovers.

The addition of the Roadmaster sedan and wagon during 1991 (only 5,000 wagons and no sedans were sold in 1990) probably saved the division from a decline last year. Buick dealers sold 39,136 Roadmasters in 1991. Park Avenue sales were up one-third.

Saturn Corp. had nowhere to go but up in 1991, and it sold 74,493 cars. Some observers think that is not significant for a company started with a $3.5 billion investment. But without Saturn, GM's U.S. vehicle market share would have dropped below 35 percent, which would have added coal to critics' fire.

The dark side of GM's 1991 U.S. sales was at Chevrolet/Geo, Pontiac, Oldsmobile, GMC Truck and Cadillac.

Chevrolet/Geo again sold the most cars in the country, widening its margin over Ford, but Chevrolet/Geo lost half a point of U.S. car market share in the process. In trucks, Chevrolet lost ground to Ford. In 1991, Chevrolet lost 1.4 points of market share, while Ford lost 0.3 points.

Without a car to pick up the slack for high-volume models in changeover, Pontiac's sales fell like a boulder. Car sales dropped below 500,000, and car-market share fell nearly a full point.

Grand Am remained Pontiac's leading seller despite a 29 percent volume drop, attributable to changeover to an all-new 1992 model. Bonneville, the other all-new model, managed a 5.7 percent sales gain despite nearly three months of plant downtime.

Oldsmobile sales declined 14.8 percent last year. The old Cutlass Ciera, which managed a 1.7 percent sales gain, was its best seller.

Eighty Eight Royale sales were down 17.1 percent for the year, but sales picked up dramatically when the all-new 1992 model was introduced.

Oldsmobile sold nearly 54 percent fewer of the high-volume Cutlass Calais compacts, which were discontinued in the spring. The Achieva replacements were delayed three months because of late styling changes. Those circumstances cost Oldsmobile more than 55,000 units last year.

Bright spots for GMC Truck included Safari (down only 3.5 percent), Rally (up 20 percent) and S-15 pickup (down just 3.8 percent). Bad news came from V-Jimmy (down 50 percent, mainly for changeover to the C/K-based Yukon) and Suburban (down 35 percent, mainly for change from the R/V to the C/K platform).

Cadillac had nothing but bad news for most of the year. No model sold better in 1991 than in 1990, while Japanese makers ate Cadillac's lunch. Acclaimed redesigns of the Seville and Eldorado sold like hotcakes late in the year, but were far too late to make a difference in the annual total.

Cadillac ended 1991 with 17 percent fewer sales than in 1990.

Car losses swamp Ford truck gains

KATHY JACKSON
Staff Reporter

Half of the top 10 vehicle sellers in the United States last year wore Ford Motor Co. nameplates. But even that did not save the No. 2 carmaker from suffering a 13.6 percent slide in total vehicle sales. For the year, Ford sold 2,867,191 cars and trucks, 449,905 fewer vehicles than 1990.

Of that total, 1,635,870 were cars, down 15.8 percent from a year ago; truck sales dipped 10.4 percent to 1,231,321.

Total market share slipped to 23.2 percent, down from 23.9 percent at the end of last year.

There was some good news. The one real bright spot was the Ford Explorer. Introduced in March 1990, sales of the compact sport-utility zoomed 37.6 percent to 250,059 units, and Explorer muscled its way into the No. 7 spot on the top 10 vehicle selling list, the first time a sport-utility has been a top 10 seller.

Ford's F-series pickup truck remained the best selling vehicle in the United States, edging Chevrolet's C/K pickup by 25,804 units.

Declining car sales hurt Ford the most. Ford had three cars on the top 10 list, the Taurus, Escort and Tempo, but its car market share fell to 20 percent of the market, down from 20.9 percent last year and 22.3 percent in 1989.

Of the domestic cars, only the Mercury Sable reported a sales increase, selling 3,528 more units than the 96,803 cars that were delivered in 1990. Sales of Mercury's imported cars, the Tracer and Capri, also rose.

But every car produced by Ford Division reported sales declines, led by the redesigned Crown Victoria. Introduced in March as a 1992 model, the Crown Victoria's sales plunged an embarrassing 39.4 percent, the worst decline among Ford Division cars. Contributing to the drop was the automaker's decision to delay sales to police and taxi fleets until this calendar year.

Ford Division's poor showing allowed Chevrolet to take bragging rights as the best car seller in the nation for the second year in a row. Chevrolet last year outsold Ford Division by 79,946 units, compared with a Chevrolet margin of 42,947 during 1989.

Ford Division's strong truck sales enabled the division to remain the No. 1 vehicle seller in the nation. Ford's truck share slipped slightly to 29.6 percent, down from 29.9 percent last year.

Strong December truck sales, in particular, helped Ford beat Chevrolet by 162,974 truck units, compared with a 130,488 Ford margin in 1990.

Ford Division's vehicle margin over Chevrolet narrowed slightly. Ford Division sold 83,028 more cars and trucks than Chevrolet, compared with 87,541 last year.

Mercury reported the best showing among Ford nameplates, down 3.8 percent across the board. Sales of the redesigned Grand Marquis, counterpart to the Crown Victoria, were off 7 percent.

Lincoln cars were off 22.9 percent, with the soon-to-be-replaced Mark VII — off 53.8 percent — the worst of any car in Ford's stable.

Minivans pull Chrysler in '91

MARY CONNELLY
Staff Reporter

Chrysler Corp. in the 1991 calendar year tried to walk on one strong leg — its minivan sales.

It was a year when the company saw the Jeep Cherokee's once-proud dominance of the four-door sport-utility segment erode under the onslaught of the Ford Explorer.

And for the first time, Chrysler slipped to fifth place in U.S. car sales — behind American Honda Motor Co. Inc. and Toyota Motor Sales U.S.A. Inc. Chrysler still outpaced its Japanese competitors in overall vehicle sales.

"The year was pretty dismal for the entire industry," said Chrysler President Robert Lutz. "I think 1992 will be a little better than

"I COULDN'T EXPLOIT CAR AND TRUCK MARKETS WITHOUT IT."
That's what they're saying about
The World Vehicle Market Strategic Review and Forecast Databook.

Just published by industry experts Euromotor Reports, it forecasts sales volumes, scrappage rates and vehicle parcs in detail for both cars and trucks in 42 countries in 5-year increments to 2010. Fifteen regional forecasts bring total country coverage to 172.

Researchers Ludvigsen Associates and Max Pemberton developed the authoritative **Databook** forecast from data extending back to 1960, also shown in detail. Ratios of GDP/capita and ownership density are only a few of the 12 planning parameters shown, analysed and interpreted with practical recommendations.

The new **Forecast Databook** from Euromotor Reports is the essential master global reference and forecast for all planners, strategists and tacticians acting in and selling to the world motor industry.

EUROMOTOR™
REPORTS

1991, but it's unlikely that 1992 will be a whole lot better."

Lutz said the company expects the industry to rebound slightly, "perhaps as early as late spring."

Such a turnaround will translate rather quickly into profitability for Chrysler, Lutz said. "Our cost-reduction effort was so good and our cash management so much improved that we don't really need much of an upturn in order to be profitable," he said last week.

Chrysler would probably like to forget 1991 and focus on the critical vehicle launches coming in 1992. First out of the gate is the 1993 Jeep Grand Cherokee, which will be the company's new contender against the formidable Explorer. Chrysler needs the new Jeep, which goes into production this week. Explorer sales in 1991 reached 250,059 units — far outpacing Cherokee's 1991 sales of 121,461 units.

Chrysler will try to regain its stature in the sport-utility market by marketing both the current Cherokee and the Grand Cherokee this year.

But the company's only strong performance in 1991 — minivan sales — will be further threatened in 1992. Despite an overall drop of 3.8 percent in truck sales for the year, Chrysler managed to post increases in both Plymouth Voyager and Dodge Caravan minivan sales. U.S. Caravan sales rose 6.47 percent to 207,919 units and Voyager sales climbed 1.08 percent to 173,373 units in 1991.

Chrysler said that its North American minivan sales, including units sold in Canada, made 1991 its second best minivan sales year since the models were introduced in 1983.

But in 1992 Chrysler's minivans will face fresh competition from the Mercury Villager and the Nissan Quest. Both go into production in April and will be made at a Ford Motor Co. plant in Avon Lake, Ohio.

Chrysler's biggest story in 1992 will be the introduction of its 1993 mid-sized sedans — the Dodge Intrepid, Chrysler Concorde and Eagle Vision — which had been code-named LH. Some analysts view the sedans as do-or-die vehicles when determining Chrysler's future as a carmaker. If Chrysler stumbles on LH, some suggest the company will become a more narrowly focused manufacturer of minivans and sport-utilities.

Chrysler's need for the vehicles is apparent in its 1991 sales results.

For the first time, Chrysler trailed Honda and Toyota in car sales as the U.S. automaker's car sales fell 18.4 percent to 702,518 units. Chrysler held 8.6 percent of the U.S. car market in 1991, down from 9.3 percent in 1990. In contrast, Honda captured 9.8 percent of the U.S. car market in 1991 with 803,367 car sales. Toyota sold 742,021 cars to gain 9.1 percent of the U.S. car market last year.

Chrysler's top-selling car in 1991 was the Dodge Dynasty. Chrysler sold 105,651 Dynasty units last year, a drop of 2.6 percent from 1990.

Dodge Shadow eked out a 5.2 percent sales increase in 1991, but sales of its sibling, the Plymouth Sundance, fell 17.9 percent. Shadow sales were boosted by the sale of 18,382 Shadow convertibles, bringing total sales of the subcompact to 77,191 units for the year.

The Dodge Dakota was the bright spot in Chrysler's light-truck sales. Dakota sales rose 10.06 percent in 1991 to 82,336 units.

While Jeep and Eagle's share of the total U.S. car and truck market remained unchanged in 1991, Plymouth and the Chrysler brand lost share. Dodge increased its share of the total vehicle market to 6.3 percent in 1991 from 6.0 percent in 1990, although Dodge car and truck sales dropped 6.6 percent in 1991 from a year earlier.

Even Asian sales fall in rough '91

KRISTINE STIVEN BREESE

Staff Reporter

If there was any question that 1991 was a bad year for the auto industry, consider that sales of supposedly bulletproof Asian nameplates fell 5.03 percent.

Sales of the 12 Japanese makes fell 4.6 percent, and sales of Korean Hyundai models fell 14.4 percent. Japanese companies sold nearly 3.2 million cars and light trucks, down from 3.3 million in 1990. Hyundai sold 117,630 units, down from 137,448, its third straight year of declining sales.

In spite of the drop, the Asians scored some significant successes. The Honda Accord was the best-selling car in the United States for the third consecutive year. Toyota and Lexus, the two nameplates of Toyota Motor Sales U.S.A. Inc., again combined to top 1 million car and truck sales. That had looked less than sure at midyear, when sales totaled 478,014.

Nissan Division sales fell 8.2 percent, but that was good compared to the first half, when Nissan was 15.0 percent behind its 1990 pace.

The Asians gained a collective 1.7 percentage points of market share. They ended 1991 with 26.7 percent of the total market: 25.7 percent for the Japanese and 1.0 percent for Hyundai.

ASIA

Sales fall in rough 1991

continued from PAGE 27

The brightest spot was in the luxury segment, where Acura, Lexus and Infiniti saw increases in sales and market share. That was due in large part to new models. Acura added the Vigor and restyled the Legend. Lexus replaced the ES250 with the ES300 and added the SC400. Infiniti's G20 was on sale only three months in 1990 and all of 1991.

With help from the new Diamante luxury sedan and its Expo sport wagons, Mitsubishi rebounded from a slow first half to beat its 1990 sales total by 71 units.

Like the luxury makes, Mitsubishi was able to boost both sales and market share. Suzuki did the same.

Suzuki's sales were up 5.6 percent. Growth came from truck sales, helped by a new four-door Sidekick.

Six of the 13 Asian nameplates had a drop in sales but a rise in market share. They included the four biggest players — Toyota, Honda, Nissan and Mazda — as well as Subaru and Isuzu.

Some analysts have suggested that the sales slowdown could be a blessing in disguise for the Japanese, whose success could be politically costly in a recession.

John Casesa, auto analyst with Wertheim Schroeder & Co., says fear of protectionism is the "biggest concern of the Japanese today."

Increased output from North American transplants could help on that score. Among Asian makers with North American plants, all but Isuzu sold fewer imported vehicles in 1991 than they did a year earlier.

Sales charts compiled by Karen Detkowski

Recession batters European brands

DAVID VERSICAL
National Editor

No matter how you cut it, 1991 was an ugly year for European importers.

Some examples of the carnage:

- Every company, from Alfa Romeo to Yugo, lost sales.
- Two firms, Peugeot and Sterling, quit the U.S. market.
- Volkswagen, once the kingpin of U.S. importers, recorded fewer than 100,000 sales for the first time since 1958. Its sibling division Audi lost sales for the sixth straight year, plunging 41.8 percent to 12,283.

In all, last year the Europeans sold 347,329 cars and trucks in the United States, down 122,083 from 1990. That's a 26.0 percent decline — more than twice as steep as the overall market's.

The recession can be blamed for much of the drop, compounded for the Europeans by the new U.S. luxury tax. The 10 percent levy on the amount of a car's price above $30,000 took effect at the start of 1991. The tax hit the Europeans harder than anyone else after they were helped by a beat-the-tax spree in late 1990. Pricey makes such as Porsche and Jaguar, for example, were each off by about 50 percent last year.

"We knew we were in for a soft year," said Dieter Laxy, executive vice president for Porsche AG, at the North American International Auto Show in Detroit. "Unemployment and the fear of unemployment" have reduced consumer confidence, he said. He quoted Porsche President Arno Bohn as saying, "You have to be in the right mood to buy a Porsche."

Competition from expanding Acura, Lexus and Infiniti lines also surely robbed some sales. But those three Japanese makes shared nearly 24,000 additional sales among them last year — far less than the Europeans lost. Other Japanese competition came from the new Mitsubishi Diamante and a revamped Mazda 929.

With nine volume firms off by more than 20 percent each, the Europeans had little room for bright spots in 1991. But there were some. Saab used a combination of lease and loan deals to keep sales nearly stable. Its sales were down 1.1 percent. Alfa Romeo was the only other European make to beat the market. Despite slipping in the second half, Alfa's sales at year-end were down just four units from year-ago levels. ■

McCurry's view: Look in the mirror, stop blaming Japan

KRISTINE STIVEN BREESE
Staff Reporter

DETROIT — Toyota's U.S. sales boss says the Big 3 should stop blaming the Japanese for their problems.

"I sympathize with what this industry is going through. But it's not Toyota's fault," said Robert McCurry, executive vice president of Toyota Motor Sales U.S.A. Inc.

Like other Japanese import executives at last week's North American International Auto Show, McCurry spent much of his time discussing trade issues instead of automobiles. And in his typically blunt fashion, the U.S. head of Japan's No. 1 carmaker addressed the issue head-on.

American business and government leaders should look in the mirror instead of blaming the Japanese, he said.

In particular, he suggested the revival of an investment tax credit and a revision of antitrust laws to allow *keiretsu*-type cooperation among U.S. companies.

McCurry admitted that "Japan is not completely blameless" for the trade deficit and that it should open its market to more foreign products.

He said Japanese automakers have already achieved most of their growth here and that their market share probably won't rise above "30 to 31 percent — about where we are now."

Other Japanese import executive comments on trade topics:

- Yoshi Taura, president of Mazda Motor of America Inc., said proposed limits on the sale of Japanese automakers' U.S.-built models won't solve the trade problem. "We're selling our cars through 900 American dealers. If there's a reduction put on us, it will hurt them and their American employees."
- Like other executives, Thomas Elliott, American Honda Motor Co. Inc. executive vice president, said he will try not to let trade discussion distract his company from selling cars.

"We're going to try like heck to sell 850,000 cars" in 1992, Elliott said. That would be about a 6 percent gain over 1991. ■

Staff Reporter Max Gates contributed to this report.

INCENTIVE WATCH— DEALER INCENTIVES

NEW PROGRAMS	
ACURA (1991 models, expires May 1)	
Legend sedan	$2,500
Legend coupe	$3,000
Integra (expires Feb. 3)	$500
ISUZU (No expiration date; 1990-92 models unless otherwise noted. Rebates vary by regions.)	
Impulse	$1,300-2,500

incentive WATCH

New dealer incentive programs have been announced by Toyota Motor Sales U.S.A. Inc., Mitsubishi Motor Sales of America Inc., Nissan Motor Corp. in U.S.A. and American Isuzu Motors Inc., and previous programs have been modified or extended by Ford Motor Co., Subaru of America Inc., and Acura Division.

Through Feb. 3, **Toyota** is paying dealer incentives of $600 on the 1992 Corolla and $700 to $1,200 on 1992 and 1991 pickups.

Mitsubishi's incentive program includes 1990, 1991 and 1992 vehicles and expires Feb. 10. The dealer incentives range from zero to $2,000 per unit, based on region, vehicle and number of vehicles sold.

In its Southeast region only, Mitsubishi is offering dealers a one-time lump-sum payment based on total sales against total sales objectives. The payments range from $1,000 to $18,000.

In its Western region only, the company is offering consumer rebates of $750 on 1990, 1991 and 1992 Galant, Mirage and Precis cars. In the Southwest region only, Mitsubishi consumer rebates are $1,000 on certain 1991 and 1992 pickups and $500 on 1990, 1991 and 1992 Mirage and Precis models.

Through Feb. 3, **Nissan** is paying dealers $1,700 on all base-model vehicles and $300 on 1991 and 1992 Sentras.

Isuzu is offering factory-to-dealer incentives of zero to $1,900 on 1991 and 1992 trucks, depending on model and region; $1,300 to $2,500 on 1991 and 1992 Impulse models and $600 to $2,500 on 1991 and 1992 Stylus cars, depending on model and region.

Isuzu dealers in California have the option of sharing their rebate with buyers. Isuzu's program runs indefinitely.

Ford adjusted portions of its consumer rebate program. Rebates on all 1992 Lincolns were increased from $1,000 to $1,500 through March 3.

Regional rebates apply to 1992 Ford Escorts and 1992 Mercury Tracers until Feb. 4. The rebates for both car lines are $500 or $750; or 2.9 percent or 7.9 percent financing for up to 48 months depending on region.

Subaru's program, previously scheduled to expire Jan. 3, was extended through Jan. 13. It includes dealer incentives of $1,200 to $1,700 on the 1991 Legacy based on region. Consumer rebates are $500 on the 1992 Legacy L and L Plus and the 1991 and 1992 Loyale and $2,000 on the 1991 XT and XT-6.

Acura extended through May 1 its dealer rebates of $2,500 on the 1991 Legend sedan and $3,000 on the 1991 Legend coupe, dealers said. The program had been scheduled to expire Jan. 3. ■

Special Correspondent Chris Eschenburg contributed to this report.

INCENTIVE WATCH — CUSTOMER INCENTIVES

NEW PROGRAMS	
MITSUBISHI (expires Feb. 10)	
Precis/Mirage (1990-92)	
Southwest	$500
West	$750
Galant (1990-92)	
West	$750
Pickups (1991-92)	
Southwest	$1,000
CONTINUING PROGRAMS	
CHRYSLER CORP.	
Expires Jan. 31. Finance rates in lieu of rebates run from 0 to 9.9 percent on Sundance, Shadow, Acclaim, Spirit, LeBaron sedan and Cherokee, and from 4.9 to 9.9 percent on other models.	
1990-92 models	
NATIONAL REBATES	
Chrysler Imperial	$2,000
Dodge Monaco	$1,500
Shadow	$1,000
Colt 3-door	$500
Dodge Ramcharger	$2,000
Eagle Premier	$1,500
Talon	$1,000
Summit 3-door	$500
Jeep Comanche	$750
Wrangler	$500
Plymouth Laser, Sundance	$1,000
Colt 3-door	$500
REGIONAL REBATES: Northeast	
Chrysler LeBaron sedan	$1,500
Dodge Spirit	$1,500
Dodge Dakota	$1,000
Jeep Cherokee	$1,500
Plymouth Acclaim	$1,500
All Chrysler Corp. minivans	$1,000
REGIONAL REBATES: Central, West	
Chrysler New Yorker Fifth Avenue	$1,500
New Yorker Salon, LeBaron sedan	$1,000
Dodge Dynasty, Spirit	$1,000
Dodge Ram gas pickup (Central only)	$1,500
Ram wagon	$1,000
Dakota	$750
Dodge Ram gas pickup (West only)	$750
Ram 50 pickup	$500
Jeep Cherokee	$1,500
Plymouth Acclaim	$1,000
All Chrysler Corp. minivans	$500
FORD MOTOR CO.	
1992 models	
Expires Feb. 4 unless otherwise noted. In lieu of rebates, finance rates of 2.9 to 7.9 percent are offered. Finance rates differ by vehicle lines and regions. No finance rate incentives on Lincoln models.	
Ford Festiva, Tempo, Taurus	$500
Escort (regional programs)	$500-750
Mustang, Thunderbird	$750
Probe, Taurus SHO, Crown Victoria	$1,000
F series, Aerostar	$500
Ranger	$750
Aerostar (Northeast), Bronco, Econoline (RV pkg.)	$1,000
Mercury Topaz, Sable	$500
Tracer (regional programs)	$500-750
Capri, Cougar	$750
Grand Marquis	$1,000
Lincoln Town Car, Mark VII, Continental (expires March 3)	$1,500
Pre-1992 models	
1990-91 Ford Division models and 1991 Lincoln-Mercury models. Expires Feb. 4. In lieu of rebates, finance rates of 2.9 to 7.9 percent are offered. Finance rates differ by vehicle line and region.	
Ford Tempo, Taurus	$400
Taurus SHO	$600
Escort, Mustang, Thunderbird	$750
Festiva, Probe	$1,000
Ranger, F series, Aerostar, Econoline (except E-150 RV)	$400
Aerostar (Northeast), Bronco, Econoline E-150 (RV pkg.)	$1,000
Mercury Topaz, Sable	$400
Tracer, Cougar	$750
Capri	$2,000
GENERAL MOTORS	
Expires Feb. 4. Finance rates in lieu of rebates start at 2.9 percent for Buick, Oldsmobile and Pontiac; 6.9 percent for Chevrolet and GMC.	
1992 models	
Buick Skylark*	$250-750*
Century, Regal*	$250-1,000*
Riveria	$2,000
Chevrolet Caprice	$1,000
Geo Metro and Storm	$750
Geo Prizm, Camaro, Beretta, Lumina	$500
Cavalier	$500
G van, S/T Blazer, Lumina APV	$1,000
Geo Tracker, Astro, S/T pickup	$750
C/K pickup	$500
GMC G-van, S15 Jimmy (except Typhoon)	$1,000
Sonoma (except Syclone, GT), Safari	$750
Sierra (except Crew Cab)	$500
Oldsmobile Cutlass Ciera (national)	$1,000
Regional programs, various models	$500-2,000
Pontiac Trans Sport	$1,000
Grand Prix	$750
LeMans, Firebird	$500
*Based on option package selected.	
1991 models	
Chevrolet Caprice	$1,000
Geo Metro, Camaro	$750
Geo Storm and Prizm, Beretta, Lumina	$500
Cavalier, Corsica	$300
V Blazer, Suburban, G-van, S/T Blazer, Lumina APV	$1,000
Geo Tracker, Astro, S/T pickup, R/V and C/K pickups	$500
GMC V Jimmy, Suburban	$1,500
S15 Jimmy, G-van, Safari	$1,000
Sonoma (except Syclone)	$750
Sierra, R/V pickups	$500
Oldsmobile - regional programs, various models	$500-2,000
Pontiac Trans Sport, LeMans, Firebird	$1,000
Grand Prix	$750
HYUNDAI	
48 states (expires Jan. 6)	
Excel (1992)	$500
Excel (1991)	$1,000
Scoupe (1992)	$500
Scoupe (1991)	$750-1,000
Sonata (1991)	$500-1,500
California only (1991 models, expires April 2)	
Excel, Scoupe	$750-1,000
Sonata	$1,000-1,500
All states (1991 models, expires Jan. 6)	
All 1991 models if trade is a 1986-90 Hyundai	$1,000

Big 3 chiefs return with some gains

TOKYO — The Big 3 chairmen left Tokyo with far less than they had demanded, but still went home with a few concessions.

They include:

- Marketing tie-ups with Japan's five biggest carmakers aimed at approximately doubling Big 3 sales in Japan to about 32,000 U.S.-built cars a year by 1994.

Under the proposal, Toyota dealers in Japan would begin selling GM products; Nissan would market Fords; and Mitsubishi would sell Chrysler models.

Additionally, Mazda said it would work to increase sales of Ford products under an existing agreement, and Honda promised to increase sales of Jeeps.

Unit sales on that order would give the Big 3 about 0.4 percent of the 7.6-million unit market.

- The top five Japanese carmakers also vowed to increase parts purchase targets set just weeks ago by about $1.8 billion, and said they now aim to reach $17.8 billion in the fiscal year ending in March 1995. That would represent a near doubling of their U.S. spending of $9.07 billion in the 1990 fiscal year, which ended last March.

Including the planned purchases of three smaller Japanese carmakers, spending on U.S.-sourced parts would rise to $19 billion by 1994.

Under the plan to increase sales of U.S.-built cars in Japan:

- Toyota Motor Corp. said it is "prepared to negotiate" with GM to sell about 5,000 cars a year through its dealers. The agreement would be in cooperation with GM's existing distributor, Yanase & Co.
- Nissan Motor Co. said it is willing to sell Ford's new Nissan-engineered Mercury Villager minivan in Japan, and other models such as the Taurus and Taurus wagon. It projects annual sales of around 3,000 Ford units.
- Mazda said it will attempt to import 4,500 Ford vehicles in the 1992 fiscal year, more than double the amount for the 1990 fiscal year that ended March 31.

Mazda sells such Ford models as the Probe, Taurus, Thunderbird and the Lincoln Continental through Autorama, its joint marketing venture with Ford.

- Honda said it intends to triple sales of Chrysler's Jeep Cherokee and Wrangler models to 1,200 units a year by 1994.

Honda previously announced that it will increase the number of its dealers selling Jeeps to 300 from 100. In 1991, 437 Jeeps were sold through Honda dealers, about 30 percent of Chrysler's sales.

- Mitsubishi Motors Corp. said it would sell 6,000 Chrysler units a year by 1994, up from a previously announced commitment of 4,000 units. ■

Ford silence on Aerostar worries CAW

ATHY JACKSON
taff Reporter

Union officials representing workers at Ford of Canada's Oakville assembly plant in Ontario are concerned that the production of the next generation Ford Aerostar may be delayed, canceled or switched to another plant.

Ford of Canada invested $435 million in a new paint facility in anticipation that the plant would get the new minivan, scheduled for the 1994 or 1995 model year.

Workers at Oakville have seen prototypes and photos of the proposed new Aerostar at Ford's pilot plant in Dearborn, Mich., and have received some training on the assembly procedures for the new van.

But the announcement for the new $1 billion program from Ford headquarters in Dearborn is months late, says one union official.

"We don't know if they're going to scrap the idea or give it to another location," a union official said. "We expected an announcement a long time ago."

There also is speculation that Aerostar could be awarded to the Edison, N.J., assembly plant that builds the Ford Ranger.

Ford Motor Co. spokesman Jim Trainer said the company had no comment on the future of the next Aerostar.

The Canadian union official said the proposed new Aerostar will have front-wheel drive and be lower than the current Aerostar, similar in size to the Mazda MPV.

He said once a formal announcement is made, it will take about 22 months to get to Job 1. AN

Output up 18% in December

ANNE E. WRIGHT
Chief Statistician

Car and truck production in December in the United States and Canada rose 18.1 percent over 1990. Cars climbed 18.3 percent, and trucks went up 17.4 percent.

In the fourth quarter, U.S. and Canadian car production slipped 3.6 percent below the same period in 1990. Truck production rose 16.4 percent, pushing the car-truck total for the quarter 3.8 percent above 1990.

Final 1991 car and truck production in the United States and Canada was 10,778,208, down 8.6 percent from 1990. Cars dropped 9.4 percent, and trucks slipped 7.4 percent.

In 1991, the Big 3 produced 4.1 million cars, down 14.3 percent from their 1990 build. Transplant production in 1991 was 1.3 million, up 2.3 percent from the prior year. The Big 3's share of car production in the United States slipped to 75.1 percent in 1991 from 78.3 percent in 1990, while the transplants grew to 24.9 percent from 21.7 percent.

Big 3 truck production dropped 10.5 percent, to 3.0 million in 1991 from 3.4 million in 1990. Transplant companies produced 192,606 trucks in 1991 compared to 173,893 in 1990, an increase of 10.8 percent. The Big 3 share of U.S. truck production dropped to 94.0 percent from 95.1 percent in 1990, and the transplants' share increased to 6.0 percent from 4.9 percent in 1990.

The first weeks of 1992 car and truck production in the United States and Canada trail 1991. This year, the seven-day build was 197,474 at a daily rate of 28,210. In the first eight days of last year, 272,872 vehicles were produced, a daily build rate of 34,109.

Last week's estimated output of U.S. cars was 82,071, down 3.53 from the same week in 1991. Year-to-date U.S. car production is off 27.4 percent.

Truck production in the United States last week was estimated at 39,484, up 5.46 percent from 1991.

In Canada, car production was off 59.0 percent from the year-ago week because the Big 3 were on an extended holiday vacation.

The estimated truck build in Canada last week was up 54.7 percent above the same week in 1991.

Tomorrow, Chrysler Corp. will begin producing the Jeep Grand Cherokee at the new Jefferson North Assembly Plant in Detroit.

Chrysler also announced the addition of a third seven-hour shift at the St. Louis (No. 2) minivan assembly plant. About 1,000 workers were recalled to work Jan. 6.

General Motors scheduled Saturday overtime last week at the Baltimore; Janesville, Wis.; Scarborough, Ontario; and Oshawa, Ontario, truck plants.

Ford scheduled daily overtime last week at the Kansas City, Mo., and Louisville, Ky., truck plants.

Nissan Motor Manufacturing Corp. U.S.A.'s Smyrna, Tenn., plant scheduled Saturday overtime last week and daily overtime this week on both shifts. AN

Hyundai strike prompts closure

SEOUL — Hyundai Motor Co., Korea's biggest producer, closed its main assembly complex in Ulsan late last week after 28,000 unionized workers struck in a dispute over year-end bonuses.

Hyundai said the shutdown would cost it 3,700 vehicles and $32 million a day in lost production. The company, which typically exports 25,000 vehicles a month, said it has not shipped a single vehicle in January.

The dispute began Dec. 17 when the company's union demanded special year-end bonuses. Since then, union members have rejected overtime and slowed their work, effectively crippling production.

The government has labelled the strike illegal.

GM approves China venture

BEIJING, China — General Motors announced here last week that it has agreed to set up a joint venture to produce its compact pickup trucks in China.

The venture, with Jinbei Automotive Co., was reported in *Automotive News* in November.

Under the plan, GM will have a 30 percent equity stake in a partnership to produce as many as 50,000 light trucks a year by 1998.

The plant is expected to have cumulative project costs of about $100 million through the 1990s, although GM will invest about $10 million in immediate start-up capital.

The venture, which is expected to start production around July, could produce as many as 1,000 trucks this

Chrysler speeds deliveries

Program designed to cut dealers' floorplan expense

MARY CONNELLY
Staff Reporter

Chrysler Corp. expects to reduce dealership floorplanning costs substantially by cutting its vehicle delivery time in half within two months. Dealers will save money because they will have to stock fewer vehicles.

It now takes domestic manufacturers an average of 70 days to deliver a vehicle after a dealer places an order, Chrysler said.

But Chrysler expects to achieve a 35-day delivery target within two months and a 20-day target within a year, said Theodor Cunningham, Chrysler executive vice president of sales and marketing, who addressed the Automotive News World Congress last week.

In addition to cutting floorplanning costs, the reduction in delivery time means dealers will need less space for inventory, he said. And customer orders will be filled quicker.

"Reducing the dealer ordering cycle will enable our dealers to respond to the dynamics of their local market with greater agility," Cunningham said. "It also makes the prospect of custom ordering much more attractive to customers.

"By shortening order time, we will reduce the company's costs and the dealers' costs tremendously," Cunningham said.

The reduced delivery cycle will give Chrysler

Keynote speakers Robert Stempel, left, and Stanley Gault flank Automotive News Publisher Keith Crain as World Congress opens. Phone books helped one participant watch a crowded session.

World Congress in focus

Japan trade situation makes it lively, timely

From the keynote address Sunday through the final speech Tuesday evening, faculty members of last week's Automotive News World Congress repeatedly referred to the automotive trade imbalance with Japan.

General Motors Chairman Robert Stempel, just back from his trip with President Bush to the Far East, said, "The conversation started with how much more we would be willing to give away here in the U.S."

Tuesday evening, Gerald Hirshberg, Nissan's U.S. design chief, said exchange between cultures makes designers — and others — thrive. But turning foreign competition into "the enemy" snuffs out that possibility.

Many of the 23 other industry experts who addressed the World Congress also referred to the Tokyo summit and Japan's competitiveness in the United States.

Other topics included the environment, new technology and the global industry. ■

Stories on the speeches appear on Pages 19-24 and 36

Price of new Jeep to match Explorer

MARY CONNELLY
Staff Reporter

Jeep dealers have wrung from Chrysler Corp. the promise that the price of the 1993 Grand Cherokee will be nearly identical to that of its chief rival, the Ford Explorer.

Chrysler apparently has bowed to dealer pricing demands even though the Grand Cherokee is equipped with a driver-side air bag and four-wheel anti-lock brakes as standard. The Explorer has no air bag; it has standard rear-wheel ABS.

The Jeep-Eagle National Dealer Council has argued that pricing parity is critical to the Grand Cherokee's success and that customers would balk at stickers higher than the Explorer.

Chrysler preferred that the Grand Cherokee's price reflect the

GM cutting link with Daewoo

PHIL FRAME
and OLES GADACZ
Automotive News

After months of dodging questions and trying to quash rumors of an imminent divorce, General Motors confirmed Friday that it and Korea's Daewoo Group are negotiating the sale of GM's 50 percent stake in Daewoo Motor Co.

"We're discussing the possibility of them buying us out," said John Pekarek, spokesman for GM's international operations. "We are currently talking. We're negotiating an acceptable price and terms."

The venture was formed in 1984, when GM and Daewoo each agreed to put up $100 million for a plant to pro-

Japanese in no hurry to meet with Big 3 again

RICHARD JOHNSON
Staff Reporter

TOKYO — American auto executives are anxious to meet again with their Japanese counterparts.

But the Japanese executives say they see no reason to go to Detroit soon.

Honda Motor Co. President Nobuhiko Kawamoto last week said he hasn't been invited to go to Detroit. He also said February was too soon.

"There are no solutions yet," he said, but added that he supports the idea of more frequent face-to-face meetings.

A Japanese car company official said his and other Japanese automakers have little to offer for now beyond what they put on the table when the chairmen of the U.S. Big 3 visited Tokyo earlier this month with President Bush.

The Americans want to meet.

General Motors Chairman Robert Stempel said on Jan. 10: "We're planning on (a follow-up meeting). We don't have a date yet. It will be sooner rather than later — February or March. But I prefer February rather than March."

Ford Motor Co. spokesman Al Chambers said no formal invitation has been extended to Japanese automakers.

Ford Chairman Harold Poling and Stempel "discussed it and said the sooner the better because they're looking for meaningful, measurable results in 1992," Chambers said. But he said the proposed meeting may not take place even as soon as March.

One Japanese car company official last week hinted broadly that discussions could resume next month in the United States.

The executive said a meeting could be held as early as Feb. 8 or 9, but most other executives suggested that no meeting could be held that soon.

Meanwhile, there was plenty of rumbling among Japanese auto

from PAGE 1

year. The venture will assemble from imported kits at first, but will aim toward a local-content of 30 percent to 40 percent within five years, GM said.

GM's partner produced about 20,000 light trucks last year.

Porsche income off 70 percent

STUTTGART, Germany — Porsche AG has reported a 70 percent decline in fiscal 1990-91 earnings. Worldwide group net income, for the year ended July 31, fell to $10.7 million (17.1 million deutsche marks) from $35.6 million a year earlier. Sales fell 1.2 percent to $1.9 billion.

Arno Bohn, chairman of the luxury sports-car maker, forecast sales would drop to 25,000 units from 26,485 in the last fiscal year, primarily because of poor sales in the United States. He expects markets in Germany and Japan to remain stable.

Earnings may not improve substantially until fiscal 1993-94, Bohn said, but he insisted that Porsche could withstand the declines and would not sell stakes in the company.

Bohn refused to confirm speculation that Porsche is developing a lower-priced sports car with Mercedes-Benz, but he said, "We are always cooperating and working with many suppliers and competitors. That is the wave of the future," he said.

— Diana T. Kurylko

Pontiac, Nissan target Camry

Pontiac is joining the growing trend toward comparative automotive advertising with a new campaign pitting its redesigned Grand Am against Toyota Camry and Honda Accord.

Auto marketers say the ongoing industry sales slump is a prime cause of the increase in comparative advertising.

The Pontiac campaign, breaking today, claims the Grand Am has a more powerful engine and better fuel economy than a Camry or an Accord, plus standard anti-lock brakes, and that the price is several thousand dollars less.

Nissan Motor Corp. in U.S.A. also is slamming the Camry in a humorous print ad for the Nissan Stanza.

Accompanying the photo of a man with electrified hair is the headline, "We can see by your face that you've priced the new Camry."

Oldsmobile is running a West Coast campaign comparing its new Achieva directly to the Accord and Camry.

— Crain News Service

A 'flat' year for Peugeot

PARIS — Earnings at France's Peugeot SA Group, which produces the Peugeot and Citroen marques, declined in 1991 and sales were flat, Chairman Jacques Calvet said last week.

But Calvet, speaking at a press conference here, declined to give numbers.

Group production fell to 1.23 million vehicles from 1.41 million in 1990, he said. Sixty-two percent of total output was exported.

The company also announced a plan to cut vehicle development time from the current five years to four years by January 1994 and to three years by 1999.

XT6 recalled for steering bug

CHERRY HILL, N.J. — Subaru of America is recalling about 13,000 XT6 coupes equipped with an electronically controlled motorized power-steering system.

The models affected were produced from June 1987 through September 1990. In these vehicles, the electronically controlled motorized power-steering system may malfunction, resulting in an intermittent loss of power-steering assist. When the system fails, power assist is lost but steering control is maintained with increased effort.

Rolls, Bentley raise prices

Prices of Rolls-Royce and Bentley sedans have been increased 4 percent for the 1992 model year, and convertibles have gone up 7.5 percent.

In the rarefied realm of Rolls, it means that the sedans have risen $5,800 to $7,300 and the ragtops have jumped $17,000. Rolls sedans start at $157,800 for the Silver Spirit II; Bentley's price leader is the Mulsanne S at $149,900. The base Bentley sedan, $123,500 last year, is not offered for 1992.

The Bentley Continental convertible is $242,900, and the Rolls Corniche IV soft top is $243,700.

New to the Rolls lineup is the Silver Spur II Touring Limousine. Its $310,000 sticker is the highest of any motor car sold in the United States. It is labeled a 1993 model. Bentley has two newcomers, the Turbo R long-wheelbase sedan at $204,200 and the Continental R coupe at $261,800. The coupe is a 1993 model.

ADP acquires computer firm

CHICAGO — Automated Data Processing Inc. has acquired Autonom Computer Beteiligungs GmbH, headquartered near Dusseldorf, Germany, for an undisclosed amount.

Autonom is one of the leading independent auto dealership computing services companies in Germany, serving over 1,000 dealerships. ADP Dealer Services is a leading supplier of computing services to automobile, truck and heavy equipment dealerships in the United States and Canada.

"ADP's entrance in the European dealership computing marketplace is very timely due to the economic unification of Europe and the development of a shared market structure and currency," said Gary Butler, president of ADP's Dealer Services Division.

Amati moves into new home

IRVINE, Calif. — Amati, the luxury division of Mazda Motor of America Inc., has moved to its new headquarters.

The building, near Mazda's headquarters in Irvine, also houses the offices of Amati's Western region. The Eastern region is based in Bridgewater, N.J. Amati's Irvine headquarters also will include a model of an Amati dealership.

The division is scheduled to begin selling two luxury sedans in 1994.

briefly

Iacocca wine outsells cars

Contrary to reports that **Chrysler** Chairman Lee Iacocca says it is impossible to sell to the Japanese, he *has* had success. Iacocca sold 6,000 units in Japan last year . . . of wine. Only 1,491 Chrysler vehicles were sold there. Customers include local department stores, hotels, restaurants, and lately, the Ministry of International Trade and Industry. MITI held a staff party after the Big 3 chairmen left town, to thank employees for their hard work during President Bush's visit, and celebrated with about 10 bottles of Iacocca wine.

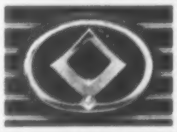
SALES SPOOK — **Chevrolet** officials expressed amusement at **Ford's** ability to come up with 34,000 full-sized pickup sales in the last 10 days of December to claim the "best-selling" title for that vehicle line. "We decided internally that they introduced a new truck model, called the Phantom," to get that last-minute surge, said Jeff Hurlbert, general marketing manager. Chevrolet feels that when actual registrations come out in two months, they'll get the title of full-sized pickup leader.

OUTSPOKEN PRIORITIES — Here's a lesson in political correctness for Detroit. Texas Sen. Lloyd Bentsen, who is heading Democratic efforts to boost the economy, has slated a Thursday hearing to review President Bush's trade mission to Japan. First on the list of invited witnesses is Lee Iacocca, the loudest critic of Japan's trade practices. If Iacocca can't make it, Bentsen's Finance Committee plans to invite **Ford** chief Harold Poling, who has endorsed the Democrats' plan to require Japan to reduce its trade surplus. And if Poling can't come, **General Motors** Chairman Robert Stempel, who has been the most moderate in his views, will get the nod.

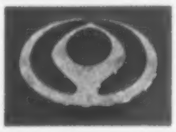
MODIFIED MONIKER — The pending arrival next fall of the Defender sport-utility has prompted **Range Rover of North America** to study changing its own name. So far, the Range Rover banner has suited the five-year-old firm fine because it has sold only one product, the Range Rover. The likely new name: Land Rover of North America.

$ CLASS — The car that's as expensive a house? Traditionally, a **Rolls-Royce** or **Bentley.** But now the **Mercedes-Benz** S class has the 600SEL sedan ($127,800), and the new 600SEC coupe, which will probably cost more. Competition for the big Brits? Howard Mosher, president of Rolls-Royce Motor Cars, sees it the other way: The German company has "perhaps given Mercedes buyers a reason to look at a Bentley." (Lowest price: $149,900.)

FANNING THE FIRE — **Mazda** got by without a hood ornament for years, but when it introduced the new 929 and MX-3 last year, it also launched an emblem: stylized wings around a stylized flame, symbolizing the ancient god named Mazda. After just six months, it has been revised. The new RX-7, 626 and MX-6 have the same wings, but the flame within is much rounder. Turns out some folks thought the diamond part looked like **Renault's** symbol. "This is more creative," said a Mazda spokesman.



Old: Renault-ish



New: More creative

Ford, GM gain share in Europe

DIANA T. KURYLKO
Staff Reporter

Porsche earnings fall 55 percent ➤ 36

FRANKFURT — The European subsidiaries of Ford Motor Co. and General Motors managed slight sales increases last year in a 17-nation market that rose only 0.24 percent from 1990, to 13.46 million units.

According to industry estimates, Ford of Europe outperformed General Motors Europe by ending 1991 with a record 1.61 million sales, up 3.3 percent or 52,000 units from 1990. GM also finished with record sales of 1.58 million units, up 19,600 units or 1.2 percent from 1990.

But Ford's bigger volume gain amid a weak market increase was enough for it to displace GM as the fourth-biggest seller in Europe. Ford's share of market rose three-tenths of a percentage point, to 12 percent, while GM rose one-tenth of a point, to 11.7 percent.

Ford's results include sales of its wholly owned Jaguar unit, and U.S.-built imports. GM's results include sales of its Opel and Vauxhall units, and imports. If GM's 50-percent-owned Saab unit and 60-percent-owned IBC Vehicles Ltd. unit are included, its 1991 market share would have been 12.2 percent.

GENERAL MOTORS

The small rise in Opel/Vauxhall brand sales may be the only silver lining in an otherwise dismal year for the U.S. parent.

Financial results have not yet been released, but analysts expect GM's European earnings to approach 1990 levels of $1.91 billion and sales to topple last year's $23.9 billion. GM Europe had a profit margin of 8 percent last year.

Robert Eaton, president of GM Europe, said Opel/Vauxhall sales reached an "all-time high" despite the model changeover of its bread-and-butter car, the Kadett, to the Astra. The all-new Astra went on sale in October.

"The new Astra is off to a strong start throughout Europe," Eaton said.

"Demand is still exceeding production capacity,' he said, "but this should be alleviated when our new plants in Hungary and Germany — which come on stream this year — are able to operate at full capacity in 1993."

GM said it sold 583,000 Kadetts and Astras last year, which was not enough for the model to hang on to the second-best seller ranking for Europe.

Those bragging rights went to the Ford Escort/Orion on sales of about 620,000 cars.

The Ford Fiesta also beat Kadett/Astra, ending the year with sales of 615,000 units. The Volkswagen Golf again was the runaway European leader, with sales of nearly 800,000 units.

GM said its German-based Adam Opel AG division showed a sales increase of 15 percent, to $17 billion, despite a production drop of 5 percent due to the Kadett launch.

Louis Hughes, Opel's chairman, said unit sales of the brand grew 26.2 percent in 1991, to 719,000 cars, while share in Germany, its largest market, grew to 17.2 percent.

Hughes said the German market grew 28 percent because of demand from the reunified eastern states, where Opel was the No. 1 seller with 17.9 percent market share. Opel sold 130,000 cars in eastern Germany last year.

Hughes predicted that German sales would decline 17 percent this year, to 3.5 million units. Several analysts have forecast slightly steeper drops.

Hughes warned that the current success Opel is experiencing in Europe "should not lead us into a false sense of security."

With the impending threat of less restrained Japanese competition, "a revolution is required in the European auto industry," he said.

FORD OF EUROPE

Despite Jaguar's blight-stricken numbers and a continuing recession in its home market in Britain, Ford ended the year virtually tied for third-place market share with France's PSA Group, maker of Peugeots and Citroens.

Ford said European sales of its Jaguar unit slid 35 percent from a year earlier, to 12,200 units, amid a steep downturn in the luxury segment. But sales of U.S.-made Fords, led by the Probe, surged to 7,200 units from 1,200 the year before, the company said.

Ford said its sales in Britain slid 24 percent, to 391,750 units, yielding a market share of 24.5 percent, off 1 point from 1990.

L. Lindsey Halstead, chairman of Ford of Europe, said he was optimistic that the introduction of new products and a 16-valve engine this year will increase Ford sales in 1992.

But Halstead said he expects the European car market to fall to 12.8 million units.

Ford said its sales in Germany surged 31 percent from a year earlier, to about 430,500 units, as market share increased to 10.3 percent. It marked the first time in recent memory that Ford's German sales outpaced sales in Britain.

"The German market has increased its significance not only in Europe but within Ford of Europe," said John Hardiman, chairman of Ford-Werke AG, the German unit.

Ford said it achieved a record market share in France last year of 8.7 percent, while share in Italy, where the company waged an aggressive price war with Fiat, jumped to 11.3 percent.

Hardiman said Ford is launching a "product offensive" this year, and its major improvement will be a new generation engine for the Fiesta and Escort/Orion. ■

Pace slows on Mexico trade deal

Auto content rules a sticking point

LINDSAY CHAPPELL
Staff Reporter

Election-year politics and disagreements among automakers are slowing the drive for a North American free-trade treaty.

Automotive firms operating in Mexico, Canada and the United States are at odds over how to word a treaty that would stretch the existing U.S.-Canada free-trade zone to Mexico.

Consequently, the effort to dismantle trade and investment barriers between Mexico and its northern neighbors is lagging behind expectations. An agreement probably will not be reached as fast as previously expected, said U.S. government sources.

Last month, the Bush administration and Mexican President Carlos Salinas de Gortari reaffirmed their commitment to a free-trade treaty and asked negotiators to complete a preliminary negotiating text by the end of January.

Both presidents have called for a free-trade treaty by the end of this year, and Congress has given President Bush "fast-track" authority to push through an agreement without amendments.

Automotive trade has become one of the thorniest issues. "The

Sales slide 6.7 percent to start '92

JIM HENRY
Staff Reporter

NEW YORK — Auto dealers and executives forgot to knock on wood last year when they looked at January's first sales numbers and said, "It can't get any worse than this."

It did.

New car and light-truck sales declined 6.7 percent from New Year's Day to Jan. 10. And that's compared to a year-ago period when sales fell 30 percent, just before the Persian Gulf war.

Cars accounted for this year's falloff, with a drop of 11.1 percent. Truck sales rose slightly.

Because of this year's soft sales, the industry's stock of cars and light trucks remained plentiful despite longer holidays at many plants. There was a 76-day supply as of Jan. 1.

Pickups were an exception, after Ford and Chevrolet stripped the shelves in a year-end battle for 1991 sales leadership. Ford's pickup stocks fell to 37 days on Jan. 1, from 78 a month earlier. The supply of Chevy pickups dipped from 100 days to 66.

For the first 10 days of January, light-truck sales managed a small improvement of 1.1 percent to 81,938 units.

But truck sales were so bad as the war began last year that some analysts worried that fear of a gas shortage was depressing them. The gas shortage never happened, gas prices went back to normal and 1991 light-truck sales wound

MAZDA'S HINDSIGHT

Lingerie models were among designers' inspiration for new cars

WILLIAM R. DIEM
Assistant Managing Editor

The five new Mazda models introduced in the past year share a single design philosophy.

The cars are the 929 and 626 sedans and the MX-3, MX-6 and RX-7 coupes. The philosophy is a good rear end.

Mazda's top U.S. designer, Tom Matano, and his boss in Japan, Shigenori Fukuda, general manager of the design division, decided several years ago to put their emphasis on achieving a terrific rear three-quarter view of the upcoming generation of its cars.

Matano explains why:

"When you ask American men what is sexy, they talk about the curve of hip and thigh and leg. They might like breasts, sure, but sexiness is in the hips. They like the rear three-quarter view.

"I like to take the new designers to a restaurant where they have a lingerie show, models walking around all the time during lunch, and I ask them to remember how the light falls on the curves of the body.

"If I sent them a pile of documents, they wouldn't even read them. This way they remember.

"Then I take them out on the freeway, and we watch the cars go by, and I ask them, what is the view you see most of other cars? The three-quarter rear.

"Japanese designers like the face; they spend all of their energy on the front view. But Fukuda and I decided several years ago that we would go for the rear three-quarter view." Matano said he has not researched to the same degree what American women find sexy in men. "Shoulders maybe? Chest?" ■

Luxury imports slump as stickers rise

JIM HENRY
Staff Reporter

NEW YORK — High-priced luxury cars were a hard sell in 1991, pummeled by a new luxury tax, the Gulf War, down-in-the-dumps consumer confidence and a sense that conspicuous consumption is out.

The general rule on imports was: the higher the price, the more sales fell.

At the higher end, for instance, Rolls-Royce and Bentley together sold about 450 cars in the United States, down about 60 percent for the year.

Rolls-Royce even paid the luxury tax — which can exceed $16,000 on a Corniche convertible — for a while, but sales still plunged.

The varied impact of the tax, which added 10 percent on the amount of a car's price over $30,000, can be seen at BMW of North America Inc. Last year's sales of the entry-level 3 series were down only 181 units, helped by an all-new 325i introduced last June at $27,990.

But the mid-level 5 series, which topped out at $42,600 for the 1991 535i, fell 26.1 percent. The 7 series, capped at $74,000 for the 1991 750iL, sank 47.3 percent.

The pattern was echoed at rival Mercedes-Benz of North America Inc. Mercedes sales were off 24.9 percent for the year, but the entry-level 190 class, starting at $28,350 for 1991, slipped only 2.8 percent.

Sales of the mid-range 300 class ($41,400-$58,500 for 199) dropped 31.6 percent, and the flagship S class ($57,800-$82,900 for 1991) was off 30.1 percent, even though an all-new S class was introduced last fall.

At Lexus, the top-of-the-line LS400 lost sales, even as the brand was improving. Lexus sales were up 12.1 percent, as Lexus introduced the ES300 sedan and the SC300 and SC400 coupes. But the $42,200 LS400 declined 13.7 percent.

Infiniti sales shot up 45.6 percent, but nearly 40 percent of that total was accounted for by the new-for-1991 G20, an $18,300 entry-level model. The top Infiniti model, the $42,000 Q45, rose 17.7 percent, going against its short inaugural year.

December totals looked particularly gloomy for high-end models, but the comparison was compounded by a beat-the-tax rush in December 1990. In that year-ago month, BMW and Mercedes-Benz both posted near-record sales. Rolls-Royce had its best month ever with sales of 254 cars. ■

Mercedes-Benz of North America will put more emphasis on product and less on image, no matter which of four agencies wins the account now in review, according to Erich Krampe, president and chief executive officer of the German luxury car importer.

Krampe, interviewed at the North American International Auto Show in Detroit, also said Mercedes will likely shift funds out of network advertising into regional efforts, and said the company has no interest in running comparative advertising.

Mercedes is planning a decision in late February on the account, estimated at $100 million including national and regional advertising, dealer marketing support, direct marketing and other promotional work.

Incumbent McCaffrey & McCall, New York, which has held the account for 12 years, has an "equal chance" in the review, Krampe said. The other finalists are Ally & Gargano of New York; Scali, McCabe, Sloves of New York; and the Dallas-based Richards Group.

"The reason (for the review) was not that we were dissatisfied with McCaffrey & McCall," Krampe said. "The reason was that, step by step, we are reviewing everything with the company.

"And advertising is an enormous part, the biggest part next to personnel. So after 12 years, I think it's the normal thing to do."

The agency review means Krampe will help establish Mercedes' future U.S. marketing direction before joining German parent company Daimler-Benz AG as deputy member of the management board, in charge of worldwide passenger car sales and marketing. Michael N. Bassermann, president of Mercedes-Benz Japan, will succeed Krampe next July.

Mercedes' U.S. sales peaked at 99,300 cars in 1986, coinciding with a strong economy and a widespread social acceptance of conspicuous consumption. Beset in 1991 by the faltering economy, a new luxury tax and increased Japanese luxury-car competition, the company's U.S. sales dipped to 58,868 cars, a 24.9 percent falloff from 1990.

Krampe said it was clear that marketing strategies that succeeded in the 1980s were not necessarily the best way to reach today's more prudent buyers.

Krampe: "These days you have to . . . sit down with the customer."

"In the past you could say, 'OK, the image will automatically get you sales.' These days you have to basically sit down with the customer and explain what you have to offer. And that is a different ballgame," Krampe said.

"Perhaps we were too much image-oriented in the past, and we neglected certain things.

"Take the issue of safety. I think we can claim that we are one of the pioneers in safety but for a long time we didn't bother to mention it in our advertising," Krampe said. "We will come back to the basics and talk about what our products can offer."

Mercedes won't join the growing trend of auto marketers who bash their competition. "We are not going that route. We respect our competition — they have their merits; we have our merits," Krampe said.

The agency review follows a major decentralization begun in 1990 with four new regional offices. Regional marketing executives, who are taking part in the agency review, control about 30 percent of the total ad budget.

Krampe indicated the trend to regionalizing Mercedes' advertising will continue.

"We have to economize, which doesn't mean cutting, but more shifting (of funds) to where you have the best chance to reach the customer. This could lead to more regional television and less national," he said.

Mercedes spent just over $30 million on network TV advertising in 1990, the last full year for which figures are available from the Television Bureau of Advertising. ■

GMC ups target for gas trucks

DETROIT — GMC Truck has more than 2,000 orders for the natural gas powered pickups it will begin building in April. GMC may build up to 10,000 in its first year, according to Lewis Campbell, general manager.

Heavy interest from fleets, commercial operators and utility firms led GMC to expand its sales beyond its original 2,000-unit minimum and Texas, California and Colorado markets.

GMC will build natural gas-powered full-sized vans, medium-duty trucks and an expanded range of full-sized pickups. They are dedicated natural gas vehicles, rather than dual-fuel models.

Truck parley on foreign outlook

ENGLEWOOD CLIFFS, N.J. — Four more prominent industry officials joined an international group of speakers addressing Heavy Duty Dialogue '92, the biennial conference of the Heavy Duty Manufacturers Association.

Dialogue '92 will examine the challenges the heavy-truck industry faces in moving toward globalization. It is scheduled to be held in Washington March 23-25.

New speakers include Douglas Christensen, president of TNT Contract Logistics Inc. in Buffalo Grove, Ill.; Dwight Denny, executive vice president and general manager of Ryder Truck Rental Inc. in Miami; Cees van der Burg, president of Burg, Fabriek van Wegtransportmiddelen B.V. in Pijnacker, The Netherlands; and Dr. Takashi Suzuki, executive vice president of Hino Motors Ltd.

Also addressing the meeting are Helmut Werner, deputy chairman of Mercedes-Benz AG and 13 other officials of truck fleet firms, manufacturers and analysts.

Smith addresses dealer convention

McLEAN, Va. — Broadcaster Howark K. Smith will address the American Truck Dealers annual convention slated for April 11-14 in San Francisco.

Other speakers include George Rafferty, chairman of the American Truck Dealers; David J. Hovind, executive vice president of PACCAR Inc.; Henry Schacht, chairman and chief executive officer of Cummins Engine Co.; and Richard Strauss, the National Automobile Dealers Association's 1992 president.

Volvo GM plans satellite link up with truck dealers

GREENSBORO, N.C. — A satellite communications system linking all WhiteGMC truck dealers to one network will be put into operation by Volvo GM Heavy Truck Corp. within the next two years.

The WhiteGMC Dealer Communications Network combines satellite and computer technology. It will be the company's primary data communication system with dealers.

General Motors' Electronic Data Systems Corp. will implement and manage the network. It will use its Information Processing Center in Auburn Hills, Mich., WhiteGMC dealers and Volvo GM Heavy Truck.

EDS also provides technical management of GM's Pulsat Network that covers GM's 9,500 dealers.

Each WhiteGMC dealership will be equipped with a small aperture terminal antenna, a multipurpose digital interface unit, and a network controller and other equipment to complete the installation.

Basic network equipment will be installed at dealerships at no cost, according to Ron Hickman, Volvo GM manager of dealer development.

He predicted WhiteGMC dealers will get more reli-

Navistar squeaks by Freightliner in Class 8

JOSEPH BOHN
Truck Editor

Navistar International Corp. squeaked out a last-minute win over Freightliner Corp. to retain its No. 1 standing in Class 8 heavy-truck sales during calendar 1991.

The photo finish between the two was 22,824 for Navistar vs. 22,617 for Freightliner. The latter had pulled ahead of Navistar for 11 months, but fell off its pace a bit in December as a result of a brief strike.

Third place went to VolvoGM Heavy Truck, with 12,113 sales, followed by Kenworth with 11,752, Mack with 10,480, Peterbilt 9,396; and Ford 8,479.

It was a generally bad year for heavy trucks; calendar 1991 sales of 98,730 were off 18.7 percent from a year earlier.

Medium-duty truck sales fared badly as well. The best performance was a 12.1 percent decline for Class 4 sales.

Class 5 sales were off 31.8 percent for the 12-month period, Class 6 was off 40.9 percent, and Class 7 dipped 18 percent.

In the medium-duty segment, though, GMC Truck came in as strongly as Freightliner did in the heavy segment.

GMC's share of the medium-duty conventional market increased to over 33 percent in calendar 1991 from 30 percent a year earlier, according to Ray Rota, GMC general sales manager.

The division is shooting for a 37 percent share in 1992.

"If we get that, we'll be in a strong first place," Rota said. Ford and Navistar are GMC's principal competitors in the medium-duty segment. The three account for about 90 percent of the sales in this market, with imports making up the balance.

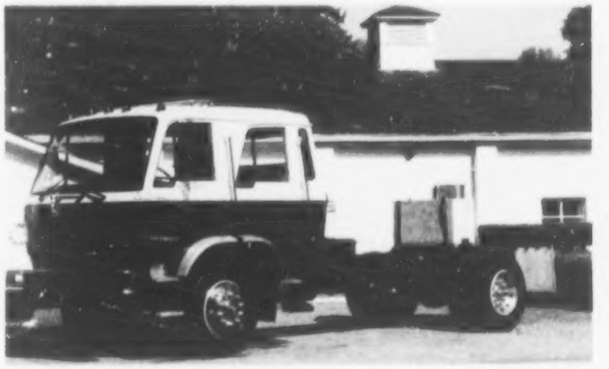
In order to achieve its goal, Rota said that GMC plans more sales and service support for the 650 dealers who sell Chevrolet and GMC medium duties. GMC handles marketing of medium trucks for both divisions.

Currently, the same field representatives call on both light- and medium-duty dealers. GMC plans to have representatives dedicated exclusively to medium-duty dealers.

Rota said that one representative for every 25 dealers will be required.

GMC plans to get the 26 dealer representatives it needs by shifting people and reassigning them from administration, for example, into the field.

GM's current cost-cutting efforts rules out the hiring of additional people. AN



New UD Crew Cab

Nissan Diesel has added a fully enclosed, four-door crew cab option to its UD truck line for utility, construction and rescue markets.

GMC's low-cab-forward delayed by budget cuts

JOSEPH BOHN
Truck Editor

GMC Truck came within a whisker of producing its own medium-duty low-cab-forward to compete with imports in that segment.

Ray Rota, general sales manager for the division, said that General Motors has a low-cab-forward in development that was to be ready for budget in January but has been delayed due to the corporation's forthcoming cutbacks.

"We definitely intend to do it," Rota said. "It's just a matter of when the capital becomes available."

With GM cutting overhead at every level, each division had to make some contributions "and that was our contribution," Rota said.

program, though, which has gone through all necessary corporate channels except for budgeting.

GMC plans to go back for funding approval for the low-cab-forward "as soon as we get an opening," Rota said.

As planned, the new vehicle(s) would be Class 6-7 products, supplementing the Isuzu-built Forward and Tiltmaster trucks that GMC markets through Chevrolet and GMC dealers.

GM needs the low profile models to keep the Janesville, Wis., plant at full capacity. The plant currently produces only medium conventionals.

GMC had its biggest year ever with its W-4, W-5, W-6 and W-7 Tiltmaster and Forward trucks, selling 4,078 units in calendar 1991

GM, Ford to show 'clean' themes at NADA

DALE JEWETT
Service Editor

General Motors will use the National Automobile Dealers Association convention to launch a marketing and merchandise campaign touting the environmental benefits of service for both dealers and customers.

Ford Motor Co.'s Parts and Service Division will also stress an environmental theme in its display at the dealers' gathering in Dallas Feb. 8-11.

The Ford Rotunda Equipment display will have an array of dealer service equipment designed for environmentally oriented service such as emissions testing, waste oil recycling and reclamation of air conditioning refrigerant.

Ford company representatives will also have information on environmental regulations and legislation.

GM's effort, under the banner of Environmentally Smart Service, is an extension of its "smart cars, smart tools and smart people" philosophy, said Dick Lannen, general director of the Service Technology Group.

In addition to the Service Technology Group, the program involves GM's dealer equipment program, service parts operation and the vehicle marketing divisions, including Saturn.

An important key to the effort is the use of compact discs from the service technology group that contain service specifications, bulletins and diagnostics.

GM is requiring that by this fall all of its dealers in the United States and Canada have equipment capable of reading the discs and using them to service vehicles, including the reprogramming of engine management system computer chips.

A videotape explaining the requirement is being sent to all GM dealers, Lannen said.

The convention will be the setting for the introduction of two new, low-priced computer service systems available to GM dealers through the dealer equipment program:

■ The T-5 is a benchtop personal computer that can be connected to GM's hand-held Tech 1 scan tool to service vehicles.

■ The T-50 is a roll-around computer system with a printer. The system can connect directly with a vehicle or be used in conjunction with the Tech 1 scan tool.

Both the T-5 and T-50 are manufactured for GM by IBM.

Many GM dealers are already using the compact discs with the Computerized Automotive Maintenance System and the T-15 diagnostic units. More than 5,400 of those units are in dealerships.

The service technology group is also working to supply disc readers for dealerships that use service systems from outside vendors such as Reynolds and Reynolds Co. and ADP Dealer Services Inc.

Currently, only the computer chips in Corvettes and Geo cars can be reprogrammed using the Tech 1 and a plug-in cartridge. For the 1993 model year, about 40 percent of GM cars will have reprogrammable chips, with a goal of 100 percent by the 1996 model year, Lannen said.

Switching to compact discs storing the engine information electronically will save dealers the cost of stocking different computer chips and buying new Tech 1 cartridges at each update, which currently run about $100 each.

Dealers receive an updated disc about 10 times a year, Lannen said.

The NADA convention display will also cover GM's efforts in emissions testing, vehicle maintenance and several recycling programs, including motor oil, air conditioning refrigerant, engine coolant and lead-acid batteries.

And for the first time, the service groups will take the message to the public with a display at the Chicago auto show Feb. 8-16.

Lannen said the separate service display was put together at the request of the Chicago-area GM dealers. Technicians from the dealerships will man the show booth, discussing service and giving free car care advice. ■

GM will use its Environmentally Smart Service theme in print ads, including this one for two new pieces of service equipment.

in brief
SERVICE

Engine warranty extended by GM

General Motors said it is extending the warranty on 1.6 million 1986 and 1987 model cars with 3.0-liter and 3.8-liter engines to correct a problem with intermittent stalling.

GM said the campaign is not a recall and that not all of the cars equipped with the engines, both of which have been discontinued, will have the problem. Cars involved include Oldsmobile Cutlass Ciera, Cutlass Calais, Toronado, Ninety Eight and Eighty Eight; Buick Century, Skylark, Riviera, Park Avenue and LeSabre; and Pontiac Grand Am and Bonneville.

The problem involves calibration of the mass air flow sensor, crank sensor and engine PROM.

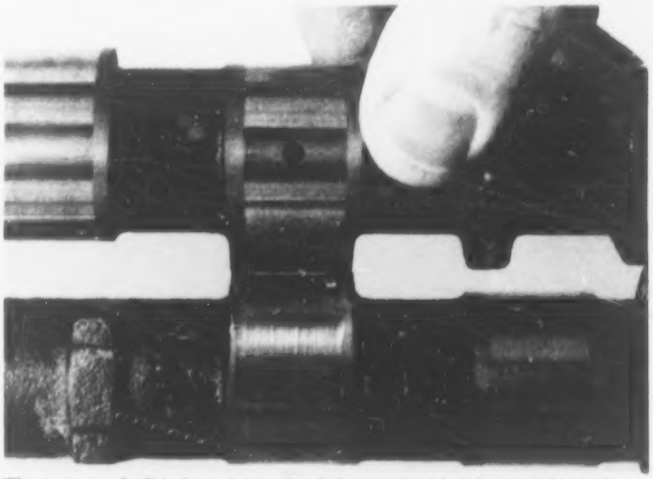
— Phil Frame

Import service market to grow

WYCKOFF, N.J. — The import vehicle service aftermarket will surge 55 percent to $21.9 billion by 1996, according to a report from Lang Marketing Resources Inc.

The service market for import vehicles totaled $10.9 billion in 1991, the report says. New-car dealers took the biggest portion of the business with 30.4 percent, followed by service stations with 14.1 percent and import vehicle repair specialists with 13.8 percent.

Do-it-yourself product purchases for import vehicles



The top camshaft is from an engine lubricated with Advanced Formula Mobil 1. The lower camshaft, from an engine with conventional motor oil, has a groove worn into the lobe surface. Both engines ran for 24 days.

Mobil: New synthetic oil helps cars meet EPA rules

DETROIT — Mobil Corp. is introducing an advanced synthetic motor oil that it says helps new cars keep engine exhaust emission levels within EPA guidelines, even after the equivalent of 15 years of hard driving.

Advanced Formula Mobil 1 replaces the original formula Mobil 1 that was introduced in 1976.

Mobil said that engine parts lubricated with new formula showed virtually no wear after 200,000 miles of operation. Oil and filters were changed at recommended intervals.

"The new formulation gives us improvements not only in wear, but also in cleanliness and high-temperature performance that represent synthetic motor oil in the mid-1970s," said William Maxwell, lead engineer of the reformulation team.

The company said the new formula provides increased lubricant stability at the intense temperatures found in compact auto engines, improving engine performance at high speeds.

In standardized industry tests, Mobil said, new Mobil 1 is up to four times more stable in hot-running engines than conventional motor oils.

The new formula also is more fluid in cold temperatures, pouring easily at 55 degrees below zero, the company said.

Advanced Formula Mobil 1 is

Service work trails 1990

Along with new-car sales, parts and service business continued to suffer at the hands of the recession in November.

Repair business in November 1991, as measured by the Automotive News Service Index, was 98 percent the level recorded in November 1990.

For the 11-month period from January to November 1991, repair business was 98.7 percent of the total recorded for the same period in 1996.

The decline in November marked the seventh month in 1991 that parts and service business lagged behind year-ago totals.

For the month, the largest drops were noted in gross profit on all labor and parts and accessory sales, down 3.3 percent, and sales of all parts and accessories, down 3.1 percent. Repair orders written declined 2.6 percent.

Conversely, total labor sales increased 2.4 percent in November 1991 from November 1990.

Year-to-date figures show an increase only in shop parts sales, up 1.3 percent. The largest declines were noted in sales of all parts and accessories, down 1.8 percent, and gross profit on all labor and parts and accessory sales, off 1.3 percent.

Figures used in the Automotive News Service Index are compiled from monthly reports on service and parts business from a cross-section of new-car dealerships. ■

SERVICE INDEX
98.0*

	Nov. '91 vs Nov. '90	Jan.-Nov. '91 vs Jan.-Nov. '90
Gross Profit on All Labor and P&A Sales	– 3.3%	– 1.3%
Repair Orders Written	– 2.6%	– 0.08%
Total Labor Sales (Customer & Warranty)	+ 2.4%	– 0.4%
Shop Parts Sales (Customer & Warranty)	+ 0.7%	+ 1.3%
Sales of All P&A...........	– 3.1%	– 1.8%

* Survey by Automotive News shows that dealers' service and parts business in November 1991 was 98.0 percent of business in November 1990. Service business in the first 11 months of 1991 was 98.7 percent of business in the corresponding period in 1990.

Vehicle finder has 95% success rate

LOS ANGELES — LoJack Corp. said that almost 1,100 stolen vehicles equipped with its electronic location system were recovered in calendar year 1991, a 95 percent recovery rate.

Since the program was started in 1990, more than 2,650 LoJack-equipped vehicles have been recovered, said John Raber, LoJack of California's marketing director.

Currently there are more than 120,000 LoJack-equipped vehicles ham, Mass., has operating systems in alliance with law enforcement agencies in California, Massachusetts, New Jersey, Michigan, Illinois and Florida.

The company also has forged agreements in Georgia and Virginia and has begun building systems for those states' agencies.

The LoJack system retails for $595, including installation. The electronic recovery system is sold through a network of authorized

SALES

Industry stockpiles stand at 76 days

continued from PAGE 3

up 9.4 percent behind 1990, compared to a decline of 12 percent for cars.

Car sales in early January dropped 11.1 percent to 130,879. There were eight selling days in the 10-day period each year.

Ford Motor Co. posted higher sales for both cars and trucks, compared to the dismal year-ago period. Ford truck sales were up 3.6 percent; they fell 29.8 percent in the first 10 days of 1991.

General Motors sales fell dropped 11.5 percent, even though GM's light-truck sales were off only about 0.7 percent, again compared to poor year-earlier sales.

Sales rose 2.1 percent for American Honda Motor Co. Inc., thanks to a 6.4 percent increase for the Honda nameplate.

Toyota Motor Sales U.S.A. Inc. slid 8.4 percent despite a big improvement for Lexus.

And Nissan Motor Corp. in U.S.A. skidded 7.1 percent, due to declines for both Nissan and Infiniti.

Automotive News estimates 10-day sales for Chrysler Corp. and most imports. Early January marks the first anniversary of Chrysler's refusal to report sales more often than monthly. Chrysler sales were up an estimated 242 units, or 0.8 percent, over the year-ago period.

Industry sales in December were down only 2.3 percent from a year earlier, considerably less than the full-year decline. That helped shave the supply of cars and trucks to 76 days as of Jan. 1, from 80 days a month earlier.

Aided by the thinning supply of trucks, Ford Motor had the leanest inventory of the Big 3 at 59 days, down from 78 days.

Toyota Motor Sales maintained its razor-thin inventory, slipping from 33 to 31 days. ■

obituaries

Charles Atwood

WATERTOWN, Conn. — Charles Leman Atwood, 50-year co-owner and manager of Atwood Pontiac, died Dec. 25. He was 89.

Ezra Galpin

PRESCOTT, Ariz. — Ezra Galpin, 76, longtime owner of the Galpin Ford dealerships in Buckeye and Prescott, Ariz., died Jan. 7.

V.W. Leyda

CHANDLER, Ariz. — V.W. "Jack" Leyda, retired owner of Chandler Motors, died Jan. 3. He was 90.

Lexus dealers top Dec. sales

KAREN DETKOWSKI
Statistician

Lexus dealers sold an average of 69 units per outlet in December to top the *Automotive News* sales-per-dealer calculation.

Lexus reported sales of 8,694 cars, up 28.9 percent from December 1990.

The top three positions changed order in December. Saturn dealers fell to the third spot after holding the No. 1 position since September, when then champion Toyota was pushed to third place.

Toyota dealers ranked second in December.

Sales-per-outlet slipped in December for Toyota and Saturn. Toyota slipped three unit sales per each of its car-truck dealerships, and Saturn car-only franchises lost six sales per dealer from November.

In December, nine of 40 makes showed increases, seven were even with November and 24 posted decreases. ■

JEEP

New model's price to match Explorer

continued from PAGE 1

vehicle's additional content.

Jeep dealers, in Detroit last week for the introduction of the Grand Cherokee, were told that all three Jeep Grand Cherokee models will be priced within a few dollars of the Explorer. A Jeep-Eagle spokesman confirmed that Grand Cherokee prices will be "right on" the Explorer and that any price differences will be negligible.

The 1993 Grand Cherokee will be offered in base, Laredo and Limited models. Prices of the 1992 four-door four-wheel-drive Explorers are: XL, $18,505; XLT, $20,401, and Eddie Bauer, $23,553. Prices for the 1993 model year could increase.

The current Jeep Cherokee line will be repositioned in August at the start of the 1993 model year, dealers also were told.

The current Jeep Cherokee Laredo will be renamed the Jeep Cherokee Country and will become the top-of-the-line Cherokee. Currently, the Cherokee Limited is the top-of-the-line model. A base model and a Cherokee Sport model will round out the revamped 1993 Cherokee line. The base, Cherokee Sport and Cherokee Country will have less standard equipment than current models, and prices will be reduced accordingly.

Advertising for the Grand Cherokee models, which Chrysler began building last week, will kick off with 15-second teaser spots during the Winter Olympics in February, dealers said. But the vehicle will not be shown in ads until the Grand Cherokee's official announcement day of April 19.

The ad campaign will use several far-flung points of exploration, including the polar ice cap, the Mojave desert and Mount Kilimanjaro, to underscore Jeep's rugged tradition. The ads point out how long it took nature to produce those wonders and suggest that Chrysler, too, has expended considerable time and effort in bringing forth the new Jeep.

There is no mention of competitive vehicles such as the Explorer in the ads. In marketing the Grand Cherokee, Chrysler will suggest that the Jeep is distinguished from its competitors because it has Euro/Japanese handling characteristics.

> Grand Cherokee advertising will kick off during the Winter Olympics.

Honda chops sales, earnings forecast

RICHARD JOHNSON
Staff Reporter

TOKYO — Reacting to slumping sales in both the United States and Japan, Honda Motor Co. has slashed its sales and earnings forecast for the year and cut both U.S. and Japanese production schedules.

During the three-month period from January to March, Honda said it will cut passenger-car output by 55,000 units, including 10,000 in the United States.

Of the 45,000 units in Japanese production to be dropped, 30,000 were planned as exports to the United States.

Meanwhile, Honda is paying dealer incentives of $500 on 1991 Civics and Preludes sold through Feb. 2 in the United States.

Honda is now forecasting a 17 percent decline in group net profit, to 63.1 billion yen (about $505 million), for the fiscal year ending March 31.

Just last November, Honda said it expected a consolidated net profit of 80.1 billion yen for the fiscal year. That would have left the company with a marginal increase over the previous year's earnings of 76.2 billion yen.

For the six-month period ending Sept. 30, group net income decreased 5.2 percent, to 43.1 billion yen.

The company blamed the downward revision on "an unexpectedly rapid decline in sales in the Japanese automobile market and prolonged recession in the U.S. automobile market."

Honda said its revenue for the fiscal year will rise 3 percent from a year earlier, to 4.43 trillion yen, but would fall short of its earlier forecast of 4.53 trillion yen.

Honda had expected sales of 350,000 units in Japan and exports of 360,000 units during the second half of the fiscal year. However, domestic sales are now pegged at about 270,000 units during the period, while exports are expected to be 345,000.

Honda said its home-market volume fell 1.1 percent in 1991, to 678,684 units, the first decline in seven years. The total includes 450,546 passenger cars and 228,138 minicars below 660 cc. In the United States, Honda sold 803,367 cars, a 6.0 percent decline from 1990.

For the 1992 calendar year, Honda said it expects to sell 468,000 passenger cars and 212,000 minicars in Japan, for a combined total of 680,000 units.

Honda said it sold 7,667 U.S.-built Accord coupes and 6,550 U.S.-built Accord wagons in Japan last year.

December up 4.6% in Canada

JEREMY SINEK
and ANNE E. WRIGHT
Automotive News

December sales gave the Canadian industry a push at year end, but it was not enough to beat 1990.

Sales of cars and light trucks in Canada rose 4.6 percent last month, bringing the year's total to 1.2 million, or 1.8 percent below 1990.

In the end, plunging interest rates in Canada (the prime rate fell about 5 percentage points throughout 1991 to below 9 percent) weren't enough to overcome shaken consumer confidence. And while inflation has eased, the nation's unemployment rate remains steady at 10.3 percent.

Yet compared with the U.S. market, where sales were off 11.2 percent, Canada had a good year. Total-car sales in Canada dropped 1.2 percent, and trucks slipped 3.1 percent. In the United States, cars fell more than trucks.

Ford of Canada President James G. O'Connor noted that the industry sold 367,000 more vehicles in 1991 than it did during 1982. "You can see the auto industry has come through the current downturn in much better shape," O'Connor said. "The sky has not fallen."

Chrysler Canada was the only Big 3 firm to increase sales last year. Chrysler's car sales were off 1.5 percent, but trucks, led by record minivan sales, gained 12.2 percent and pushed Chrysler's year-end totals ahead by 4.5 percent. An 18.1 percent sales jump in December marked the seventh-straight month that Chrysler topped year-ago results.

In December, total light-vehicle sales in Canada rose for the second month in a row, to 72,237. Cars were up 1.6 percent and trucks climbed 10.4 percent over December 1990.

Ford had a strong December, rising 26.1 percent above 1990, while GM fell 7.5 percent. For the year, Ford's sales were down 8.2 percent and GM dropped 5.4 percent.

Among import brands reporting gains for the year were: BMW (7.6 percent), Honda (3.2 percent), Mazda (13.5 percent), Nissan (12.3 percent), Subaru (9.7 percent), and Toyota (3.3 percent).

For 1992, GM of Canada President George Peapples is predicting 1.33 million car and truck sales for Canada. Other predictions are more optimistic. Ford is projecting 1.40 million sales; Nissan, 1.38 million; and Toyota, 1.35 million.

DELIVERY

Chrysler acts to cut floorplan expense

continued from PAGE 1

a competitive edge over Japanese vehicle manufacturers, which rely on imported parts and vehicles.

"We'll be able to beat the Japanese on this one," Cunningham said.

Though ordering systems vary by importer, most Japanese companies stock their dealer inventories with much less specific dealer input than domestic dealers have.

This month, Nissan begins national rollout of a program tested in Dallas that allows Nissan dealers to order specific models — including color, transmission and options.

Under the Nissan system, however, it will stretch delivery time from 30 days to 90 days.

Cunningham said the greatest hurdle to the automaker is ensuring that all tiers of suppliers as well as Chrysler's manufacturing system are able to respond quickly to dealer orders.

In addition, vehicle transportation time from the manufacturing plant must be reduced.

"We are in the process of working with our supplier base now," Cunningham said.

Chrysler already has begun chopping the order cycle through process redesign, he said.

Process redesign, at its simplest, breaks down any task into steps and identifies motions that can be eliminated.

Cunningham also said customer satisfaction in the dealership showroom is paramount to Chrysler as the company prepares for a barrage of critical new products in 1992.

Chrysler began building its 1993 Jeep Grand Cherokee sport-utility last week, and production of its LH sedans begins in June. The 1993 mid-sized LH sedans, which are crucial to Chrysler's future in the car market, will be sold as the Dodge Intrepid, Chrysler Concorde and Eagle Vision.

Cunningham said Chrysler wants to make "a cultural change" at its dealerships before the LH launch.

Training for all personnel at all 5,000 Chrysler dealerships will begin in May, he said.

Cunningham: suppliers are critical

He declined to specify the cost of the project.

Each dealership employs an average of 25 to 30 people.

Training will draw on the successful practices of brands such as Infiniti, Lexus and Saturn, Cunningham said.

He also made it clear that Chrysler remains committed to linking vehicle incentive payments to dealership performance.

Many of the company's dealers opposed the plan when it was unveiled in November and have asked Chrysler executives to reconsider the proposal.

Chrysler has proposed that monthly sales objectives and customer satisfaction ratings be used to determine dealer cash incentive payments on various models.

Chrysler would give the largest cash amounts to dealers scoring highest on a performance matrix devised by the company.

Dealers have opposed the plan, saying it would create competitive inequities and accelerate the failure of weak dealerships.

But Cunningham said he expects "to move the needle" on customer satisfaction by tying the cash payments to CSI performance.

Value of vehicle imports from Japan rises 11%

LINDSAY CHAPPELL
Staff Reporter

The value of Japanese vehicles imported into the United States rose sharply as the 1991 model year closed, and U.S. exports to Japan dropped.

Data from the U.S. Department of Commerce indicate that the value of Japanese vehicles imported increased 11.6 percent in the July-September period.

The results reversed recent trade patterns because rising production by Japanese car factories in the United States has meant a decline in the value of Japanese imports. Commerce Department analysts believe the rise in value reflects the shipment of higher-priced cars from Japan.

While the value of imports increased $578 million for the period, the number of vehicles imported from Japan increased only about 3,000 — from 515,000 in the third quarter of 1990 to 518,000 in 1991. The figures show that the value of the average Japanese import was about $1,000 more in the 1991 period than in the 1990 period.

The third-quarter change pushed the value of Japanese auto exports to the United States to $22.6 billion for the 12 months ended Sept. 30, 1991.

That was nearly the same as a year earlier.

The Commerce news comes amid U.S. appeals to Japan for assistance in reducing this country's $30 billion automotive trade deficit. About two-thirds of that is in vehicles, and the balance is in parts.

In the same quarter, U.S. exports to Japan fell nearly 17 percent, to $93.6 million. Boosting U.S. vehicle exports to Japan was a central issue in President Bush's visit there two weeks ago.

As a result of the drop in the value of exports and the rise in the value of imports, the U.S. deficit with Japan in vehicle trade increased 12.2 percent for the quarter. That helped boost the overall vehicle trade imbalance to $10.2 billion for the quarter.

The U.S. trade picture improved a bit as U.S. factories shipped thousands of new cars and trucks to Saudi Arabia and Kuwait.

Domestic automakers exported 20,000 trucks to the two countries in the first nine months of 1991, compared with only 2,000 in 1990. They shipped 32,000 cars there during the nine-month period, up from about 15,000 a year earlier.

Meanwhile, most European exporters continued their year-long decline in U.S. shipments in the third quarter.

The value of vehicle shipments from Germany, Sweden, Italy, the United Kingdom and France also dropped.

Mexican vehicle exports — led by increasing shipments of Mexican-made Ford Escorts and Mercury Tracers — rose more than one-third.

The value was $764 million in the third quarter of 1991 and $566 million a year earlier. AN

The sticker price of the 1992 Stealth R/T Turbo with all-wheel drive is up $1,325 over 1991.

Chrysler caps price hikes for '92 intro

HIGHLAND PARK, Mich. — Chrysler Corp. has placed firm prices on the 1992 models it imports from Mitsubishi Motors Corp. in Japan and the models it purchases from Mitsubishi's Diamond-Star Motors Corp. in Normal, Ill.

All prices are higher than the final 1991 stickers.

The imported models are the Dodge/Plymouth Colt hatchback; the Eagle Summit hatchback and four-door wagon; the Plymouth Vista wagon; the Dodge Stealth sports car and the Dodge D-50 pickup truck.

The Diamond-Star models are the Plymouth Laser and Eagle Talon sport coupes and the Eagle Summit sedan.

Price increases over the final 1991 figures range from $238 on the Colt GL and Summit ES three-door hatchback to $1,325 on the Stealth R/T Turbo with all-wheel drive.

The firm prices of the Vista and Summit wagons and the Laser and Talon are the same as the tentative prices that were issued when the 1992 models were introduced in October.

The firm prices of the Colt, the Summit sedan and hatchback, the D-50 pickup and the Stealth are $72 to $300 higher than the tenta-

DAEWOO

GM backing away from joint venture

continued from PAGE 1

duce the subcompact Pontiac LeMans coupe.

Pekarek and a GM official in Seoul were quick to stress that the sale of GM's stake would not mean a retreat from Korea.

"We'll continue to maintain a presence in Korea. We'll continue to supply components to Daewoo. Pontiac will continue to sell and service the LeMans," Pekarek said.

Beyond its stake in Daweoo Motor, GM has two parts ventures with the Korean conglomerate, Daewoo Automotive Components Ltd. and Koram Plastics Co. GM's other non-Daewoo joint ventures in Korea include Delkor Battery Co. and Shinsung Packard Co.

Pontiac General Manager John Middlebrook said GM would rather regard Daewoo as a supplier than a partner. He would not discuss GM's reasons for pulling out of the venture, but indicated that the company thought Daewoo was ready to go it alone.

"They have continued to strengthen themselves and their ability to produce cars on their own," Middlebrook said.

"At some point, they're ready to go off on their own and we can divest ourselves of some of our ownership. That's the essence of it, as I understand it."

Pontiac will bring out a facelifted LeMans from Daewoo for the 1993 model year, but beyond that it is looking at other options for sourcing the car, Middlebrook said.

"We want to keep product below our Sunbird. We've got other partners with Isuzu and Suzuki and we continue to look at opportunities and potential there," he said. "Anything we would talk about is beyond our current horizon."

Signs that GM was preparing to throw in the towel began to surface last year when GM entered into exploratory talks with Britain's Inchcape Group to take over from Daewoo the marketing, distribution and service of GM imports in Korea.

Those talks have not yet been finalized. Daewoo's handling of Cadillac and Buick sales in Korea has been tepid when compared to Kia Motors' record-setting sales in recent years of the Ford Sable.

The Daewoo Motors joint venture began to unravel when GM refused Daewoo's requests to invest additional capital into the upgrading of Daewoo Motor's assembly lines at the Pupyong plant.

Daewoo also sought GM's technical participation and funding for new passenger car and truck-assembly facilities which Daewoo is planning to create at a greenfields site in Kunsan.

To sidestep GM's objections to a plan to build a mini-vehicle, Daewoo assigned the new line to another subsidiary, Daewoo Shipbuilding. The car, the Tico, was introduced in June and is meeting sales targets.

Export rights were another source of continual tension.

GM has jealously defended its prime overseas markets against incursions by Daewoo. Daewoo is especially interested in advancing into Eastern Europe on an independent footing, but GM has blocked every attempt by its Korean partner to expand there. AN

GM blames Daewoo for quality problems with the Pontiac LeMans.

Cadillac, Japanese makers initiate rebate programs

ARLENA SAWYERS
Staff Reporter

Cadillac and three Japanese makes fueled the incentive fires last week with new factory-to-dealer incentives and/or consumer rebates.

The Japanese entries are American Honda Motor Co. Inc., Mazda Motor of America Inc. and Subaru of America Inc.

Until March 31, **Cadillac** is paying consumer rebates of $1,500 on 1992 Brougham and De-Ville Fleetwood models.

Honda is paying dealer incentives of $500 on 1991 Civics and Preludes through Feb. 2.

Mazda's programs include a $1,000 customer rebate on the 1991 Navajo and Protege and $500 on the 1992 Protege. Mazda dealer incentives range from $350 to $700 on the 1991 Protege and 323 and the 1991 and 1992 MPV. Mazda's programs expire Feb. 3.

Subaru announced a new incentive program that is a modified version of the one that ended Jan. 13. The XT models are excluded this time. The new plan offers a $500 consumer rebate on some 1992 Legacy and 1991 and 1992 Loyale models and factory-to-dealer cash of $1,200 to $1,700 on 1991 Legacys depending on region.

The rebates expire March 3. AN

Crash data is revised by NHTSA

MAX GATES
Staff Reporter

WASHINGTON — The National Highway Traffic Safety Administration has revised its new-car crash program to indicate when the heads of test dummies do not strike interior surfaces.

The change affects so-called "head-injury criteria" scores, which record the forces exerted on the heads of driver and passenger dummies during NHTSA's 35-mph crashes. Now, NHTSA will indicate if the dummies' heads did not strike any interior surfaces.

In the past, carmakers have criticized NHTSA's methods when the scores indicated that serious injury probably would occur in a real crash but film showed that the dummies' heads hit no surfaces.

Last year, General Motors officials took NHTSA to task when a crash of the Saturn SL2 produced a head-injury score of 1,018 for the passenger-side dummy. Under NHTSA's ratings, a score above 1,000 indicates that serious head injury is possible.

GM officials argued that crash test film showed that the dummy's head barely grazed the instrument panel and a human would not have suffered serious injury.

The reporting change was revealed as NHTSA released results of the first three of the 35 vehicles scheduled to be crashed under its New Car Assessment Program for 1992 models.

The three — the Oldsmobile Eighty Eight, Mitsubishi Diamante and BMW 325i — had head and chest injury scores under the cutoff

Road to Canada rough for Yugo

JEREMY SINEK
Staff Correspondent

TORONTO — Canadian entrepreneur Peter Dennis — who in the past has introduced BMW, Saab and Lada to the nation — now has the rights to Yugo.

Last week Dennis said he had signed 32 dealers and hoped to begin sales of the Yugoslavian import this spring.

But there are obstacles. A major shareholder in the venture recently went into receivership. In addition, about 1,500 1992 cars that have already crossed the Atlantic were mistakenly built with 1991 vehicle identification numbers. Dennis is seeking permission to change the numbers.

Supply questions also exist overseas. Yugos are waiting to be shipped from the port in Bar, Yugoslavia, said Dennis. But the country "has no merchant marine," he said. "They have to charter ships from other people, and nobody is particularly interested in sending ships into that war zone."

Still, Dennis says he's undaunted: "If I'm going to do it, I *will* do it."

NHTSA steps up Excel belt inquiry

WASHINGTON — The National Highway Traffic Safety Administration has upgraded its investigation of possible shoulder-belt failures in 1987-89 Hyundai Excels.

The complaints involve two-point, non-motorized passive restraints used on 152,000 vehicles. NHTSA says there have been 67 complaints, including 48 accidents involving 43 injuries and seven deaths. The study now moves from the paperwork stage to an "engineering analysis."

The agency also opened an initial evaluation of reports that anti-lock brakes on 1990-91 Toyota 4Runners lose their effectiveness. Complaints involving two accidents and five injuries were logged.

Output up as plants reopen

ANNE E. WRIGHT
Chief Statistician

All U.S. car and truck assembly plants will be closed today in observance of Martin Luther King Jr. Day.

Last week's estimated U.S. car production rose 33.8 percent from the prior week when nine plants were idle, but it fell 4.0 percent below the year-ago week.

Estimated truck production in the United States was up 61.9 percent over the prior week when 14 plants were idle and also topped the year-ago week by 15.6 percent.

Year-to-date, car production in the United States is 212,037, trailing 1991's 258,500 by 18.0 percent.

So far this year, truck assembly in the United States is 117,779, down 12.3 percent from 134,223 in 1991.

U.S. and Canadian makers' daily build rate was 43,197 last week, an increase of 42.4 percent over 29,069 per day the prior week. In the year-ago week, the makers produced 40,138 vehicles per day.

U.S. carmakers split last week's production as follows: General Motors, 50.3 percent; Ford Motor Co., 18.3; Honda of America Manufacturing Inc., 9.6 percent; Toyota Motor Manufacturing U.S.A. Inc., 5.1 percent; New United Motor Manufacturing Inc., 4.0 percent; Chrysler Corp., 3.6 percent; Diamond-Star Motors Corp., 3.2 percent; Nissan Motor Manufacturing Corp. U.S.A., 2.7 percent; Mazda Motor Manufacturing (USA) Corp., 2.1 percent and Subaru-Isuzu Automotive Inc., 1.1 percent.

In Canada, estimated car production last week was 23,962, more than triple that of the prior week as production resumed at GM and Ford assembly plants. Canada's car production also was up 5.2 percent over the year-ago week.

Truck production in Canada was estimated at 21,461 last week, an increase of 10.4 percent over the prior week and up 86.6 percent over the year-ago week.

Year-to-date car production in Canada is 32,448, down 30.8 percent from 46,857 in 1991.

Truck production in Canada so far this year is 48,997, up 55.0 percent over last year's 31,614.

GM scheduled overtime last Saturday at the Scarborough and Oshawa, Ontario, truck facilities.

This week, GM has idled the Bowling Green, Ky., and Lake Orion, Mich., car facilities and the Tarrytown, N.Y., truck plant due to slow sales and high inventories.

The company's Pontiac, Mich. (East), truck plant remains idle because of plant maintenance.

Chrysler scheduled overtime last Saturday at the Windsor, Ontario, minivan plant.

Chrysler has idled the Windsor, Ontario (Pillette Road), truck plant this week due to slow sales.

The sales slump also has idled Ford's St. Thomas, Ontario, car facility this week. The plant produces the Ford Crown Victoria and Mercury Grand Marquis. It will resume operations Jan. 27. The plant will begin to build police vehicles and taxis Feb. 4.

Ex-Hyundai exec to lead Kia

LOS ANGELES — Former Hyundai executive Greg Warner has been appointed to lead Kia Motors Corp.'s sales entry into North America.

Warner, 48, who left Hyundai to form his own consulting company in 1989, was named Friday as executive vice president and chief operating officer of Kia's North American operations.

The company, based in Irvine, Calif., will be responsible for the sale of Kia-badged vehicles in the United States and Canada. It plans to begin sales in mid-1993 with a compact sedan and follow with a compact sport-utility six months later.

Kia is the second Korean automaker, after Hyundai Motor Corp., to create an independent U.S. sales channel. Ford Motor Co. currently sells a Kia vehicle as the Ford Festiva.

Economy KO'd 1,588 dealerships, NADA says

CHARLES M. THOMAS
Staff Reporter

A lengthy and stubborn recession has taken its toll on the nation's new-car dealers, shuttering 1,588 dealerships since 1989, according to the National Automobile Dealers Association.

And even though dealers are operating their businesses more efficiently than ever before, they aren't out of the woods yet, warns Frank McCarthy, NADA executive vice president.

He said the last recession, from 1979 to 1981, was harder on dealers because about 1,800 dealerships closed.

But he cautioned that this recession isn't over yet, and "we're still counting."

According to NADA membership data, the dealership total at the end of 1991 was 23,553, down from 24,198 a year earlier. Dealer members of NADA slipped to 19,065 in 1991 from 19,877 in 1989.

McCarthy also said that the net loss of dealerships could be worse than NADA figures show. That's because dealership closings estimated by NADA may be skewed by the addition of dealerships for new franchises like Lexus, Saturn and Infiniti.

'Buy U.S.' fever spreads

Businesses offer incentives, but few gains are expected

ARLENA SAWYERS
Staff Reporter

A year ago, patriotic fever swept Americans during the Gulf War.

This year, the war is economic. And the fever is "Buy American."

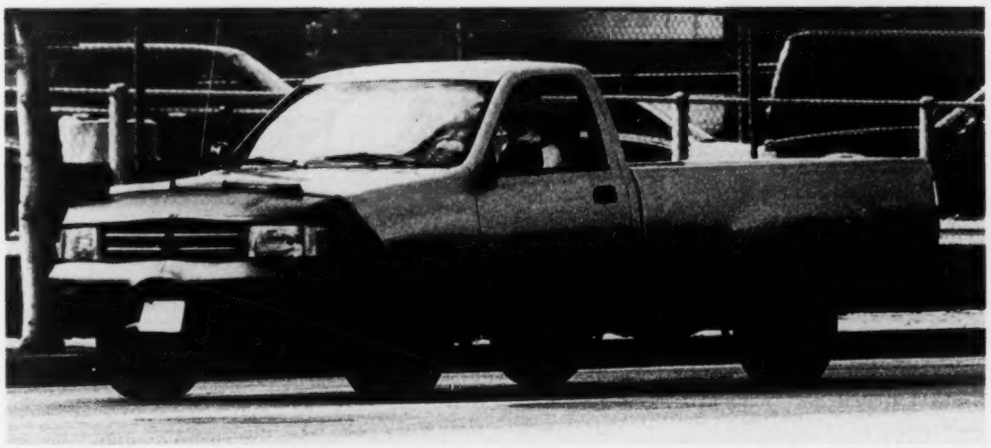
At least, that's what a number of companies are suggesting to their employees.

The persistent recession and the escalating war of words between the United States and Japan have prompted some American businesses to come to the aid of the American automobile industry.

Several businesses are offering cash incentives to their employees or customers who buy or lease "American" vehicles.

At The Brown Paper Co. in Greenwich, Conn., employees are offered $1,000 to buy a U.S.-built vehicle from the Big 3.

Company President Douglas Brown himself replaced his Audi with a 1992 Cadillac Seville STS.



HANS G. LEHMANN/HIDDEN IMAGE

Toyota has reportedly delayed introducing this mid-sized pickup truck to the U.S. market for fear of provoking more anti-Japanese sentiment. Work continues on the truck, which is similar in dimensions to the Dodge Dakota.

Companies — both automotive and non-automotive — are offering up to $1,000 toward the purchase or lease of American cars.

One complication: What's an American vehicle?

Companies are defining domestic vehicles as assembled in the United States or North America, or bearing a Big 3 nameplate. Some programs include and others exclude Hondas or Toyotas assembled in America.

The "Buy American" movement is biggest in Detroit and the Midwest, heart of the Big 3.

Will the "Buy American" movement move the needle?

Some consumer surveys taken at the time of the Persian Gulf war suggested that Americans, taken with the patriotism of the war and angered at Japan's lukewarm support for it, might move back to domestic products. But Japanese makers picked up 1.7 points of U.S. market share in 1991.

"Buy American" programs are largely emotional and do little to change consumers' minds, says John Casesa, an automotive analyst with the New York brokerage firm of Wertheim Schroder & Co.

"It may have a temporary positive effect on Big 3 market share, but it will be fleeting," he says. "There is still a quality gap. The market is a reflection of reality."

Pensions don't boost costs of Ford and GM vehicles

Retiree checks financed by shrewd investments

Big payouts await Big 3 chiefs ➤ 16

MICHAEL J. CLOWES, MARGARET PRICE and CURTIS VOSTI
Crain News Service

U.S. auto companies have at least one model the Japanese carmakers might well emulate — their pension investment operations.

So successful have General Motors and Ford Motor Co. been in their pension fund investments, aided by the strong financial markets of the past decade, that pension payments don't add a single dollar to the cost of a U.S.-built GM or Ford car. Pension costs can add as much as $87 to the cost of a car built in Japan.

Chrysler Corp., hampered by its financial difficulties, its acquisition of American Motors and its one-to-one ratio of pensioners to active employees, still contributes to its fund.

Chrysler is at a competitive disadvantage because pension costs add $585 to the cost of a Chrysler vehicle. But Chrysler's fund also has excellent long-term investment returns.

While the Big 3 have been subjected to ridicule in the nation's media in recent weeks, they have in the last decade quietly become cutting-edge national leaders in an often-overlooked but big-dollar enterprise: managing billions of dollars in pension funds.

GM, Ford and Chrysler, which have 768,000 employees, have accumulated assets with a market value of $57.6 billion to meet their current and future pension obligations. In addition, they have another $11.7 billion for various employee-funded thrift plans; a 401(k) deferred-compensation, tax-sheltered savings plan, and other employee benefit programs.

In the profitable years of the 1980s, Ford and GM contributed generously to the pension funds so they wouldn't have to fund in bad years. That plan worked well. But Chrysler wasn't able to fund its plan as aggressively. They have invested these assets

Mood has switched: Congress now seeks to aid auto industry

MAX GATES
Staff Reporter

WASHINGTON — Washington goes back to work this week with a new attitude toward the nation's auto industry.

When Congress adjourned before Thanksgiving, it had just passed a highway bill that included new auto safety standards and narrowly turned aside debate on new corporate average fuel economy rules.

Now, CAFE is considered dead for this year by nearly all except its chief sponsor, Nevada Democrat Sen. Richard Bryan.

President Bush is reportedly ready to launch a broad attack on federal regulations that add to the costs of business and manufacturing. And there is widespread recognition that the domestic auto industry is critical to the U.S. economy — and both are in trouble.

The shift stemmed from two dramatic events: The

Bryan: Looking for ways to push CAFE bill.

correction

A photo caption in the Jan. 13 edition misstated Mercedes-Benz's production goal for its new SEC coupes. The company said it will produce 8,000 of the new cars for world markets in 1993 — 3,500 units of the 500SEC and 4,500 600SECs. The American market will receive a combined 1,500 units of both models.

HANS G. LEHMANN/HIDDEN IMAGE

Hyundai tests topless Scoupe

Korean automaker Hyundai hopes to broaden the appeal of its Scoupe with a turbocharged version for the 1993 model year and a convertible, as shown in this retouched photo of a prototype, for the 1994 model year. Other changes include a minor facelift with new grille, narrower headlights and rounded fenders.

No. 3 was Infiniti Division of Nissan Motor Corp. in U.S.A. Like Saturn, this is the first year it has been ranked. The survey asks dealers about the value of the franchise, company policies and procedures and how well dealers get along with franchise representatives.

The next positions were held by Range Rover, Honda and Mercedes-Benz (tied), Toyota, Audi, Acura and Saab (tied), Mitsubishi and Mazda.

After Saturn, the highest-ranking domestic franchise was Buick in 17th place. J.D. Power and Associates doesn't publish below-average scores.

— Jim Henry

Lotus lays off another 70

LONDON — Lotus Cars Ltd., the British sports car maker, said Friday it will lay off another 70 workers because of sharply declining sales. The company, which added staff in 1989 and 1990 for production of the then-new Elan, laid off 300 workers last September as sales fell 60 percent.

The company said Elan sales have fallen sharply below target, especially in the United States, its principal market.

The latest cuts will leave the company with about 500 workers, Lotus said. A spokesman said the company will build about 2,000 cars in 1992.

— Ed Wendt

GM recalls cars, trucks

DETROIT — General Motors last week announced three safety recalls involving 214,500 cars and light trucks.

An incorrect machining operation may cause the automatic transmissions in 9,500 1992 cars to engage while the shift lever is in neutral. Affected are Oldsmobile Cutlass Supremes and Cieras, Buick Regals and Centurys, Pontiac Grand Prixs and Chevrolet Luminas.

A second recall involves about 186,000 1985 and 1986 Chevrolet and GMC Truck one-ton C/K pickups and G-30 vans, which could develop cracks in their left-side lower control arms. The crack could spread to the ball joints, causing a loss of steering control.

Another recall involves 19,000 1989 Chevrolet Corsica sedans with optional styled steel wheels. Cracks may develop at the outer edges of the wheel spokes, which could lead to the spokes separating from the wheel rim. That could adversely affect steering and braking control.

Honda to fix bad oil switch

TORRANCE, Calif. — American Honda Motor Co. Inc. will repair about 31,000 imported cars in the United States and Canada for an oil-line problem.

The problem, caused by a defective oil-pressure switch, affects Japanese-made Honda Accords, Civics and Preludes and Acura Legends and Integras. All were produced last November and December.

The problem does not involve cars made at the company's U.S. or Canadian factories. Those cars use a U.S. supplier for the switch, while the imported cars use a Japanese supplier.

A spokesman for Honda North America Inc. said that about 27,000 of the defective cars reached the United States, but about 21,000 of those are still at dealerships or in inventory at American Honda Motor Co.

In all, approximately 70,000 impaired cars were produced, with about 7,800 of them reaching Europe, the spokesman said.

Rover ends 'exclusive' reign

LONDON — Rover Group said last week it will free its 850 dealers in the United Kingdom to sell competing brands on the same site, a move likely to be quickly followed by other major manufacturers.

Rover is Britain's third-largest vehicle maker after Ford and General Motors/Vauxhall.

The action comes as the government prepares to release a report based on Monopolies and Mergers Commission findings that British car prices are as much as 50 percent higher than comparably equipped cars sold on the Continent. The report cited the exclusive-franchise system as being a major cause of the disparity.

— Ed Wendt

UAW lets locals set vacations

DETROIT — The UAW will allow its locals at General Motors to decide individually if they want members to take vacations during a two-week companywide shutdown this summer, said Stephen Yokich, UAW vice president and head of the union's GM department. GM Chairman Robert Stempel in December asked workers to take vacations in the shutdown period that begins July 20 to help cut costs.

At a media briefing last week, Yokich said again that the UAW will not reopen its GM contract to further help the automaker reduce costs. He said GM could have saved billions of dollars if it had used certain provisions of the current contract. He said GM could have saved $1.3 billion alone in benefits to laid off workers if it had eliminated outsourcing and brought jobs back in-house.

— Liz Pinto

Amati names ad agency

IRVINE, Calif. — Amati, the luxury division of Mazda Motor of America Inc., has selected Lord, Dentsu & Partners, N.Y./L.A. to handle its estimated $60 million advertising account.

The agency will spend the next six months "getting to know who we are and what we are about," said Dick Colliver, Amati group vice president and general manager. "Then we're going to take them to Japan. I want them to see all the shrines. After all that, we'll show them the product."

Amati started the formal review last October and chose Lord, Dentsu from among five finalists.

Amati plans to begin selling cars in 1994 for the 1995 model year.

briefly

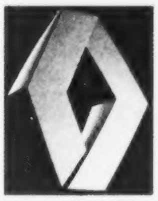
Rolls breaks out the tissues

Before **Rolls-Royce** begins delivery of its new **Bentley** Continental R coupe to the United States next month, it must meet safety standards by having one of the $262,000 ultra plush vehicles pass standard crash tests. When the crash, which demolishes an automobile, occurs, "the caption will read: 'Have you ever seen a grown man cry,' " said Reg Abbiss, senior executive for corporate communications. Rolls-Royce will deliver 90 of the 1993 models to the United States, Abbiss said, and all have been sold.

FROM ROCKS TO STARS— Movie star Michael Douglas does voice-over duty in a new series of ads for **Infiniti**. Rumor has it that agency Hill, Holliday, Connors, Cosmopulos Inc. Advertising negotiated a $3 million, three-year contract with the actor. Research reportedly showed that Infiniti needed a voice that would cut through the clutter and speak directly to Infiniti's non-conformist, aging-boomer target buyers. The agency was reportedly turned down by its first choice, clutter cutter Jack Nicholson.

FAIRY TALE — Ford public relations exec Jerry Sloan has entered his second childhood. Sloan, executive director of civic and corporate affairs, will retire March 1 to start a new career as a full professor of public relations at Ohio University. He said in a press release that he and his wife, Jeanne, "are as happy as two little kids jumping in puddles on a rainy day." Sloan met his wife at Ohio U and never forgot his dream of being a professor there. "But Jeanne and I started having kids, and before we figured out it was because we were using the same toothbrush, we had four children, and I had a career at Ford," Sloan said. Now the happy couple have their wish and they hope everyone else will live as happily ever after.

NEW LOOK — In a move that might be likened to hanging a clove of garlic to ward off vampires, France's **Renault** Group last week unveiled a new logo to reflect what Chairman Raymond Levy calls a "firm determination not to let ourselves be overtaken by competitors." Because of Renault's "radical transformation" in recent years, the company's handout says, its image must now emphasize its "demanding quality standards . . .; Express the modern nature of the company . . . (and) Symbolize the vision of there being more to life with Renault." A heck of a burden to place on a lozenge.



Renault logo: new standards

PHYSICIAN, HEAL THYSELF — Even as Americans push Japanese automakers to buy more U.S. parts to close the trade deficit, **General Motors** is doing the opposite. Some 1990 and 1991 Geo Storms, built in Japan by **Isuzu,** were equipped with oxygen sensors made by GM's AC Rochester Division. Dealer service departments were told this month they are to use a replacement part from Nippondenso, a Japanese supplier, if it is necessary to replace the oxygen sensor. The bulletin said the Nippondenso part is more durable than AC Rochester's part.

Pensions of U.S. auto chiefs dwarf workers', Japanese

JOEL CHERNOFF
Crain News Service

Harold Poling, chairman and chief executive officer of Ford Motor Co., would receive nearly 54 times the pension of the average U.S. autoworker if he retired today.

In fact, Poling would receive nearly $1.1 million a year in retirement benefits — or almost 90 percent of his current cash compensation of $1.22 million. The average assembly line worker at Ford would get $20,400 a year in pension and Social Security benefits, or 53 percent of a $38,355 annual salary. Poling's 1990 compensation — excluding lucrative stock options — is 32 times the average pay for Ford hourly workers.

By comparison, a chief executive of a large Japanese company who chose a life annuity instead of the more common lump sum would get about $171,000 a year after taxes, or 36 percent of pay, while a Japanese worker would get 40 percent to 50 percent of his or her pay, based on gross income. (Although no specific information was available on pay and pensions at Japanese auto companies, the figures are similar for all large Japanese companies.)

Robert Stempel, General Motors' chairman and chief executive officer, also would fare well. If he retired today, his pension at age 65 would be 33 times that of the typical hourly worker. He would get $680,213 a year — or 78 percent of pay. (That calculation is based on Stempel's highest five-year average total compensation — virtually all earned before he became chairman. Presumably, his base earnings will increase substantially.)

But Lee Iacocca, chairman and chief executive officer of Chrysler Corp., likely will suffer a sizable drop in income when he retires. Iacocca, who plans to retire at the end of this year, is guaranteed $253,000 per year — or 28 percent of pay — for 10 years. Converted to a single-life annuity basis — it would be worth between $258,000 and $278,000 a year. That's 12.6 to 13.6 times the retirement pay for an auto assembly line worker.

Iacocca's pension, however, excludes an indeterminable amount of supplemental retirement benefits based on incentive compensation payments, as well as 50 percent of his Social Security benefit and his pension from Ford, where he worked before joining Chrysler in 1978.

GM chairman Robert Stempel would get $680,213 a year at age 65 if he retired today.

Ford chairman Harold Poling would receive almost $1.1 million a year in retirement benefits.

Chrysler chairman Lee Iacocca is guaranteed $253,000 a year for 10 years after he retires.

Gerald Williams, vice president and manager at the Tokyo office of TPF&C, an employee benefits consulting firm, calculated the Japanese executive's pension based on the assumption he retires at age 70 at a salary of 60 million yen ($476,000), after serving nine years as president plus six other years on the board. He would receive a lump-sum benefit of 277.5 million yen ($2.2 million). The figures exclude benefits prior to joining the company's board, which could be the first 30 years of service.

According to Charles D. Spencer & Associates Inc., a Chicago-based employee benefits consulting firm, the average Japanese worker retiring from a large firm would receive 4.2 million yen a year ($33,000) in pension and social security benefits, or 40 percent to 50 percent of pre-retirement salary before taxes plus bonus. ■

PENSIONS

U.S. workers benefit from well-run funds

continued from PAGE 1

in a broad spectrum of investment instruments — including domestic and foreign stocks and bonds, real estate, venture capital and private placements — restricted only by the "prudent man rule" of the Employee Retirement Income Security Act.

They generally have had a heavy commitment to equities. Each has more than 50 percent of the defined benefit assets invested in stocks, with Chrysler having a 60 percent equity commitment and Ford a 58 percent commitment.

LAWS HEM IN JAPANESE

The pension funds of the Japanese companies have operated under tighter investment restrictions, including a requirement that at least 50 percent of assets be invested in Japanese fixed-income securities, and no more than 30 percent be invested in equities.

The pension funds of three of Japan's biggest automakers — Toyota Motor Corp., Nissan Motor Co. Ltd. and Honda Motor Co. — have accumulated only $9.8 billion in assets backing the company pension benefits for 163,000 employees in Japan, according to the Japan Bond Research Institute. But these assets are at book value. The true value depends on what has happened to interest rates and stock prices since the investments were made.

Toyota contributed $161 million to its pension fund in 1990, or $38 per Japanese-produced vehicle. Nissan contributed $95.2 million, or $39 per vehicle. Honda contributed $123 million, or $87 per vehicle.

While the U.S. companies use a broad spectrum of investment management organizations applying a wide range of approaches to invest pension assets — including Japanese managers — the three biggest Japanese automakers use only domestic trust banks and insurance companies.

Until two years ago, all Japanese pension funds were allowed to use only trust banks and insurance companies, although since 1986 Ministry of Finance-approved non-Japanese trust banks could be used. The nine non-Japanese trust banks that have been allowed in the market have garnered less than 1 percent of corporate assets.

The U.S. auto companies have taken full advantage of the funding and investment rules of ERISA to secure the pension benefits of their employees.

They funded aggressively in the years when the companies had strong earnings, and they used the latitude of the "prudent man rule" and the guidance of capital markets theory to seek above-average investment returns in undervalued markets and market segments. The federal "prudent man rule" says that a U.S. pension fund can invest in any any investment that a prudent man, acting with some knowledge of investments, would make.

At the same time, as required by ERISA, they diversified their investments to reduce risk.

GM, for example, diversified from just stocks, bonds and cash equivalents into real estate and non-U.S. equities beginning in 1982. GM was ahead of most pension funds in both areas, and was early enough to have good long-term results in the two asset classes. (See related story on Page 17.)

The fund later added investments in foreign securities, and has used futures not only to hedge portfolios but also to facilitate moves into or out of market segments in a timely fashion.

Domestically, GM built a fund management staff of 60, including 40 professionals, more than 20 of whom are investment professionals. GM also hired a stable of 69 investment management firms that includes leading U.S. firms. The GM staff also manages assets internally.

The objective at General Motors Investment Management Co., the GM subsidiary that oversees GM pension fund investments, is to maximize the investment return on a risk-adjusted basis over time, according to W. Gordon Binns Jr., president of the subsidiary. "That serves the interest of the beneficiaries (by securing their pensions) and the company," he said.

PENSION FUND CONTRIBUTIONS

Amounts U.S. Big 3 and Japan's top three automakers contributed to their pension funds in 1990

	Total contribution (in millions)	Cost per vehicle
General Motors*	$ 0	$ 0
Ford Motor Co.*	0	0
Chrysler Corp.	784	585
Toyota Motor Corp.	161	38
Nissan Motor Co. Ltd.	95	39
Honda Motor Co. Ltd.	123	87

*Income from investments covered GM's and Ford's pension liabilities for the year.

Ford likewise has adopted a diversified investment management approach. As of Sept. 30, it had 58 percent of its assets in stocks, 29 percent in fixed-income investments, 8 percent in cash and 5 percent in real estate. It also invests in oil and gas, venture capital, and private placements, and it uses derivatives. Ford has built a diversified stable of 30 investment management organizations.

Chrysler Corp. contributed $784 million to its pension fund in 1990. Although not as well funded as GM and Ford, Chrysler has diversified across asset classes, using international securities and real estate besides U.S. stocks and bonds. It employs 42 managers with a wide variety of styles and specializations.

MANAGERS ARE ADMIRED

The investment management teams of the three U.S. auto companies are highly regarded in investment management circles.

Thomas Larkin, president and chief operating officer of Trust Co. of the West, in Los Angeles, which manages more than $15 billion for U.S.. pension funds including each of the Big 3, said: "They've got great professional staffs at all three of those companies. (They're) extraordinarily professional. By and large, they are on the cutting edge — leaders as opposed to followers."

As an example, Larkin said, they have developed normal portfolios (portfolios representative of the kinds of securities that fit within each manager's style) with which to measure the performance of the managers, rather than simply using the Standard & Poor's 500 Stock Index.

John W. Rogers Jr., chief investment officer of Ariel Capital Management Inc. in Chicago, a manager for Ford and Chrysler, said the two companies "showed great courage" in hiring his relatively young firm.

"I was impressed with the professionalism of the people," he said. "You get a sense they are very tough and demanding, both in their written and oral reporting."

John R. Thomas, managing director at J.P. Morgan Investment Management Corp. in New York, said: "If you look at the leaders in the U.S. pension industry, I don't think you'd find anyone who would disagree that the U.S. auto companies are leaders in being sophisticated plan sponsors." Morgan manages assets for all three U.S. automakers.

While the automakers declined to disclose the investment performance of their pension funds, GM's Binns said the GM fund's total return had been in excess of 15 percent compounded annually for the 10 years ended Dec. 31. The median large corporate pension fund in the country returned about 15.3 percent in that period, according to SEI Corp., a Wayne, Pa.-based consulting firm.

The Japanese auto companies, meanwhile, have been hampered by the relative youth of the Japanese pension industry, legal restrictions and even cultural differences.

Only since early 1990 have the Japanese pension funds been able to hire non-bank or insurance company managers. In addition, they are limited in their investments. At least 50 percent of the assets must be in assets with guaranteed principal, such as government bonds. No more than 30 percent of the assets may be invested in stocks, and no more than 20 percent in real estate. And no more than 30 percent of the assets may be invested in foreign currency denominated assets.

How series was written

This series on automakers' pension funds was prepared by the staff of *Pensions & Investments*, a sister publication of *Automotive News*. The biweekly newspaper is a leading trade journal of corporate and institutional investing.

VISIONS OF THE PAST

Ironically, the investment management structures at Toyota, Nissan and Honda look remarkably like the structure General Motors abandoned in 1982.

Until that time, GM's pension assets had been managed solely by bank trust departments and insurance companies that had total control over the asset allocation decision. Alternative investments were not used.

Noriyuki Morimoto, an employee benefits consultant with The Wyatt Co. in Tokyo, noted the differences between U.S. and Japanese pension management practices: "In Japan, pension investments are not very important issues for the management of companies, whereas in the U.S., pension investing is one of the most important management issues for companies overall.

"It's not so important in Japan because the amount of pension assets is smaller than in the U.S. It's one-tenth the size, although assets are growing rapidly and becoming a more important management issue. . . . There has been little importance placed, until recently, on performance. But that's changing rapidly because of deregulation and the ability to now hire investment advisers other than trust banks and insurance companies for managing new cash (contributions) into pension funds."

For fiscal 1990, the book value performance — not counting any appreciation of market value of

The $40 billion General Motors Corp. pension fund pays benefits of $250 million each month to more than 300,000 retirees and still has investment returns sufficient to make company contributions unnecessary.

On the other hand, the $5.8 billion Chrysler Corp. pension fund has had to use many of the same investment techniques and some different ones to try to help the company through its financial difficulties and to reduce its unfunded liability.

In GM's case, above-average investment performance by the GM pension management group — now known as General Motors Investment Management Co. — along with extraordinary returns from the capital markets in the past 10 years, eliminated the need for contributions.

> ❛ Our intent is to stay on the leading edge of investment thinking and technology. ❜
>
> **W. GORDON BINNS JR.**
> GM INVESTMENT MANAGEMENT CO.

While W. Gordon Binns Jr., president of the GM investment subsidiary, declined to release specific figures, he said the fund's performance was better than the median return of 15 percent, compounded annually for the 10 years ended Dec. 31, achieved by a group of large corporate pension funds to which the GM fund belongs.

The GM pension fund is in the top 20 percent of U.S. pension funds in the sophistication of its investment activities and the quality of the investment management team, said George Russell, chairman of the Frank Russell Co. in Tacoma, Wash.

The GM fund, under Binns, has become a sophisticated user of most of the investments available to large pension funds today, employing 69 investment management firms and running some assets internally. There are more than 20 professionals on the investment staff.

It also was among the first funds to make a substantial commitment to international investing, and invests not only in foreign stocks but also in foreign bonds. It was among the first to become active in the emerging markets such as Mexico, Brazil and India.

The fund also was an early investor in venture capital and real estate and a pioneer in investing in privately offered securities, an area some consultants believe will become more important to large funds.

In addition, the fund was an early user of derivative instruments, such as futures, not only to control risk but also to change exposures quickly when it sees the need. "This was particularly useful when we were getting contributions," Binns said. "In 1984 and 1985 the company made extra contributions, and the derivatives were useful then in putting those contributions to work."

GM's investment company has continued to study and use the latest derivatives and has a unit dedicated to keeping up with the latest capital market research, investment ideas and investment products.

"We think we have developed

Japanese spending expected to grow

continued from PAGE 16

assets — for the Toyota pension fund was reported as 6.89 percent, down from 8.68 percent in 1988, according to the Japan Bond Research Institute's pensions and investments research department.

For Honda, the 1990 book value performance was reported as 8.69 percent, down from 8.17 percent in 1988.

The 1990 figure for Nissan was not available, but in 1989 it reported a book value return of 7.76 percent, down from 8.44 percent in 1988.

The book value performance is the investment yield (interest plus dividends) as a percentage of the book value of the assets. It does not include market gains or losses on the value of the securities.

Ernest Bianco, president of Frank Russell Japan Co. Ltd. in Tokyo, said all pension plans in Japan are defined benefit plans — plans, entirely paid by the company, which promise a specific retirement benefit.

Unlike in the United States, a lot of pension obligations are carried on the books of the company as a liability with no segregated assets to back them. But a growing amount of pension obligations are being funded, he said.

A U.S. money manager said he expects Japanese corporations to post annual funding increases of 15 percent to 20 percent for the next two decades as they cover unfunded liabilities that have grown up in the years since Japanese companies began their pension plans in the 1960s.

Also in Japan, if a pension fund accumulates assets in excess of liabilities, the surplus assets cannot revert back to the sponsor, Bianco said. The assets can be used only to provide ancillary benefits to retirees, such as retirement housing or recreational facilities.

"Funding of pensions is occurring at an (insufficient) level, given the constraints on how the assets can be managed. Investment returns are less than one should expect in a more efficient investment program," Bianco said.

Although the companies are not accounting for assets at current market value, "they're paying liabilities in current yen. . . . So there is a huge mismatch in the assets vs. the liabilities," he said.

"So it's not clear if assets and liabilities are valued similarly. Some pundits think that the Achilles' heel of Japan is the improper funding of Japan's pension liabilities."

CHANGES TAKING PLACE

Now, however, "Japan is starting to own up to some responsibilities," Bianco said. A yearlong study group, commissioned by the Ministry of Finance and the Ministry of Health and Welfare, and consisting of key pension industry players, will report at the end of March.

The group is addressing such things as performance measurement and the question of pension valuation, he said.

He also noted that despite the easing of restrictions, it's still difficult for Japanese pension funds to hire organizations other than trust banks and insurance companies. And "only the new cash of employee pension funds can be managed by discretionary investment advisers; existing monies must still be managed by trust banks and insurers," he said.

Wallace Wormley, deputy president and chief investment officer of Prudential Investment Advisory Co. Ltd. in Newark, N.J., said changes will be made to ease the requirements enabling investment advisers to manage Japanese pension assets. The minimum size that the investment manager must have under management to be qualified to manage pension assets will be dropped to 500 million yen from 1 billion yen, and the managers will have to keep only 30 percent of assets in Japanese government bonds.

> ❛ Some pundits think that the Achilles' heel of Japan is the improper funding of Japan's pension liabilities. ❜
>
> **ERNEST BIANCO**
> FRANK RUSSELL JAPAN CO. LTD.

And Japanese pension funds have made some moves to hire foreign managers.

Duncan Fordyce, director of the Tokyo office of InterSec Research Corp., noted that the Japan Public School Employee's fund has hired about seven non-Japanese money managers. In addition, Western Japan Plastic hired at least one, and the Pension Fund Association hired several.

Fordyce noted that the book value accounting method preferred in Japan leads to a different method of asset management than in the United States.

If a manager can't sell a security at a loss because he would be penalized by the accounting system, he'll hang onto this security until he has a gain in another security that would offset the loss, Fordyce said.

Therefore, he'll "hang onto the dogs and skim the winners to realize gains to offset losses."

In addition, Fordyce said, in the last couple of years, the restrictions on diversification have cost Japanese funds enormously because of the Japanese securities market's poor performance.

On the other hand, the Japanese companies are funding their pension liabilities aggressively.

Said Fordyce: "We don't have to have an ERISA law passed in Japan to have adequate funding today in anticipation of the needs in 25 to 30 years; it's taking place. ■

Wary analysts expect sales to increase in '92

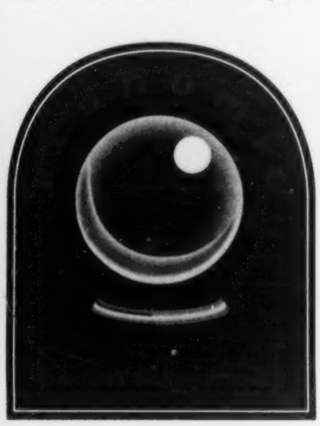
13-14 million seen, a gain of 4-12%

CHARLES M. THOMAS
Staff Reporter

Auto analysts are more cautious in their sales forecasts this year than last, with predictions wedged comfortably between 13 million and 14 million cars and trucks.

That is 4-12 percent more than 1991's dismal sales of 12.5 million vehicles, including medium- and heavy-duty trucks.

The range of new-car sales predicted by analysts for 1992 is 8.7 million to 9.2 million with imports making up 1.9 million to 2.4 million.



Forecasts for import trucks are 300,000 to 600,000 units.

A majority of the 10 analysts polled by *Automotive News* say General Motors will have the greatest gain in new-car market share among the Big 3 and that Ford Motor Co. will lose share.

Jean Claude Gruet, analyst with New York-based UBS Securities, says Chrysler will show the highest volume increase from a percentage standpoint, but GM will have the biggest gain in market share.

But there are other opinions.

"Chrysler will have the largest domestic truck sales increase," said Ron Glantz, analyst with Dean Witter Reynolds in San Francisco.

"GM will have the largest increase in car sales," he said. "Overall, Ford will show the largest decline and Chrysler the largest gain."

Maryann Keller's forecast also ran contrary to those of other analysts.

Keller, managing director of Furman Selz Inc. in New York, predicted Ford will have the greatest gain in market share. GM, however, will end the year a loser.

But, Keller said, market share gains and losses in 1992 will be almost negligible.

The consensus among analysts is that Toyota (including Lexus) will have the biggest market share gain among the imports while shares for Volvo, Volkswagen, Nissan and Hyundai will suffer.

Jack Kirnan, of New York-based Kidder Peabody was the most noteworthy dissident saying Toyota could be hurt by "buy-American" trends.

"I see national politics on the side of the domestic automakers," he said. "Buy-American is creeping into the American consciousness."

Glantz predicts that Mazda will have the largest market share gain among the imports, followed by Mitsubishi, and Hyundai will have the largest decline.

Average unemployment will remain stubbornly high for an election year, according to analysts. Forecasts ranged from 6.5 percent to 7.2 percent.

The range for economic growth as measured by gross domestic product (GDP) was 1.0 percent to 2.7 percent for the 10 analysts polled.

And the consensus is that long- and short-term interest rates will rise after the second quarter of the year if there is an economic recovery.

Segments of the economy expected to grow include health care, housing, autos and exports.

Analysts expect a slight decline, ranging from 1.5 percent to 3 percent, in auto sales in Europe in 1992. AN

Hilty: Mood must change for economy to improve

MARY CONNELLY
Staff Reporter

HIGHLAND PARK, Mich. — Chrysler Corp. predicts that 1992 will bring the slowest economic recovery in postwar history.

Reaching even recession-level sales of 13.5 million units in the United States in 1992 will require an economic stimulus from Washington, says Chrysler chief economist Donald Hilty. Hilty predicts that the economy will not rebound until autumn.

While the statistics argue for an upturn in U.S. vehicle sales, the national mood does not.

Hilty says there is already greater pent-up demand for vehicles than in the recessions of 1960-61, 1969-70 and 1973-75. And auto installment debt has dropped $20 billion since January 1990.

But people are simply not in the mood to buy, and that is the biggest obstacle to an economic upswing, Hilty says.

"Consumer attitudes are about at the same level as in the worst of the 1982 recession," he says.

Hilty: People have to start buying at Sears, K mart.

Chrysler's answer, which it is beginning to peddle in Washington, is an immediate cut in the basic Social Security tax rate paid by both employees and employers.

"We have to see some stimulus out of Washington to get consumer attitudes turned around," Hilty says.

"The stimulus package doesn't have to give people the wherewithal to buy a car. We just would like people to start buying at K mart or Sears. Once their suppliers start coming back to work, people who have jobs will see their neighbors come back to work, and they will start buying vehicles."

Chrysler proposes temporarily cutting the basic Social Security tax rate from 6.2 percent to 4.2 percent paid on $55,000 in wages. The money diverted from the Social Security fund would be repaid with a surcharge when the employment rate improves, Chrysler suggests.

Such a move could pump up to $100 billion into the economy, Hilty says. A household earning $50,000 annually would have an immediate increase of about $80 a month in take-home pay — enough to spark some spending, he says.

"Once you start spending $80 more a month at K mart, it multiplies throughout the economy very fast because K mart buys more supplies and people get back to work fast. It takes effect immediately, and it especially helps the middle class," Hilty says.

"Reducing the rate for the employer is also key because small businesses especially generate a lot of jobs, and if their costs are reduced they would be more inclined to hire faster."

Chrysler expects Washington to stimulate the economy in some fashion in 1992 because President Bush faces re-election in November. Hilty thinks the recent drop in interest rates came too late

see HILTY, 22

Eads fears tax-cut talk, favors interest cut

PHIL FRAME
Staff Reporter

General Motors' economics guru would gladly trade a fiscal stimulus from the federal government for another half-point reduction in interest rates.

George Eads, GM's chief economist, may get both, though, and he's a little worried about that.

"The talk about tax cuts could actually hurt the industry . . . by causing people to hold off a little bit to see what Congress does," Eads says. "If I could trade another half a point of interest rate easing for a pledge to do nothing bad on taxes — not raise taxes on the rich and not fiddle around with a bunch of other stuff — I'd trade that right now."

Eads thinks President Bush will seek some financial stimulus this week when he announces his economic strategies during his State of the Union speech.

"I was one of the eight economists that visited him prior to Thanksgiving," Eads said. "At that point, the principal message we had was interest rates should come down dramatically — and have — and that a little bit of fiscal stimulus wouldn't hurt, provided it could be contained."

That's why Eads thinks Bush will probably seek a cut in the capital gains tax and perhaps some form of investment tax credit.

"But I am concerned about what economists call 'announcement effects' — people being worried about tax changes and holding off purchases until they see what happens," Eads says.

People are worried enough, he says. Continuing consumer concern over the state of the U.S. economy and lack of confidence about their personal financial situation have led Eads to reduce his forecast for sales of cars and light trucks in the United States this year.

He now figures the market is good for 13 million to 13.5 million vehicle sales during 1992. That's down from GM's forecast of 13.5 million to 14 million last October.

"The big thing that's happened (since October) was plunging consumer confidence," Eads says.

> "I am concerned about 'announcement effects' — people being worried about tax changes and holding off purchases until they see what happens."
>
> **GEORGE EADS**
> GM CHIEF ECONOMIST

With the country coming out of a recession during which income growth was poor and personal savings remained low, consumers were not able to pay off debts and didn't have much money to buy big-ticket items, Eads says.

"Consumer confidence makes a big difference" in a situation like that, he says. "So we've been watching that probably as much as anything else" as an indicator of the economy's health.

Eads says there was some stability in consumer sentiment in a report that came out in early December, but those figures were issued before GM's big Dec. 18 announcement that it would close 21 plants and trim nearly 80,000 jobs from its U.S. and Canadian payrolls during the next three years. The consumer sentiment numbers also were issued before the Federal Reserve cut one percentage point off the rate it charges banks to borrow money.

"We're going to be waiting very anxiously to see which of those two things affected consumer sentiment most," Eads says. "So if we were to see in January a resumed decline in consumer sentiment, our forecast for vehicle sales would end up being at the bottom end of that (13 million to 13.5 million) range, maybe even lower. If we see the sentiment stabilized, or maybe even begin to improve, you might see us going to the middle or upper end of that 13 million to 13.5 million.

"I think what caused (consumer confidence) to plunge was a realization that jobs were not being created," Eads says. "I think people turned their focus from the overseas situation to the domestic economy and took a look at their own incomes. They saw, for example, that in the last year, federal, state and local governments together have increased taxes by about $50 billion, or 1 percent of gross domestic product."

Eads: President probably will seek capital gains tax cut.

Eads says it's the first time there have been significant tax increases during a recession since the Great Depression. People saw that their wages and hours worked were not growing. They saw some decline in the interest rates they were paying, but they saw an even more rapid decline in the interest income they were receiving.

"So, they said, 'My situation's getting worse.' And consumer confidence plunged," Eads says.

Job creation is a powerful factor in consumer sentiment and is another important indicator Eads is watching. Job creation appears to be what makes this recovery different from those in the past, he says.

"By this time, you should have seen about a million jobs created from the end of the recession," Eads said. "Look back at all the recent recessions, by this point, six months out, employment would be up three-quarters of a million to a million. Thus far, in this one, we're down a little bit from the trough."

The longer the economy remains in that condition, the more consumers will use the money

see EADS, 22

The Honda Civic VX hatchback's 11.9-gallon fuel tank and 55-mpg highway mileage carry it 654.5 miles per tank of gas — making it the top choice for long-distance cruising.

Long-Distance Runners

Big fuel tanks, high mpg let drivers take the long way home these days

By: Al Fleming

Chuck and Denise Peters are big-car crazy and football nuts.

One early Sunday morning in December, the Northern Ohio couple hopped into their Chevrolet Caprice sedan and drove 250 miles nonstop to Buffalo, N.Y., to watch the Detroit Lions play the Buffalo Bills.

After the game, they soared straight home, completing the 500-mile round trip without once stopping for gasoline.

The Peters' trip underscores three facts. They'll drive anywhere to see a pro football game. They don't like stopping to fuel their Caprice. And most 1992 model cars haul their owners more miles per tankful than comparable automobiles of recent years.

Those long-distance models even include 1992 muscle cars like the Chevrolet Corvette, worthy of the horsepower-happy 1960s, but with superior fuel efficiencies which can deliver 400 to 500 miles and more between freeway fueling stops.

An *Automotive News Insight* compilation of 200 domestic and import models shows the average 1992 car journeys 464 miles on a tankful of gasoline.

Precisely on that mark are the Ford Taurus/Mercury Sable and Mercedes-Benz 300E.

For the study, cruising ranges were derived by multiplying the car's fuel tank capacity by its EPA-estimated highway miles per gallon. For the purpose of comparison, only the most fuel efficient model of each car line was calculated; in most cases that was the base model with standard powertrain.

The study shows 49 1992 models can obtain at least 500 mpg.

The long-distance champ is the Honda Civic VX hatchback, whose 11.9-gallon fuel tank and 55-mpg highway mileage carry it 654.5 miles, good for a non-stop trip from New York to Detroit with a few drops of gas to spare.

Two others top the 600-mile mark:

- Cadillac Brougham, 625 miles per tankful
- Geo Metro XFL, 614.8 mpt.

As a category, large station wagons (Buick Roadmaster, Chevrolet Caprice, Oldsmobile Custom Cruiser), by virtue of their ample fuel tanks (22 gallons) and 25-mpg highway mileage, lead all car sizes in distance capability at 550 miles.

Next at 490 miles are large cars, led by the Cadillac Brougham, whose 25 gallon tank and 25 mpg rating carry it those astounding 625 miles.

Compact cars on average can drive nonstop 481 miles, with Volkswagen Jetta (14.5 gallon tank and 40 mpg) tops at 580 miles.

Then come mid-sized models at 476 miles, topped by the Volvo 960 (21.8 gallon tank and 26 mpg) at 566.8 miles.

Small station wagons came in at 462 miles, led by the Toyota Camry (18.5 gallon tank and 27 mpg).

Subcompacts averaged 450 miles, headed by the industry champ Honda Civic VX hatchback (11.9 gallon tank and 55 mpg), the top-distance performer of all at 654.5 miles.

Mid-sized station wagons averaged 439 miles, paced by the Volkswagen Passat (18.5 gallon tank and 30 mpg) at 555 miles.

The shortest-distance classes, mini-compacts at 438 miles and two-seaters at 430 miles, are paced by Porsche 911 Carrera 2/4's 507.5 miles.

The shortest-trippers of all are:

- Ferrari Mondial t cabriolet, 314.5 miles
- Lotus Elan, 316.2 miles
- Subaru Justy, 340.4 miles.

In the case of the Elan and Justy, their abbreviated range results from small fuel tanks, not low mpg.

The Justy's 9.2 gallon tank is the tiniest of all cars surveyed. The Elan's is 10.2 gallons.

Besides ample fuel tanks, many large and mid-sized cars with long cruising distances have torque-converter lockup mechanisms on their automatic transmissions, which improve fuel economy by eliminating fluid energy losses associated with transmitted power from the engine to the transmission through the torque converter.

Here are some other highs and lows:

- Biggest fuel tanks: Aston Martin Virage, 30.2 gallons; Rolls-Royce and Bentley, 28.5; Ferrari F40 and Lamborghini DB132/Diablo, 26.4.
- Smallest fuel tanks: Subaru Justy, 9.2 gallons; Ford Festiva, 10.0; Lotus Elan, 10.2; Geo Metro LSi convertible, Metro XFL, Suzuki Swift and Daihatsu Charade, 10.6.
- Best highway mileage: Geo Metro XFL, 58 mpg; Honda Civic VX hatchback, 55 mpg; Suzuki Swift, 50 mpg.
- Worst highway mileage: Bentley, Rolls-Royce and Lamborghini, 14 mpg.

As for the football frantic Peters, they buy big cars with big fuel tanks because they love long-haul driving without gas station interruptions. What does the future hold for car owners like them in the near future as tougher pollution laws, new power sources and alternative fuels become part of the motoring scene?

First, let's take a look back. In the fuel crisis, pump-price hiking days of the 1970s, there were traumatic experiences for owners of cars with little fuel tanks and hungry fuel appetites. Many a Corvette and Mustang owner was stranded on a Sunday when gas stations were closed and the sporty cars couldn't get them home.

Auxiliary gas tanks became required equipment.

There are additional factors these days. Clamor by some in Congress for a 40-mpg CAFE by 2001, along with tougher air pollution regulations, is turning the spotlight on alternatives to gasoline such as methanol, natural gas and electricity.

These alternatives don't offer anywhere near the range of gasoline-powered vehicles. There is little, if any, talk about coming close to the 400 to 600 miles miles per tankful of fuel that many 1992 cars attain.

By the way, the Peters drove to the Super Bowl game over the weekend. But the 700-mile trip from Ohio to Minneapolis was beyond the nonstop capability of their Caprice — and probably their kidneys. They made a pit stop each way.

But wait until next year. A new crop of 1993 model cars. A few more miles per gallon. A bit bigger gas tank. Who knows? Maybe 700 miles won't be all that far out of reach for the long-cruising couple. ☐

Al Fleming is industry editor for Automotive News; statistics were compiled by Colleen Belli, a free-lancer based in Mt. Clemens, Mich.

MILES PER TANKFUL

Lowest ranges fall below 400 miles

1.	Ferrari Mondial t Cabriolet	314.5
2.	Lotus Elan	316.2
3.	Subaru Justy	340.4
4.	Mercury Capri	344.1
5.	Volvo 940 wagon	347.6
6.	Mazda MX-5 Miata	357.0
7.	Alfa Romeo Spider	366.0
8.	Jaguar XJ-S convertible	367.2
9.	Lamborghini Diablo	369.6
10.	BMW 318i convertible	377.0
11.	Chrysler LeBaron	378.0
12.	Mercedes-Benz 500SL	379.8
13.	Isuzu Impulse	384.4
14.	Chrysler LeBaron convertible	392.0
15.	BMW 325i convertible	393.6

Highest ranges [illegible]rpass 500 miles

1.	Honda Civic VX hatchback	654.5
2.	Cadillac Brougham	625.0
3.	Geo Metro XFi	614.8
4.	Chevrolet Caprice	598.0
5.	Volkswagen Jetta	580.0
6.	Buick Roadmaster	575.0
7.	Mercedes-Benz 300D Turbo	573.5

AMATI

New luxury cars get sporty image

continued from PAGE 3

at a time when the industry is retrenching somewhat from large powerplants, would be lighter than other V-12s on the market, and would be "environmentally friendly."

The engine is expected to be an all-aluminum, 48-valve 4.0-liter unit, created from a pair of 2.0-liter V-6s. The V-6 is used in the new Eunos 500 sedan introduced last week in Japan. It would be fitted in the Amati flagship sedan, code-named LX12, that is expected to debut in a year.

The Amati franchise was announced by Mazda last summer and is due to begin sales in just over two years in the United States — about 4½ years after Lexus and Infiniti debuted.

"Amati will be more sporty, more emotional in design than Lexus," said Asano.

The Amati lineup will consist of a full-sized and mid-range sedan. He said there are no plans at the moment for a coupe to compete with the Lexus SC400.

Asano said the new 179-inch long Eunos 500 will not come to the United States as an Amati model because, he said, the U.S. market is already overcrowded.

The Eunos 500, which was unveiled at last fall's Tokyo Motor Show as a concept car, goes on sale in Japan Feb. 1 through Mazda's Eunos channel.

Sales are targeted at 2,000 units per month in Japan. AN

The Amati lineup will consist of a full-sized and mid-range sedan.

ISUZU

Ads for new Trooper focus on lifestyles

continued from PAGE 3

shared with General Motors, possibly by 1995.

In the meantime, Isuzu's national focus will be aimed at the new Trooper.

"The Trooper is our opportunity to reposition Isuzu in consumers' minds," says Dick Gillmore, director of marketing. "Right now, we don't have a good image or a bad image. (Former advertising pitchman) Joe Isuzu gave us a lot of awareness, but not a lot of intenders.

"Now we've got a clean sheet of paper."

Gillmore says the new image will be more upscale, more intelligent. With Joe Isuzu gone, ads for the Trooper will focus on how the vehicle fits into a customer's life, "like the family pet," he says.

Print ads for the Trooper will be based on the "unwritten laws of driving." In one example, the headline reads, "If there's a hole in the road, you will find it," as it shows a Trooper commuting through city streets. The point, Gillmore says, is to show that the Trooper's four-wheel-drive capability and suspension come in handy whether or not you go off-roading.

Gillmore says research showed that prospective Trooper buyers will use their Troopers more for zipping across town to pick up dry-cleaning, Little Leaguers and co-workers than for wild off-road adventures.

San Francisco-based agency Goodby, Berlin & Silverstein was hired last summer, replacing Della, Femina, McNamee, creater of Joe Isuzu.

The first work from the agency, a retail campaign for the Rodeo, broke last week.

Jerry O'Connor, vice president of marketing, says the new Trooper will also speak to a new group of buyers. While final prices haven't been announced, the new models will begin at about $18,000 and sell for $28,000 fully loaded, the company says. The 1991 Trooper started at about $14,000.

O'Connor says buyers typically will be married and in their late 30s to early 40s, with a $60,000 annual income.

"For some people there will be a pretty big jump if they bought the Trooper back in 1985 or 1986," says O'Connor. "It's our job to convince them to make the leap." AN

New Trooper is bigger, brawnier

KRISTINE STIVEN BREESE
Staff Reporter

OJAI, Calif. — To hear Isuzu designers tell it, the 1992 Trooper is the Swiss army knife of sport-utilities.

INTRO-'92 UNITED STATES

In developing the vehicle, product planners seized on images of classic and enduring designs such as the Swiss army knife, a diver's watch, a London Fog trench coat and a Zippo lighter to inspire solid and simple design ideas.

What emerged from their labors is the second-generation Trooper. It is bigger, more powerful and more solid than the Trooper that first hit the market in 1984.

Isuzu says the biggest criticism of the old Trooper was lack of power. So the biggest change was made under the hood.

The 1992 Trooper has a new 3.2-liter V-6 engine, replacing the 2.6-liter four-cylinder and 2.8-liter V-6 powerplants in the old line. Both 1992 trim levels have the V-6. The base model uses a single-overhead camshaft unit, and the high-trim version has a double-overhead-cam configuration.

The entry-level Trooper S model develops 175 horsepower at 5,200 rpm and produces 188 pounds-feet of torque at 4,000 rpm. The engine in the LS generates 190 hp at 5,600 rpm and and 195 pounds-feet of torque at 3,800 rpm.

Designers purposely gave the new Trooper a strong family resemblance to the old model.

Both models have standard two-speed, part-time four-wheel-drive. The system is similar to that of the old Trooper but now includes automatic locking hub, which enables the driver to shift in and out of 4wd without leaving the vehicle.

But unlike such "shift-on-the-fly" competitors as the Ford Explorer and Mitsubishi Montero, the Trooper must be brought to a stop before being shifted into 4wd.

While its more rounded appearance helps distinguish the new Trooper from the old one, Isuzu designed in a lot of "family resemblance" to the old Trooper and other Isuzu truck products, according to Mark Darling, director of strategic planning at American Isuzu Motors Inc.

"We didn't want it to look like something from Nissan or Toyota," he said.

To take away the tinny feel of the old product, Isuzu improved the suspension, upgraded the seats and thickened the door panels to reduce road noise. The rear suspension now has a four-link coil spring system intended to improve shock absorption. The old system operated with two, non-coil springs.

In addition, the frame was redesigned to give it a 300 percent increase in overall structural rigidity, Isuzu said.

The wheelbase has grown from 104.3 to 108.7 inches, and length has increased from 176 inches to 178.9. The new Trooper is also 3.7 inches wider and 1.1 inches taller than its predecessor.

Isuzu won't have power seats, leather interior or a sunroof on the first models, but all are under development.

The 1992 Trooper will go on sale in early March. Prices will begin at about $18,000 and top out at $28,000 fully loaded. Isuzu hopes to sell 16,000 this year and 30,000 a year eventually. AN

CHRYSLER

Bond services, Wall St. at odds

continued from PAGE 3

corporation's liquidity."

Chrysler had $2.5 billion in cash at the end of the third quarter. The company had hoped to avert any further lowering of its ratings when it raised $395 million in a common stock offering in September 1991.

Chrysler last week said it was "extremely disappointed" by the downgrades. The company acknowledged the dismal U.S. market and the competition its products face, but termed the downgrades unjustified.

The Fitch downgrade affects securities issued by Chrysler Corp.; Chrysler Financial Corp., its financial services subsidiary, and the Auburn Hills Trust Guaranteed Exchangeable Certificates used to finance the company's new technology center in Auburn Hills, Mich.

The Moody's downgrade affects the debt of Chrysler and Chrysler Financial.

Because Chrysler Financial's rating is linked to that of its corporate parent, the downgradings during the past year have restricted Chrysler Financial's access to commercial paper and have raised its borrowing costs.

"Deterioration in Chrysler's credit quality has adversely affected Chrysler Financial's financial flexibility," said Standard & Poor's. Chrysler Financial "has been unable to access the public debt and commercial paper markets since mid-1990, relying instead for its funding requirements on increased levels of receivable sales and borrowings under bank credit facilities, while curtailing the growth of certain of its non-automotive businesses."

In a prospectus filed with the Securities & Exchange Commission in connection with its common stock offering, Chrysler said that Chrysler Financial's difficulties could become evident by this year.

"Beginning in mid-1992, this reduction of credit would adversely affect Chrysler's fleet sales and its dealers' ability to engage in retail vehicle leasing and would substantially reduce Chrysler Financial's results of operations," Chrysler said in the prospectus.

Chrysler has been unsuccessful in its bid to shore up Chrysler Financial by selling a minority interest in the subsidiary. AN

Porsche pays $14,000 dealer rebate

Porsche Cars North America Inc. is paying dealer incentives of up to $14,000 on 1991 cars, and Hyundai Motor America has announced new consumer rebates on 1991 and 1992 models.

Under the **Porsche** program, dealers who bought at least two Porsche cars out-of-port from Jan. 7-17, will earn up to $14,000 on subsequent sales of 911s and $9,500 on 928s.

The Porsche rebate program runs indefinitely.

Through April 2, **Hyundai** is offering the following retail rebates: 1992 Sonata, $750; 1992 Elantra, $500; 1991 Sonata, $1,500; 1991 Excel, $1,000, and 1991 Scoupe, $750.

Lincoln Town Car, Mark VII, Continental (expires March 3)	$1,500

Pre-1992 models

1990-91 Ford Division models and 1991 Lincoln-Mercury models. Expires Feb. 4. In lieu of rebates, finance rates of 2.9 to 7.9 percent are offered. Finance rates differ by vehicle line and region.

Ford Tempo, Taurus	$400
Taurus SHO	$600
Escort, Mustang, Thunderbird	$750
Festiva, Probe	$1,000
Ranger, F series, Aerostar, Econoline (except E-150 RV)	$400
Aerostar (Northeast), Bronco, Econoline E-150 (RV pkg.)	$1,000
Mercury Topaz, Sable	$400
Tracer, Cougar	$750
Capri	$2,000

GENERAL MOTORS

Expires Feb. 4 unless otherwise noted. Finance rates in lieu of rebates start at 2.9 percent for Buick, Oldsmobile and Pontiac; 6.9 percent for Chevrolet and GMC.

1992 models	
Buick Skylark*	$250-750*
Century, Regal*	$250-1,000*
Riveria	$2,000
Cadillac (expires March 31)	
DeVille, Fleetwood, Brougham	$1,500
Chevrolet Caprice	$1,000
Geo Metro and Storm	$750
Geo Prizm, Camaro, Beretta, Lumina	$500
Cavalier	$500
G van, S/T Blazer, Lumina APV	$1,000
Geo Tracker, Astro, S/T pickup	$750
C/K pickup	$500
GMC G-van, S15 Jimmy (except Typhoon)	$1,000
Sonoma (except Syclone, GT), Safari	$750
Sierra (except Crew Cab)	$500
Oldsmobile Cutlass Ciera (national)	$1,000
Regional programs, various models	$500-2,000
Pontiac Trans Sport	$1,000
Grand Prix	$750
LeMans, Firebird	$500

*Based on option package selected.

1991 models	
Chevrolet Caprice	$1,000
Geo Metro, Camaro	$750
Geo Storm and Prizm, Beretta, Lumina	$500
Cavalier, Corsica	$300
V Blazer, Suburban, G-van, S/T Blazer, Lumina APV	$1,000
Geo Tracker, Astro, S/T pickup, R/V and C/K pickups	$500
GMC V Jimmy, Suburban	$1,500
S15 Jimmy, G-van, Safari	$1,000
Sonoma (except Syclone)	$750
Sierra, R/V pickups	$500
Oldsmobile - regional programs, various models	$500-2,000
Pontiac Trans Sport, LeMans, Firebird	$1,000
Grand Prix	$750

MAZDA (expires Feb. 3)

Protege (1991)	$1,000
Protege (1992)	$500
Navajo (1991)	$1,000

MITSUBISHI (expires Feb. 10)

Precis/Mirage (1990-92)	
Southwest	$500
West	$750
Galant (1990-92)	
West	$750
Pickups (1991-92)	
Southwest	$1,000

SUBARU (expires March 3)

Loyale (1991-92, fwd sedan, awd wagon)	$500
Legacy L, L Plus (1992)	$500

Ford boosts exports of Explorers

KATHY JACKSON
Staff Reporter

Ford Motor Co. plans to export at least 6,000 Ford Explorers to Europe next year, up from the 900 last year.

The company also will establish its first on-site plant homologation center where all necessary modifications will be made before the sport-utilities are shipped. The $500,000 center will be near the Louisville, Ky., assembly plant, which builds the Explorer.

Robert Sparvero, general manager for export sales at Ford, says the company currently exports Explorers to five countries in Europe — Belgium, the Netherlands, Sweden, Finland and Switzerland. Ford also shipped 4,000 Explorers to countries other than Europe last year.

Sparvero said most of the Explorer growth will come from four of the bigger European markets, four large markets that do not use right-hand drive vehicles.

Sparvero says the on-site homologation center will make the modification process quicker and more cost efficient for Ford. He says about 75 percent of the modifications are made on the line at the assembly plant. Workers at the center will add things such as license plate brackets and front and rear tow hooks.

Including Explorer, Ford exported 51,500 vehicles last year, and its export division had revenues of $1 billion. "A billion dollar business is a significant business," Sparvero said.

GM enlists aid of science labs

WARREN, Mich. — General Motors last week hosted 180 representatives of 11 national laboratories for three days of meetings to explore ways the domestic auto industry can use the vast scientific resources of the labs to win what they dubbed the "economic cold war."

More than 1,000 GM employees participated in what is believed to be the first coordinated, cooperative effort between business and the labs.

Initial efforts with the national labs are focusing on energy, the environment, safety, agile manufacturing, manufacturing validation and ultra-reliability, said Donald Runkle, GM vice president of advanced engineering.

Canada dealers study competition

The Federation of Automobile Dealers Associations in Canada has launched a study to look at the competitiveness of Canadian dealers vis-a-vis U.S. dealers.

Ken Graydon, executive vice president of the association, says the purpose of the study is:

- To determine if Canadian dealers can effectively compete with U.S. dealers as the U.S.-Canada Free Trade Agreement makes it easier for consumers to shop on both sides of the border.
- And to examine what impact U.S. program cars will have on the Canadian new-car market when the age restriction on used cars imported into Canada is dropped next year.

Design law supporters begin new campaign

MAX GATES

Staff Reporter

WASHINGTON — Backers of a design copyright law, including the auto industry, will try again to pass legislation that would prevent "knock-offs" of American product designs.

A House subcommittee on intellectual property has scheduled a hearing on the bill for Wednesday.

The bill would provide 10 years of copyright protection for original product designs.

This time, the bill's backers are hoping to broaden support by offering an amendment that restricts the bill's auto industry impact to fenders, hoods and doors.

Cheap imitation parts, many coming from Taiwan and other Pacific Rim nations, often don't have the quality or the fit of original parts, said Anne Carlson, a lobbyist with the Motor Vehicle Manufacturers Association.

Auto insurance companies often force car owners to use these parts in crash repairs to lower costs, Carlson said. But pirated parts "are not only stealing American designs, they are also stealing American jobs," she said.

The Coalition for Competitive Repair Parts and the Coalition for Auto Repair Equity oppose the bill, calling it anti-consumer and anti-competitive.

The opponents say chief beneficiaries of the bill will be large corporations and lawyers. ■

Output up despite holiday

ANNE E. WRIGHT

Chief Statistician

Despite the holiday-shortened work week, estimated U.S. car and truck production rose 9.6 percent over the prior week and 16.6 percent over the year-ago week.

All U.S. assembly plants were closed last Monday in observance of Martin Luther King Day. Estimated car production was up 6.0 percent over the prior week and 11.1 percent over the 1991 week.

Last week's estimated truck production was up 15.8 percent over the prior week and was 26.1 percent over the year-ago week.

Car and truck production in Canada fell 7.7 percent from the prior week but rose 43.0 percent over the same week in 1991.

Canadian carmakers' estimated production last week was 14.7 percent below the prior week but was 6.2 percent above the 1991 week.

Last week's estimated truck production in Canada slipped 1.6 percent from the prior week but topped last year by 93.7 percent.

U.S. and Canadian automakers' daily build rate was 54,538 last week, an increase of 31.8 percent over the prior five-day week. The year-ago work week was also four days with a daily rate of 44,965.

Last week's estimated car production in the United States was split as follows: General Motors, 40.9 percent; Ford Motor Co., 23.0; Chrysler Corp., 10.3 percent; Honda of America Manufacturing Inc., 9.8 percent; Toyota Motor Manufacturing U.S.A. Inc., 4.4 percent; New United Motor Manufacturing Inc., 3.3 percent; Nissan Motor Manufacturing Corp. U.S.A., 2.8 percent; Diamond-Star Motors Corp., 2.7 percent; Mazda Motor Manufacturing (USA) Corp., 1.7 percent and Subaru-Isuzu Automotive Inc., 1.1 percent.

GM scheduled overtime last Saturday at the Scarborough, Ontario; Oshawa, Ontario, and Baltimore truck facilities. The postal line at the Moraine, Ohio, truck facility was scheduled to work one shift of Saturday overtime.

At GM's Janesville, Wis., truck facility, two shifts of Friday overtime and one shift on Saturday were scheduled last week for all lines except the medium-duty truck line, which was scheduled for just one shift on Saturday.

The company extended the downtime for one week on the Allante line at the Detroit-Hamtramck, Mich., plant. Production is scheduled to resume Feb. 10.

Ford scheduled daily and Saturday overtime last week at the Louisville, Ky., and Kansas City, Mo. truck plants.

Chrysler's St. Louis plant in Fenton, Mo., was scheduled to work three shifts of overtime last Saturday. The Dodge City (Warren, Mich.) truck facility worked daily overtime in addition to two shifts on Saturday.

Chrysler's Toledo, Ohio, Jeep facility was scheduled to work five hours of overtime last Saturday to make up production that was lost due to a heavy snowfall the previous week. ■

Ford sells computer unit

DEARBORN, Mich. — Ford Motor Co. last Friday finalized the sale of its dealer computer services department to Houston-based Universal Computer Systems Inc. The price was not disclosed.

The 230 Ford employees will become employees of a new Universal Computer Systems subsidiary named Ford Dealer Computer Services.

The computer company provides systems to the majority of Ford and Lincoln-Mercury dealers.

Fight disrupts GM union vote

Union members are squabbling at two General Motors plants in Oshawa, Ontario, that have been marked for possible closing under the automaker's downsizing plan.

A vote for plant chairperson at Canadian Auto Workers Local 222 had pitted hard-liner incumbent Tom Hoar against challenger John Caines. Caines, who favors a more flexible approach to management, was ahead by 27 votes (4,660-4,633) with 200 ballots yet to be tallied Jan. 25 when the counting erupted into a fracas. Police were called and the ballot boxes were sealed. Caines now wants an independent auditor to conduct the final count.

The quality of a plant's

Parts markup is hot issue

GM may up warranty pay before NADA convention

KATHY JACKSON
Staff Reporter

An anxiously awaited announcement from General Motors could set the industry standard for the way Big 3 dealers are paid for parts used in their warranty work.

Frank Anderson Jr., president of the National Automobile Dealers Association, confirms that GM is studying ways to increase the markup the company pays to dealers for warranty parts work and that GM may make the decision before the NADA convention, which begins Saturday in Dallas.

GM spokeswoman Kathy Bommarito said she could not comment on any plans GM may have to change its warranty reimbursement programs.

But a GM executive, who did not want to be identified, said GM plans to increase the markup from 30 percent to 40 percent this year and add 5 percentage points in 1993 and 1994 to bring the rate up to 50 percent.

"We've got to do it," the GM executive said. "The Japanese manufacturers are putting the pressure on us to do it" because they pay at retail.

GM, Ford Motor Co. and Chrysler Corp. currently pay their dealers cost plus 30 percent for warranty parts. Dealers want the retail rate, which averages about 54 percent.

Anderson said dealers are losing an average of $63,000 per year in parts sales because of the lower markup.

"We don't believe dealers should subsidize the manufacturer's warranty," Anderson said, "but we are doing that."

Ford says it has no plans to change.

BMW scouts S. Carolina for possible plant sites

JIM HENRY and DIANA KURYLKO
Staff Reporters

BMW AG sent Anderson County, S.C., into orbit last week by conducting a feasibility study for a possible North American assembly plant there.

BMW downplayed the excitement in South Carolina, asserting that the company routinely visits communities all over the world in case BMW ever decides to produce outside Germany.

But BMW Chairman Eberhard von Kuenheim has complained about the high cost of manufacturing in Germany.

"This is routine work that we do year after year after year," said Karl Gerlinger, president and chief executive officer of BMW of North America.

"We go to a community and we look at the universities, and the

Costs in Japan

TOKYO — When hrysler Corp. Chairman ee Iacocca complains bout the price of a Jeep herokee in Japan, he is ot alone. The Japanese ealers who have to sell em say the same thing, nd they tend to blame hrysler.

Iacocca says the Chero- ee sells for $12,000 more Japan than in the United States, and he ttributes the difference to a "maze of red pe" and difficulty in getting certification approval.

The markup for Cherokee is higher than for most other imported vehicles.

Japanese sources say the fault lies as much, or more, with Chrysler's late and therefore costly attempt to set up a dealer network in Japan.

A fully loaded Cherokee Limited version carries a list price of $25,484 (plus $485 destination charge) in the U.S. market. In Japan, it is priced at 5.2 million yen, approximately $40,000.

Chrysler officials offer no explanation of the difference, and Chrysler Japan Sales Ltd., a local distribution channel that handled most of the 1,491 Chrysler sales last year, said information on homologation, certification and transportation costs was "a confidential matter."

Masatsugu Hara, assistant manager for

Porsche slams plans into reverse, will build 'affordable' car

DIANA KURYLKO and JIM HENRY
Staff Reporters

Porsche AG's decision to build a more affordable sports car will draw the legendary German marque back toward the heart of the U.S. sports car market.

The specialty maker announced Jan. 24 that it will build a roadster to be priced well-below its current models. At the same time, Porsche put plans for a top-of-the-line 989 four-seater on ice indefinitely.

The move reverses a strategy that had seen Porsche attempt to compete above the fray with expensive, ultra-exclusive vehicles. But Chairman Arno Bohn acknowledged in a telephone interview Jan. 31 that market had become too limited. Now Porsche will attempt to build volume and revenue by targeting the competition more directly.

"We are close to competing with everyone with this vehicle," he said. Porsche will cap annual production at 30,000 units worldwide in order to preserve exclusivity, Bohn said.

The decision comes amid plunging worldwide sales

J.D. Power, rival favor fast trial

LOS ANGELES — J.D. Power and Associates has asked for an expedited jury trial in its case against rival research firm AutoPacific Group.

J.D. Power alleged in a $1.25 million lawsuit last November that two former employees stole proprietary information before joining AutoPacific. The suit charges that analyst Chris Cedergren and his assistant, Steve Morrison, took documents and software from Power to help them develop a sales forecasting system at AutoPacific.

AutoPacific calls the claims a "naked assertion" and insists that the sales forecast is its own unique product. AutoPacific attorney Wayne Barsky says his client will happily agree to an expedited trial and is anxious "to expose that these claims are a fraud."

The case is before the California Superior Court in Los Angeles County.

Cadillac renews Senior PGA ties

KEY BISCAYNE, Fla. — Cadillac has reached agreement with the Senior PGA Tour on a four-year extension of its sponsorship when its current contract expires this year.

The new deal is worth as much as $22 million, division officials said. Cadillac is in the final year of a three-year, $12 million to $15 million deal with the Senior PGA Tour.

Cadillac will sponsor 74 tour events during the 1993 through 1996 seasons, conducting direct marketing programs involving dealerships in each area where a Cadillac event is held. Cadillac said it sold 4,000 cars as a result of direct marketing activities during the first two years of its involvement with the senior tour.

— Phil Frame

Brits to open DeLorean files

LONDON — British Prime Minister John Major has agreed to release official cabinet papers from 1978 to 1982 relating to the defunct DeLorean Motor Cars Ltd. plant in Northern Ireland.

The decision clears the way for former Prime Minister Margaret Thatcher and 30 other British officials to give testimony for a lawsuit brought by the British government. Thatcher will be deposed either in London or New York, where the suit originated.

The evidence is being sought by Arthur Andersen & Co., which is being sued by the British government. The British government sued the accounting firm, which audited many DeLorean controlled companies, seeking $300 million on a variety of allegations, including violation of the Racketeering Influenced and Corrupt Organizations Act.

Thatcher is being asked about her role in matters involving the DeLorean venture, which collapsed in 1982. Britain invested £84 million in the sports car factory near Belfast, Northern Ireland.

— Ed Wendt

VW to dump UK distributor

LONDON — Volkswagen AG will take over distribution of its VW and Audi vehicles in Great Britain at the end of 1993.

The German manufacturer will not renew its contract with VAG United Kingdom, a subsidiary of Lonrho, an international trading group.

Neither company would comment on the matter. Like other carmakers, Volkswagen AG has been hit by the deep recession in Britain. New-car registrations dropped 23.4 percent in 1991.

— Ed Wendt

UAW supports Mexico strike

WASHINGTON — The UAW sent $15,000 to assist striking Mexican workers in Matamoros, Mexico, many of whom produce parts for the U.S. Big 3.

About 27,000 workers at the foreign-owned *maquiladora* plants could be affected by strikes, called to increase wages 30 percent. Many currently earn less than $1 per hour in wages and benefits.

UAW President Owen Bieber, in a letter to Agapito Gonzalez Cavazos, leader of the *maquiladora* workers, said the UAW supports the workers' struggle for higher wages and better working conditions.

Bieber has loudly opposed the proposed free trade agreement between the United States and Mexico.

3-way program urged for Brazil

SAO PAULO, Brazil — The president of Fiat's subsidiary in Brazil has proposed a three-way agreement that would cut taxes and keep wage and price increases from exceeding the inflation rate.

Pacifico Paoli made the proposal last week at a conference on the future of Brazil's auto industry. The idea is similar to a program in neighboring Argentina where the government has cut taxes, the manufacturers adjust prices only to keep pace with inflation, and the unions cannot strike for wage increases above inflation.

Dorothea Werneck, Brazil's economy secretary, said the proposal is "an alternative."

— Rik Turner

briefly

Cadillac plans 'land yacht'

Cadillac plans to play off its sponsorship of Dennis Connor's *Stars & Stripes* sailboat in the America's Cup race with a special edition Eldorado. Cadillac will build only 1,200 "Stars and Stripes" Eldorados, which will be available March 1 for $34,370 with monochromatic black metallic paint and emblems in the bodyside moldings. Cadillac hopes Connor's boat remains in the America's Cup chase long enough to sell the cars. Connor's boat is losing after the first round-robin in San Diego.

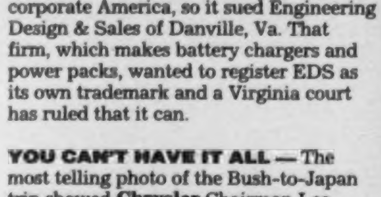
RED INK WRITEOFF — In December, **General Motors** said it contemplated a charge on its balance sheet to account for the closing of 21 plants over the next three years. GM wouldn't say when the charge would occur and said only that it would be less than the $3.3 billion pre-tax write-off it made in the third quarter of 1990 for other plant closings. But in a recent SEC filing for a $750 million offering of a new class of preference stock, GM says it is "more likely than not that the charge will be taken in the fourth quarter of 1991." GM also was a little more definite about the size of the charge, saying it is "expected to be less than $3 billion (pre-tax)."

RECORD WRITER — Retired Tennessee school teacher Buford Bible has bought his 35th consecutive **Chevrolet** from the same dealer. The act has earned him more than the gratitude of **General Motors.** Sen. Jim Sasser, D-Tenn., entered Bible's feat into the Congressional Record, saying, "I challenge all Americans to follow your lead." No response yet from **Ford** — nor Sasser's home-state automaker, **Nissan.**

ROOM FOR TWO — Electronic Data Systems Corp. wanted only one **EDS** in corporate America, so it sued Engineering Design & Sales of Danville, Va. That firm, which makes battery chargers and power packs, wanted to register EDS as its own trademark and a Virginia court has ruled that it can.

YOU CAN'T HAVE IT ALL — The most telling photo of the Bush-to-Japan trip showed **Chrysler** Chairman Lee Iacocca leaning back from the table, arms crossed and lips tight. Back in Detroit, he blasted the Japanese for their automotive trade surplus. But isn't Chrysler the biggest stockholder in **Mitsubishi Motor Co.?** And didn't Chrysler sell 64,447 cars imported from Japan last year? We asked a Mitsubishi public relations exec how the companies are getting along: "Aside from Lee Iacocca, we have a very good relationship."

LAST LAUGH — It's not always easy to practice what you preach. Just ask dealer Richard "Buck" Wheat, who relays this anecdote from his Gloucester **Toyota** in Virginia: A mother checks out the MR2 that her daughter wants to buy. But the mother's real goal is to talk her daughter out of buying a foreign car. "I buy American and so should she," announces the woman before getting into her Korean-made **Pontiac** LeMáns.

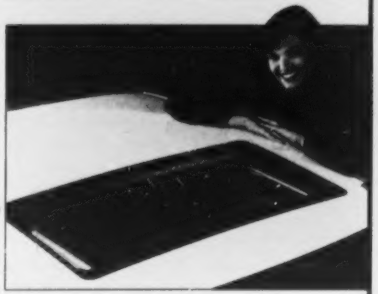


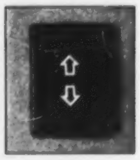
Pontiac LeMans owner: I buy American

The Sky-Top TWEX™ Power Moonroof

The Smart Touch

SIMPLER, SAFER, for your customer. More profits for YOU.





Simpler. One rocker switch for one-touch open, one-touch close, touch-sense and open/close/vent. Ignition-off auto-close with safety time-delay for parking ventilation and constant-touch override for full operator control.

Safety: a major concern of car buyers. The Two-Way Express (TWEX™) sliding panel system safely reverses with no more force than is required to open an elevator door. Compare TWEX™ to another system which may require 50 percent greater force to trigger auto-reverse.

More reliable. Our new 20/20® V/S® mechanical components are the result of over 20 years of sunroof experience — backed by the best warranty in the business. Five sizes assure proper fit. No other company can say that.

Only Sky-Top has it all.

Ask about TWEX™ for power windows, too.

Ford notes rise in demand for Econoline conversions

JOSEPH BOHN
Truck Editor

Demand for Ford Division's Econoline has been picking up in the van conversion and commercial fleet markets, according to Jerome Mittman, Ford Division RV sales manager.

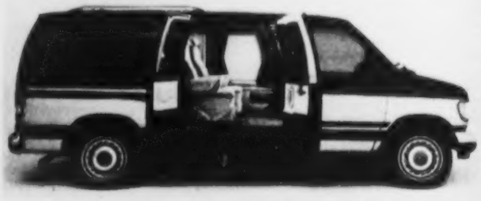
"There hasn't been a great surge of new orders, but the trend indicates that we hit bottom at the end of the year, and things are starting to improve," Mittman said. Ford, in fact, is buoyed enough by the outlook to cancel some downtime on Econoline production it had planned for March, Mittman said.

The company has been stimulating Econoline van conversion sales with a $1,000 consumer rebate and a free floorplanning offer for dealers. Dealers have until March 3 to stock, order or have reassigned to them from a consignment pool company Econoline conversions, which qualify for 150 days' free floorplanning. That includes the standard 60 days, plus an additional 90 days provided by the program.

The floorplan assistance program covers both the E-150 chassis used by converters and the E-350 cutaways used to produce commercial vehicles. The $1,000 rebate, covering 1990, 1991 and 1992 Econoline conversions, ends Feb. 4.

Ford is continuing to tighten requirements for non-pool converters. Currently, its RV prep packages on the E-150 and Aerostar van chassis are available only to pool accounts or non-pool converters with approved drop-ship arrangements. As the year goes on, non-pool converters will have to meet the same quality or customer satisfaction requirements as pool accounts.

Small firms may be exempt from some of the financial requirements that pool companies have to meet.



Glaval's Universal, based on the 1992 Ford Econoline

Even so, the list of non-pool converters is expected to shrink dramatically. Ford has about 70 non-pool converters that have received drop shipments of 1992 vans. More than half of those companies had converted fewer than five units as of early January. Mittman envisions only 20 to 25 non-pool converters by the 1993 model year, excluding those that do conversions for the handicapped. Ford will continue with a less restrictive policy for that type of converter.

But Mittman expects that most of the other non-pool converters will either join the list or, if they're too small, will be cut off. Converters that do less than 25 units a year, for example, may no longer get drop-ship units.

Most of the other non-pool companies are on Ford's pool applicant list and have a good chance of being added anyway, he said.

About 20 to 30 converters work on vans for the handicapped. Mittman said Ford has developed a way of supplying vehicles to them without imposing the same restrictions as on other non-pool van converters. AN

Compliance Group signs Canadian firm

JOSEPH BOHN
Truck Editor

The Compliance Group has signed Vantage Vans Inc. of Edmonton, Alberta, and several other Canadian converters as customers for the certified seating and hardware systems it sells.

Canadian firms typically do both Class B van campers and regular van conversions.

There are about 14 converters in Canada, most of them fairly small by U.S. standards.

Vantage Vans Inc. of Edmonton, Alberta, one of the larger ones, converts about 500 to 600 vans a year, according to Allen Swenson, president of the Compliance Group in Milwaukee.

In last year's down market, Canada only produced about 5,000 to 7,000 van conversions, compared with an estimated 130,000 units converted in the United States.

Swenson said he was very impressed by the Canadian government's expertise in testing van conversions for compliance to that country's safety standards.

Canada has requirements similar to U.S. Federal Motor Vehicle Safety Standard 208, which governs occupant protection during crashes.

In the United States, the Compliance Group's business has increased sharply over the past few weeks, as market conditions pick up.

Swenson said his company has expanded its product line to service the various wheelbase lengths that are offered on full-sized and compact General Motors vans, Ford Econolines and Dodge Cararvan C/Vs.

The company also expanded its staff of sales and service representatives, its warehousing facilities in Milwaukee and Elkhart, Wis., and is adding a third facility in Dallas. AN

Japanese makers foresee sales gains in 1992

MARY ANN MASKERY
Staff Reporter

TOKYO — Despite a downturn in 1991, the first in 10 years, Japanese manufacturers are forecasting sales gains for their own companies this year.

Projections for 1992 include the Honda Motor Co. projection of relatively modest growth by — 0.2 percent — a figure in line with anticipated results for the market as a whole.

At the other extreme is Mazda, which expects an 11.5 percent increase in its sales.

Manufacturers expect easier credit and new products to spur sales this year.

Excluding minicars, vehicle sales fell 3.8 percent last year, to 5.74 million, weighed down by a 12.4 percent drop in the mainstream volume segment.

That segment, which is made up of cars between 660 cc and 2.0 liters in engine displacement, was weak all year.

Sales of mini-vehicles, under 660 cc, declined 1.2 percent to 1.78 million as tough new parking regulations eliminated their previous competitive edge.

The top five sellers were:

- Toyota Corolla, 275,019
- Toyota Mark II, 193,282
- Honda Civic, 171,272
- Toyota Crown, 160,536
- Toyota Camry, 152,942.

But luxury car sales surged 42 percent for the year, to 663,610, as buyers continued to favor the many new entries in that class.

Even in December, sales of the large cars were up 38.5 percent, to 69,581, even though overall sales dropped 8.5 percent, to 423,825.

Only Mitsubishi Motors Corp. and Suzuki Motor Co. reported sales gains for 1991.

Mitsubishi sales jumped 12.6 percent for the year, to 479,799. The gain in a down market pushed its market share up 1.2 points to 8.3 percent, giving the company a lock on the No. 3 sales spot behind Toyota and Nissan.

Suzuki, primarily a minicar maker, also showed an increase in its non-mini sales, reporting an 18.6 percent gain to 45,580 units.

All other makers reported losses.

Toyota Motor Corp. sales fell 5.9 percent, to 2.35 million; Nissan Motor Co. Ltd. fell 4.2 percent to 1.34 million; Honda was down 1.7 percent, to 436,326, and Mazda, which has the most optimistic forecast for 1992, was down 5.8 percent last year to 474,069.

Toyota's market share was off 1.0 points for the year, to 40.9 percent. Nissan's share remained the same at 23.4 percent, Mitsubishi rose to 8.3 percent, Mazda fell 0.2 points to 8.2 percent, Honda climbed 0.1 points to 7.5 percent.

Isuzu Motors Limited was up 0.1 points to 3.3 percent, Fuji Heavy Industries, maker of Subaru, held steady at 1.4 percent, Suzuki up 0.1 points to 0.7 percent, Daihatsu Motor Co., down 0.2 points to 0.6 percent.

Imports fell 10.7 percent for the year, to 199,922 units. German marques plunged 14.4 percent, to 119,048.

General Motors sales rose 8.8 percent for the year to 9,261. Chrysler Corp. was up 4.1 percent, to 1,491, but Ford Motor Co. plunged 50.9 percent, to 2,959.

The Big 3's combined sales fell 16.5 percent to 13,711 units.

Honda was the biggest American importer. Sales of its Ohio-built Accords rose 89.8 percent in 1991, to 14,302. ■

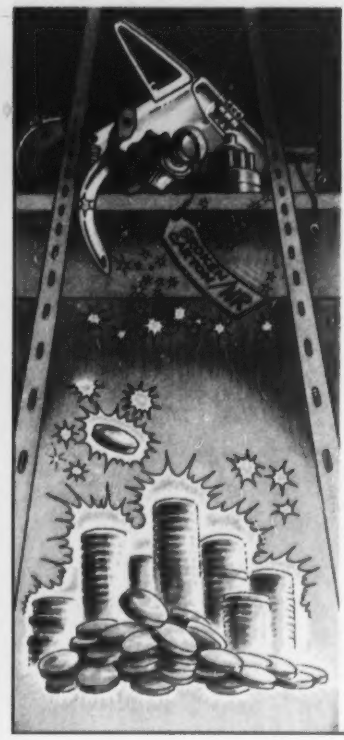
Turn Dust into GOLD!



Turning your non-returnable dusty old parts into cash is easy.

Just sell them through PartsVoice, the nation's largest independent parts locator service (listing 2,000+ dealer inventories).

With any touch-tone phone, dealers can locate parts FREE!

Try it yourself: simply call toll-free 1-800-328-8766 and use 88 + telephone area code as your password. Parts buyers will call PartsVoice over 1,500,000 times in 1992.

They could be buying parts in your inventory. Call us today, and watch your 1992 parts sales grow.

THE ECO*LOGICAL* SOLUTION TO WASTE OIL STORAGE

Double-walled Waste Oil Recovery Systems
MODEL 500DW
MODEL 2400W LIL' SUCKER

FEATURES
- U.L. #142 LISTED TANK-IN-A-TANK CONSTRUCTION FOR BUILT-IN SECONDARY CONTAINMENT
- DESIGNED & BUILT IN ACCORDANCE TO UNIFORM FIRE CODE & N.F.P.A. 30
- AUTOMATIC OVERFLOW SHUT OFF
- AIR-OPERATED PUMPING SYSTEM
- DRAINS PORTABLE UNITS IN ABOUT ONE MINUTE
- 240, 300, 500, 1,000 GALLON STORAGE CAPACITIES

Anyway you look at it, underground storage tanks are environmentally and economically prohibitive. A leaky tank can create an enormous financial liability to it's owner as well as a detriment to the environment. For instance, one gallon of used oil leaking from an underground tank can contaminate one million gallons of ground water — a years supply for 50 people!

Our above ground storage systems for used oil and related waste products, have been designed specifically in accordance to Uniform Fire Codes and the NFPA 30 for flammable and combustible fluids.

The Agape Waste Oil Recovery Systems have gained recognition and acceptance with service stations and car dealers nationwide!

Our systems are hassle-free. Agape has engineered and developed this vertical, free-standing system for years of dependable, maintenance-free operation. Simple instructions show you how easy it is to set up and connect into any air supply. No electrical connections necessary!

If you'd like to find out more about the advantages of above ground waste storage, call our toll-free number at 800-383-9148 and speak to one of our representatives or to receive your free brochure!

German makes waning

TOKYO — German marques, resting on a mystique of engineering superiority, have dominated Japan's import segment for decades. Inevitably, their marketing performance is frequently held up to U.S. carmakers as an example of how to do business in Japan.

To some observers, however, the German nameplates have had their day in Japan.

German sales fell 14.4 percent last year, outpacing the 10.7 percent drop in the overall import segment. And they're not likely to regain their prominence, according to analyst Steven Usher of Kleinwort Benson, International.

"The prestige factor has gone the way of the 'bubble' economy," Usher says. "The nameplates have lost their luster."

At this point, he says, the Japanese domestic makers have "filled in the gaps" with their own upscale answers to the German imports.

"There is no longer any segment left uncovered," he says.

Mercedes-Benz remained the top import seller for 1991, but its sales were off 12 percent to 34,187 units. BMW sales declined 7.5 percent to 33,798, and Volkswagen, long the import leader in Japan, was off 17.9 percent to 30,195 units.

Sales for VW's Audi unit fell 13.9 percent, to 14,367 units.

China, Taiwan post double-digit gains

STEPHEN VINES
Staff Correspondent

China's National Automotive Corp. estimates that the nation's vehicle production rose 36 percent to 690,000 units last year. Sales rose 15 percent in Taiwan.

In China's state controlled society, production and sales are usually on a par. The boost followed the end of the government's austerity program and last year's upturn in the economy.

Although there is no breakdown to show how each sector of the motor vehicle industry performed, generally two-thirds of output comes from the truck sector, and tractors account for a major share.

The most reliable production figures come from the three major foreign joint venture companies that make cars. Beijing Jeep, a partnership with Chrysler Corp., registered a 15 percent rise in production to 48,200 units, 12,000 of which were Cherokee Jeeps, compared with just 7,000 made in 1990. The rest of the output consists of the aging 202N, an all-Chinese multi-purpose truck.

The Shanghai Volkswagen joint venture company, now China's largest car maker, registered a 43 percent rise in production to 35,000 units, most of them Santana sedans.

The Guangzhou Peugeot plant increased production from 5,800 in 1990 to 14,000 units last year. The plant assembles Peugeot 505 cars and pickups.

In Taiwan, passenger-car sales reached 353,846 units as the economy continued to recover from a stock market collapse a year earlier. Locally built cars gained 10 points of market share, to 76 percent, as consumer expectations of a drop in import tariffs kept them waiting. The cut, approved in December, is expected to buoy import sales this year.

Leading manufacturers, and their share, were:

- Ford Lio Ho, 30 percent
- Yue Loong (Nissan), 20 percent
- San Yang (Honda), 14 percent
- Toyota Taiwan, 10.5 percent
- Yue Tien (Peugeot, Daihatsu), 9.4 percent.

Toyota ousted General Motors as the leading importer on a volume of 19,760 units brought in from U.S. factories. Imports from Japan are barred by Taiwanese law.

GM's import volume dipped 47 percent from a year earlier, to 14,500 units, including 2,432 German-built Opels. ■

German sales mask declines in other markets

DIANA T. KURYLKO
Staff Reporter

FRANKFURT — New-car sales in the 17-nation European automotive market rose a meager 0.74 percent last year, to a record 13.53 million, buoyed by record demand from Germany.

But that prop began to slip away after the first quarter, and analysts and industry executives say it will not be a factor again anytime soon.

"Hidden beneath a headline figure of a record 13.5 million sales last year lies the sober realization that many of Europe's car markets have gradually slipped into recession during an otherwise historic year," said Automotive Industry Data Ltd. in Great Britain.

Europe's top five selling models were:

- VW Golf/Jetta, 806,000
- Renault Clio, 628,193
- Ford Escort/Orion, 620,000
- Ford Fiesta, 615,000
- Opel/Vauxhall Kadett/Astra, 583,000.

German sales surged 28 percent in 1991 to 4.19 million units, on the strength of unexpectedly strong demand from the former East Germany.

DRI's Sanjay Dabysing expects German sales to tumble 19 percent this year, to 3.34 million, and increase gradually in 1993 as buyers return to the market to replace the vehicles purchased during the boom years.

The drag will pull European sales down 2.5 percent in 1992, Dabysing said.

Stephen Reitman, who follows the industry for UBS Philips & Drew in London, expects European sales to fall to 12.7 million this year as the German boom ends.

Europe's other major markets were either flat or hit hard.

Recession-stricken Great Britain was down 21 percent; France slipped 12 percent, and Spain was off 10.2 percent. But Italy, the Continent's second biggest market after Germany, recovered in the last quarter to end the year only 0.34 percent lower than 1990.

"The United Kingdom has remained very weak," said Arthur Maher of DRI/Europe in London. "But the market has bottomed out, and the industry is in a situation of debating about the upturn in 1992."

Volkswagen Group, with sales of 2.16 million cars and a 16 percent market share, was Europe's dominant seller again last year, widening the gap over Italy's Fiat Auto, which finished with a 12.8 percent share.

But VW's dominance rested largely on its position in the hot German market. More than half of VW's sales were in Germany, where it had a 28 percent increase over 1990 and a 27 percent share.

Demand from Germany accounted for many other makers' strong performances.

Fiat was again the second largest seller, despite an eroding market share in Italy. Fiat sold 1.73 million cars, down 6.1 percent from a year earlier.

France's Peugeot SA,, which includes Peugeot and Citroen, weathered the French recession and hung on to third place in Europe with sales of 1.61 million cars and a share of 11.9 percent.

General Motors Europe and Ford of Europe swapped fourth and fifth places last year. Ford's sales of 1.61 million (2,800 less than Peugeot SA) secured an 11.9 percent share and the No. 4 spot, while GM's sales of 1.59 million and share of 11.8 percent bumped it to fifth.

But GM is expected to be more profitable than Ford and could report the highest earnings of the six biggest European makers.

John Lawson, an analyst with Nomura Research Institute in London, said he expects that Ford will be Europe's only big-volume manufacturer to lose money in 1992. He said Ford could lose $500 to $1 billion.

Analysts said GM could well beat Ford in volume this year as capacity builds for the new Astra, which was introduced last October. Ford has no significant new product this year.

Nissan Motor Co., the only Japanese manufacturer building cars in Europe, crept past BMW and moved closer to Mercedes-Benz last year in a possible hint of what is to come in Europe as more transplants open and quotas are phased out.

Nissan's 11 percent sales increase, fed by 124,000 cars made in England, helped boost Japanese sales to a record 1.67 million — up 5.3 percent — and a 12.3 percent share of the European market in 1991. In 1990, Japanese sales totaled 1.58 million, an 11.8 percent share.

JEEP PRICE

Japanese dealers blame Chrysler

continued from PAGE 1

business planning at Chrysler Japan Sales, said it would be "impossible" to indicate any pricing breakdown.

The price increase for the Cherokee is two to four times as much as the increases that other importers acknowledge.

FORDS 20 PERCENT HIGHER

Prices on Ford models fall "in a range about 20 percent higher" in Japan, according to a company spokesman, including costs for freight, insurance, customs clearance, certification and distribution and marketing.

A fully equipped 3.0-liter Taurus wagon, including air bags and ABS, has a list price of 3.5 million yen ($27,000). With ABS, dual air bags and destination charge, the Taurus LX wagon base price is $20,442 in the United States.

Ford says its retail prices in Japan "are becoming more and more competitive." Ford, which sold 2,959 units last year, markets its vehicles through Autorama, a channel jointly owned by Ford and Mazda Motor Corp.

The price of a Pontiac Grand Am in Japan is 2.75 million yen (about $22,350 at current rates) compared with $17,500 for a fully loaded model in the United States, according to James Steinhagen, vice president of General Motors Japan Ltd. The difference "is not significant," Steinhagen says. "We price to market."

General Motors vehicles are handled by Yanase & Co., the largest importer in Japan, which sold 9,261 GM units last year, an increase of 8.8 percent in a segment that declined 10.7 percent in 1991. GM is hoping this year to reach 12,000.

BMW, which has invested heavily in an independent distribution system in the Japanese market, and Mercedes-Benz, which is trying to do the same, acknowledge a 10 to 15 percent difference in prices over those in Germany.

HONDA CITES COSTS

The difference for Chrysler, according to industry sources, is that it was late in developing a network, finally tying up with a small Japanese importer three years ago to form Chrysler Japan Sales at a time when land prices had risen astronomically. Industry analysts say the high price on the Cherokee may be a result of Chrysler trying to recoup heavy distribution costs on a very small volume, 1,491 units, through pricing.

Honda Motor Co. also sells Jeeps through its 100 Primo channel outlets, but it "has no control on the import prices," according to a Honda spokesman. Pricing, he said, is done through Chrysler. But that is a problem for the Honda dealers, who complain that the price is "at least 1 million yen ($7,800) too high" to compete with Japanese products. Honda plans to expand Jeep sales to 200 more dealers in the Clio and Verno sales channels.

Compared with the Cherokee's 5.2 million yen tag, a top-line Nissan Pathfinder (Terano in Japan) sells for 2.526 million yen ($19,800) and a comparable fully equipped version sells for $22,925 (plus $300 destination charges) in the United States. A Toyota Land Cruiser sells for 3.7 million yen ($29,100). It is $25,628 (plus about $295 destination charges) in the United States.

Honda dealers sold 437 Jeeps last year during the first year of a tie-up with Chrysler. During President Bush's visit to Japan, Honda pledged to triple that total to 1,200 by 1994. But Honda Managing Director Takashi Matsuda said the target may be difficult to meet without a reduction in price. Honda indicated it will discuss the pricing structure with Chrysler in the future.

JEEP RECALLS A CONCERN

In addition to the pricing difference, Honda dealers are concerned about quality, namely two recalls last year for brake problems.

Yoshioki Shimizu, manager for Honda Primo Jonan, has sold three Jeep Cherokees. He could sell more, he says, "if the vehicle is improved in terms of price and quality."

Customers complain about problems with the electrical system, the paint job and poor fuel efficiency, Shimizu says, and now his salesman "are rather reluctant to actively sell Jeeps."

COSTS OF HOMOLOGATION

Figures are estimated averages of costs to prepare a U.S. car for sale in Japan before distribution costs. U.S. negotiators are challenging some costs.

Accepted:
Some mechanical changes $400-1,200
Red tape and taxes $900
Challenged:
Emissions testing $300
14 mechanical changes $800
Total: $2,400-3,200
Source: Automotive News

Honda President Nobuhiko Kawamoto, when told of Iacocca's statement that the company's quality was good enough to sell worldwide, said "that is probably true. But the message has not gotten through to the consumers."

Kawamoto said Honda would try to help in that respect, but company officials say it will require cooperation from Chrysler. Honda says it has now assigned an engineer to Chrysler Japan on a full-time basis to deal with quality concerns from customers. Honda says it "has no control on quality, but can contribute in regard to service and distribution."

There are definite costs built into the process of modifying and certifying a vehicle for sale in Japan, and U.S. negotiators tried to cut through some of that during the president's visit. But the total extras do not account for a huge markup.

Homologation procedures, in general terms, cost 300,000 yen to 400,000 yen ($2,350 to $3,130), according to representatives of several importers. The estimate includes 50,000 yen to 150,000 yen in costs to make cars ready for Japan's roads — that no one disputes. For instance, headlights must be refocused because cars drive on the left, as in England.

14 SPECIFIC REQUIREMENTS

U.S. negotiators are trying to change Japan's requirements for 14 specific homologation items that cost importers about 100,000 yen. These include such items as side mirrors that snap off easily when coming in contact with a pedestrian. The items have been under discussion between U.S. and Japanese negotiators for 10 years. Officials say "some progress" was made to minimize the changes required during the president's visit.

The Automotive Type Approval Handbook for Certification also lists red tape, tax and paperwork fees that add up to 110,000 yen. That includes 30,000 yen for documents, 10,000 yen for inspection, 12,000 yen for tax, 10,000 yen for gas charges and transportation in moving vehicles through the inspection process, and 48,000 yen for labor. No one suggests that these fees will ever disappear.

Also, there is a 37,000 yen cost for passing emission tests. That point, in particular, irks American negotiators, who argue that California emission standards "are the strictest in the world" and should be accepted in Japan, yet the Japanese government insists vehicles should be retested on a different test mode.

The U.S. test mode adjusts engines for greatest efficiency at high speeds. The Japanese test mode emphasizes lower speeds, which the government says are more common in Japan.

The cost for testing is 277,070 yen for inspection on the first car, 10,300 yen for the second through 10th vehicle, which averages 37,000 yen over 10 units.

A CASE OF DOUBLESPEAK

The issue was debated again during President Bush's visit, with press reports saying the American side was asking the Japanese to change their standards and accept American standards.

Any mention of changing Japan's "standards" is doublespeak to the Japanese people, many of whom believe that their standards on any product are the highest. Even representatives of a Japanese automaker and a Japanese importer, reflecting the popular impression, responded automatically recently when asked about emission standards, stating flatly that Japanese standards were higher than American.

However, California's emission regulations, and in most cases federal regulations as well, are stricter than Japan's in every category.

An American official, familiar with the on-going debate, calls the issue "controversial." The American position is that a vehicle that meets California requirements, using a high-speed test mode, will generally meet Japanese standards, a point confirmed privately by some Japanese engineers.

So far, both sides are moving toward a compromise that will have the EPA learning how to administer the low-speed test mode, so the testing could at least be done in the United States for less cost.

When that move is accomplished, Iacocca will see some reduction in his $12,000 differential — but not much.

Industry needs to fix its image, Steed says

DETROIT — A presidential commission on the auto industry could change the industry's image, according to Diane Steed, president of the Coalition for Vehicle Choice.

In a speech to The Economic Club of Detroit, Steed outlined a six-point program for re-establishing the Big 3's credibility, including the formation of a presidential commission to review "the web of uncoordinated federal regulations from multiple agencies." This, together with the "cost of capital and health care for workers make it difficult for U.S. automakers to compete against foreign companies."

Steed acknowledged the perceived image of the Big 3 of whining and opposing everything — air bags, fuel efficiency and clean air — saying there "is a serious gap between perception and reality concerning the U.S. auto industry."

The Coalition for Vehicle Choice is funded mainly by General Motors, Ford Motor Co. and Chrysler Corp. — *Liz Pinto*

KUME

Nissan chairman speaks his mind

continued from PAGE 3

from each industry, and Shoichiro Toyoda, president of giant Toyota Motor Corp., is already on the board. Toyoda is known for extreme reticence.

Stating frank opinion is a position Kume has advocated not only for himself, but for his employees as well.

When he took over the president's job in 1985, Kume revolutionized Nissan's corporate structure and tore down divisions between management and staff. Once or twice a week, Kume keeps in touch with younger employees by dropping into a local club they frequent.

A former board member describes the "total silence" during meetings of the board of directors prior to Kume, because even directors were reluctant to speak. And a young staffer notes, "I feel free now to express my own opinion."

In some ways, encouraging ideas from below has dampened talk at the top. Kume notes that when he is presented with a final design for a new car, "I refrain from insisting on my own opinion." In fact, he is known for being almost silent unless he feels he has personal experience to contribute.

TRAILBLAZER REPUTATION

Kume has been a trailblazer within his industry as well as his company. He overturned traditional decorum by publicly declaring a market share goal of 30 percent (he now has 23.4 percent), and he specifically targets Nissan models against Toyota competition.

"He is very aggressive," says Nobuyoshi Yoshida, president of the Automotive Business Practice Institute. "His slogan is to fight against Toyota."

The reticent Shoichiro Toyoda "was brought up to be a leader of Toyota," Yoshida says, and that training — presumably more elitist — meant "not saying ill of others."

Kume, on the other hand, began on the production line at Nissan, even though he had graduated from the engineering division of Tokyo University, the top-ranked university in Japan.

Because of his upbringing, Yoshida says, "Kume reveals what he thinks. He never hides. He climbed the ladder to the top without any background."

Colleagues of Kume say he gained their support as he made his way to the top. Yoshida says of Kume, "He is a man of dignified presence."

ROCKY ROAD LIES AHEAD

Kume will be called upon to use his leadership skills at JAMA this year to guide the industry through politically troubled waters as the United States, Japan and Europe engage in intense trade disputes.

The industry is under government pressure to reduce work hours and extend product cycles, not only to ease pressures on labor and natural resources, but also as a means to ease trade friction. As Japan's automotive leader, with 40.9 percent of market, Toyota gets most of the pressure.

If Toyota were to lead, others would follow. But such leadership would restrict its own business, and Toyota has expressed no inclination to do so. That leaves Kume with a difficult challenge.

Both the Japan Auto Workers Union and government agencies have been pressuring the industry to reduce hours more than they have in the past year.

Kume says he is "all for a reduction in hours," but he adds, "It should not be done only on a domestic basis, but on a global perspective." And he stresses that one company cannot make such a move alone without losing out to its rivals.

Extending the product cycle beyond four years is another way to cut overtime, costs and pressure on competitors. During President Bush's visit, Teruhito Tokumoto, president of the Auto Workers Union, issued a statement calling on the Japanese auto industry "to abandon the share-comes-first philosophy."

Again, eyes turn first to Toyota, where Shoichiro Toyoda says a product cycle "cannot be decided by one company alone. We will do what customers want."

Kume, despite his vocal pro-Japanese stance, says his industry should limit its overseas presence.

"We have been turning out products to cater to demand," Kume says, "and that is an appropriate matter for the domestic market, but overseas, it is not right to keep exporting to meet demand. An over-presence overseas is not good."

Kume will be busy trying to resolve inter-company differences. He is expected to be re-elected to lead JAMA this spring, and it's unlikely he could lead JAMA, be Keidanren's vice president, and remain as president of Nissan.

Kume acknowledges thinking about stepping down, turning to reporters who raise the question and with a smile asking, "Do you know how old I am?"

But Kume shows no sign of his 70 years. An ardent amateur photographer, he is known as an unusual Japanese husband, who takes his wife, Aya, on all foreign business trips to share his experiences.

The aggressive leader of Japan's automotive industry is given to introspection in his private time. An inveterate reader of philosophy and Chinese literature, he does not let a day end without reading some passages. His office is piled high with thick files of reference material, which he uses often.

And on his office wall are the writings of a Japanese monk, reminding him: "The rise and fall of a country or company are due to one's own state of mind."

INCENTIVE WATCH— DEALER INCENTIVES

CONTINUING PROGRAMS

ACURA (1991 models, expires May 1)	
Legend sedan	$2,500
Legend coupe	$3,000

BMW

Executives check S. Carolina sites

continued from PAGE 1

payments and the labor.

"But I can definitely tell you we didn't buy anything (in South Carolina). I can't tell you we didn't look at anything," he said.

In Munich, BMW AG said it has been looking into possible production of engines, components and even partial car assembly in the United States because of high production costs in Germany.

South Carolina is "just one alternative, and the U.S. isn't the only place we've looked," said a BMW spokeswoman in a telephone interview.

The local newspapers in South Carolina prominently reported that BMW officials last week visited sites in western South Carolina, near Greenville, Anderson and Clemson, home of Clemson University. Local landowners reported that Anderson County officials had approached them about land prices, but the newspapers reported no sales.

Robert Bosch Corp., a German-based BMW supplier, opened an electronic component plant in Anderson in 1985. Bosch also has two joint-venture facilities in Anderson.

In a fax to its dealers about the South Carolina reports, BMW of North America Inc. acknowledged that BMW is looking at possible U.S. sites, but said the company hasn't made any commitments to build a U.S. plant.

Assembling cars outside Germany would not be new for BMW. The spokeswoman said a BMW factory in South Africa assembles cars with 60 percent South African content.

Last week, von Kuenheim said "social costs" to employers in Europe can be as high as the costs of base salary, while in Japan those social costs are 30 percent.

"New transplants in Europe can generally produce under more favorable start-up conditions," he said in Brussels, where he was speaking as head of the Association of European Automobile Manufacturers. "They typically do not have to carry the accumulated social obligations as the established manufacturers.

"This will most likely place the European manufacturers at a further competitive disadvantage," he said.

He warned that "more energetic steps to prevent further increases in the European manufacturers' cost base" must be taken.

But von Kuenheim stressed that this must not come at the cost of dramatically changing the "standards of income and social security in Europe." AN

Chrysler, Pontiac revise buyer rebates

incentive WATCH

ARLENA SAWYERS
Staff Reporter

Chrysler Corp. and Pontiac revised their consumer rebate programs last week.

Chrysler's program covers 1991 and 1992 cars and trucks and replaces most of the regional rebates announced in December. The exception is in the Northeast, where Chrysler is offering $1,500 on the Chrysler LeBaron sedan, Plymouth Acclaim and Dodge Spirit; everywhere else the rebate is $1,000 on those models.

The payments range from $500 to $1,500 on Chrysler, Dodge, Plymouth and Eagle cars and $500 to $2,000 on Dodge trucks and Jeeps.

In lieu of rebates, consumers may choose cut-rate financing that ranges from 0 percent to 9.9 percent, depending on model and contract length.

The program ends March 31.

Starting Wednesday, **Pontiac** will pay customer rebates of $500 to $750 on 1991 and 1992 vehicles, excluding LeMans. Alternative financing ranging from 2.9 to 8.9 percent is available. The incentives on 1991 models expire May 4; the program on 1992 models expires June 4.

Several incentive programs expired last weekend or will expire early this week.

Programs for **American Honda Motor Co.** and **Nissan Motor Corp. in U.S.A.** expired yesterday and today; expiring today are programs at **Toyota Motor Sales U.S.A. Inc., Mazda Motor of America Inc.** and **American Suzuki Motor Corp.**

General Motors and **Ford Motor Co.** incentives expire tomorrow, except for Cadillac and Lincoln. AN

INCENTIVE WATCH — CUSTOMER INCENTIVES

NEW PROGRAMS

CHRYSLER CORP.	
(Expires March 31. Finance rates in lieu of rebates from zero to 9.9 percent.)	
1991-92 models	
Chrysler New Yorker Fifth Ave., Imperial	$1,500
N.Y. Salon, LeBaron sedan	$1,000
LeBaron coupe, conv.	$500
Dodge Monaco	$1,500
Shadow, Spirit	$1,000
Daytona, Colt 3-dr.	$500
Dodge Ramcharger	$2,000
Ram wagon (van and conversion)	$1,000

Ram 50 pickup	$500
Eagle Premier	$1,500
Talon	$1,000
Summit 3-dr., 4-dr., '92 wagon	$500
Jeep Cherokee	$1,500
Comanche	$750
Wrangler	$500
Plymouth Sundance, Acclaim, Laser	$1,000
Colt 3-dr., '92 Vista	$500
All minivans	$500
Northeast region only:	
LeBaron sedan, Acclaim, Spirit	$1,500
PONTIAC (Feb. 5 to June 4 on 1992 models; Feb. 5 to May 4 on 1991 models. Finance rates in lieu of rebates range from 2.9 to 8.9 percent.)	
Sunbird, Grand Am, Firebird, Bonneville	$500
Grand Prix, Trans Sport	$750
CONTINUING PROGRAMS	
FORD MOTOR CO.	
1992 models	
Expires Feb. 4 unless otherwise noted. In lieu of rebates, finance rates of 2.9 to 7.9 percent are offered. Finance rates differ by vehicle lines and regions. No finance rate incentives on Lincoln models.	
Ford Festiva, Tempo, Taurus	$500
Escort (regional programs)	$500-750
Mustang, Thunderbird	$750
Probe, Taurus SHO, Crown Victoria	$1,000
F series, Aerostar	$500
Ranger	$750
Aerostar (Northeast), Bronco, Econoline (RV pkg.)	$1,000
Mercury Topaz, Sable	$500
Tracer (regional programs)	$500-750
Capri, Cougar	$750
Grand Marquis	$1,000
Lincoln Town Car, Mark VII, Continental (expires March 3)	$1,500
Pre-1992 models	
1990-91 Ford Division models and 1991 Lincoln-Mercury models. Expires Feb. 4. In lieu of rebates, finance rates of 2.9 to 7.9 percent are offered. Finance rates differ by vehicle line and region.	
Ford Tempo, Taurus	$400
Taurus SHO	$600
Escort, Mustang, Thunderbird	$750
Festiva, Probe	$1,000
Ranger, F series, Aerostar, Econoline (except E-150 RV)	$400
Aerostar (Northeast), Bronco, Econoline E-150 (RV pkg.)	$1,000
Mercury Topaz, Sable	$400
Tracer, Cougar	$750
Capri	$2,000
GENERAL MOTORS	
Expires Feb. 4 unless otherwise noted. Finance rates in lieu of rebates start at 2.9 percent for Buick, Oldsmobile and Pontiac; 6.9 percent for Chevrolet and GMC.	
1992 models	
Buick Skylark*	$250-750*
Century, Regal*	$250-1,000*
Riveria	$2,000
Cadillac (expires March 31)	
DeVille, Fleetwood, Brougham	$1,500
Chevrolet Caprice	$1,000
Geo Metro and Storm	$750
Geo Prizm, Camaro, Beretta, Lumina	$500
Cavalier	$500
G van, S/T Blazer, Lumina APV	$1,000
Geo Tracker, Astro, S/T pickup	$750
C/K pickup	$500
GMC G-van, S15 Jimmy (except Typhoon)	$1,000
Sonoma (except Syclone, GT), Safari	$750
Sierra (except Crew Cab)	$500
Oldsmobile Cutlass Ciera (national)	$1,000
Regional programs, various models	$500-2,000
Pontiac Trans Sport	$1,000
Grand Prix	$750
LeMans, Firebird	$500
*Based on option package selected.	
1991 models	
Chevrolet Caprice	$1,000
Geo Metro, Camaro	$750
Geo Storm and Prizm, Beretta, Lumina	$500
Cavalier, Corsica	$300
V Blazer, Suburban, G-van, S/T Blazer, Lumina APV	$1,000
Geo Tracker, Astro, S/T pickup, R/V and C/K pickups	$500
GMC V Jimmy, Suburban	$1,500
S15 Jimmy, G-van, Safari	$1,000
Sonoma (except Syclone)	$750
Sierra, R/V pickups	$500
Oldsmobile - regional programs, various models	$500-2,000
Pontiac Trans Sport, LeMans, Firebird	$1,000
Grand Prix	$750
MAZDA (expires Feb. 3)	
Protege (1991)	$1,000
Protege (1992)	$500
Navajo (1991)	$1,000
MITSUBISHI (expires Feb. 10)	
Precis/Mirage (1990-92)	
Southwest	$500
West	$750
Galant (1990-92)	
West	$750
Pickups (1991-92)	
Southwest	$1,000
SUBARU (expires March 3)	
Loyale (1991-92, fwd sedan, awd wagon)	$500
Legacy L, L Plus (1992)	$500

CHICAGO

Ford, Toyota top the debut news

continued from PAGE 6

room traffic and more positive consumer attitudes reflected in closing rates."

If the enthusiasm dealers are seeing in their showrooms can be turned into sales, the Midwest's biggest show could provide the pivot point for the turn-around some analysts are predicting for the second and third quarters.

Although most of the concept vehicles destined for Chicago have been shown in Tokyo, Los Angeles or Detroit, this will be the first time they are positioned under one roof.

Detroit's crowd, for example, didn't see the 1993 Chrysler Concorde. That model was reserved for the Los Angeles show. Los Angeles didn't see the Chrysler New Yorker — that was saved for Detroit. Likewise, Mazda's redesigned 626 was unveiled at the Tokyo show, but the first U.S. audience will be in Chicago.

Ford Motor Co. is using the Chicago stage to relaunch its struggling Escort and Tracer lines. The redesigned models were introduced in spring 1990 as 1991 models, but sales, especially Escort sales, have failed to match the success of the previous model.

The 1993 Escort will rely on minor cosmetic changes — a restyled front-end treatment, the addition of color-keyed bumpers, and new exterior colors and interior trim.

Similar attention is given to the 1993 Mercury Tracer. Besides new colors, trim treatment and wheel cover designs, all Tracer models will carry the simulated light bar that had been reserved for the front end of the Tracer LTS.

Toyota's executives are expected to use a "built-in-America" theme for the introduction of the Camry wagon. The model will be built in the company's Georgetown, Ky., plant, where the newly redesigned Camry sedan is assembled. A Toyota insider said the wagon is likely to be exported to Asia.

The Chicago audience also will view Subaru's Legacy Touring Sports LE wagon, a new model that has a performance emphasis with handling, anti-lock brakes, all-wheel drive and turbo-engine hardware from the company's existing Legacy Sport Sedan.

Pontiac will unveil what it calls an "enhanced" production model, a concept based on the current Grand Am GT.

Several Pontiac insiders suggest that the division is offering a peek at the platform with exterior tweaks that will eventually become the new GTO, although the vehicle on display will be fitted with a Quad 4 rather than the 3400 multivalve V-6 currently offered in the Grand Prix and likely to be fitted in the GTO.

Enhancements include a citron gold paint job, graphite leather interior upgrade, widened alloy wheels, larger hand-made Goodyear tires, a European-style roof-mounted antennae and a suspension lowered by about four inches.

Bill Scott, chief designer for Pontiac's interior studio, said the decision to transform a production model into a show car just for Chicago was "sort of half marketing and half show business."

"I mean, this is no big investment and we're talking about extremely fast response time. What we have here is something that is very close to what we have on the road." AN

GM replaces Hamtramck plant boss

DETROIT — Loren "Larry" Tibbitts, who had been manager of Cadillac's Detroit-Hamtramck assembly plant since 1988, took an early retirement buyout from General Motors rather than accept reassignment.

The plant assembles the Cadillac Eldorado, Seville, Oldsmobile Toronado and Buick Riviera.

Tibbitts, 54, credited with developing the Hamtramck plant's process that was instrumental in Cadillac winning the 1990 Malcolm Baldrige National Quality Award, was replaced by Herbert Stone, who managed the Wentzville, Mo., assembly plant for the Buick-Oldsmobile-Cadillac Group.

Cadillac said Tibbitts' retirement is effective June 1 and that he's on special assignment until then. But Tibbitts no longer is working at GM and said he is close to landing another job.

Stone reportedly is a disciple of Edward DuCharme, Cadillac's new manufacturing manager, who switched jobs with Roy Roberts, now manufacturing manager at B-O-C's Flint Automotive Division.

Saturn adds day to week

ANNE E. WRIGHT
Chief Statistician

The Saturn Corp. plant in Spring Hill, Tenn., will add a day to its four-day work week beginning Friday. The extended work week is slated to continue throughout the year.

Saturn officials anticipate that customer demand will increase this year as new dealerships open.

Unionized workers at the facility were presented several strategies to increase output, and 89 percent of them chose to add a 10-hour day, according to Saturn spokesman Bill Betts.

Since April 29, the plant's work week has comprised four 10-hour days. Production at that rate would not be adequate to meet the expected demand, according to Saturn officials.

With the additional 10 hours per week, the plant could reach annual output of 240,000. The plant currently produces 850 units per day. Production is scheduled to accelerate and is expected to reach a rate 240,000 by the end of 1992.

Year-to-date, car and truck production in the United States and Canada topped the year-ago total for the first time in nearly 12 months.

So far this year, Canadian car and truck production is ahead of 1991 by 18.6 percent.

U.S. manufacturers have assembled 688,377 vehicles this year, 3.7 percent behind 1991.

Last week's estimated car and truck production in the United States was up 8.5 percent over the prior week — the fourth consecutive weekly increase. Cars were up 5.3 percent, and trucks were up 13.2 percent.

In Canada, estimated car production last week topped the prior week by 23.4 percent and the year-ago week by 32.1 percent. Truck producers' estimated production last week rose 7.3 percent over the prior week and 27.9 percent over the year-ago week.

The daily-build rate was 48,384 units last week, up 13.7 percent over the year-ago week but down 12.2 percent from the prior week.

U.S. and Canadian makers will idle 11 car and four truck plants this week due to slow sales. One year ago, 19 car and truck assembly facilities were idle in response to the Persian Gulf war.

Seven truck plants in the United States and Canada worked overtime last week.

General Motors' Oshawa, Ontario, and Scarborough, Ontario, truck plants worked two shifts of overtime last Saturday. The postal line at the Moraine, Ohio, facility worked one shift last Saturday. And GM's Janesville, Wis., truck plant worked two shifts of overtime last Friday and one shift on Saturday.

Ford Motor Co. ran daily overtime at the Louisville, Ky., and Kansas City, Mo., truck plants last week. The Kansas City facility also worked one shift on Saturday.

Chrysler Corp.'s minivan plant in St. Louis was scheduled to work overtime last Saturday.

Toyota, Nissan eye price hikes

TOKYO — Japan's two biggest carmakers said late Friday they are considering raising prices in the United States, a move that could help defuse trade tensions by cutting export volume.

The presidents of Toyota Motor Corp. and Nissan Motor Co. Ltd. said separately that price hikes are being considered. Japanese executives say that such moves could effectively ease trade friction while leaving the voluntary export restraint ceiling intact and boosting profitability for Japanese carmakers.

Toyota may be first off the mark. President Soichiro Toyoda said that the strengthening yen is prompting the carmaker to consider a price increase.

"It is getting some serious discussion, although I don't think there is a final decision," said a company spokesman.

Nissan President Yutaka Kume, who also is chairman of the Japan Automobile Manufacturers Association, said a price rise is possible. A Nissan spokesman said Kume believes higher prices are preferable to a cut in the export ceiling, a subject of much speculation lately.

According to Kume, current prices of Japanese cars in the United States are "too competitive." A Nissan official said Kume subscribes to the theory recently expressed by Sony Corp. Chairman Akio Morita that Japanese manufacturers must begin asking higher prices for their high-quality goods.

— *Richard Johnson*

Toyota boosts U.S. exports

Toyota will export 45,000 U.S.-made cars to Europe, Japan, Taiwan and Canada this year.

The company will begin shipping Camry wagons made in Georgetown, Ky., to Europe this summer. With them, Toyota will join Honda and Mitsubishi in shipping U.S.-built cars to Europe (see

Lock-step pricing: a myth

Big 3 hikes trailed Japan in mid-'80s

JOHN K. TEAHEN JR.
Senior Editor

In 1983, Ford Motor Co. and Toyota Motor Sales U.S.A. introduced big-volume compacts.

By April 1987, the price of a Toyota Camry had risen 44 percent while the Ford Tempo was up just 22 percent. That pattern was repeated throughout the industry, as Japanese makers coped with restricted imports and a soaring yen.

But at the same time, there arose a persistent charge: that the Big 3 raised car prices as fast as the Japanese while the yen was getting stronger in the mid-1980s.

Second in a series examining allegations in the verbal trade war.

That charge is a fallacy.

An *Automotive News* analysis finds that the Big 3 raised prices only about three-quarters as much as the four leading Japanese makes in the 1982-87 model years. And the Big 3 raised prices far less than the Japanese did in the 1986 model year, when the yen made its biggest leap. Japanese increases were far greater than domestic hikes again in 1987.

Executives from Japanese automakers have often contended that the Big 3, in pursuit of high profits, blew a chance to regain market share by their pricing actions. The charge has been newly repeated in recent weeks as President Bush's trip to Japan with the Big 3 chairmen turned up the heat in the verbal trade war.

In the mid-1980s, the value of the yen nearly doubled against the dollar, rising from 278 to the dollar in October 1982 to 143 in October 1987. That had the effect of making Japanese goods much more expensive in the United States.

The biggest jump was during the 1986 model year, when the yen climbed from 240 to 156 — about 54 percent. Last week, the exchange rate was about 126 yen to the dollar.

The *Automotive News* analysis finds that the price of an average-equipped Big 3 car went up

MITI trying to slow down Toyota

MARY ANN MASKERY
Staff Reporter

TOKYO — Japan's powerful Ministry of International Trade and Industry is pressing a reluctant Toyota Motor Corp. to rein in its expansion plans and become a kinder, gentler competitor.

The issue, which had been widely rumored in Tokyo, surfaced late in January in a highly unusual story in the *Nikkei Weekly,* an English-language version of the financial newspaper, the *Nihon Keizai Shimbun.*

In the article, a "senior ministry official" was quoted as saying that "a 10-year war between MITI and Toyota has started."

Another "high-level official" was quoted saying, "Unless Toyota changes its expansionist policy, Japan itself will die. Unless Toyota changes its management style, the government should change Toyota."

Toyota alone, the article pointed out, accounts for more than 20 percent of Japan's $41 billion trade surplus with the United States.

The report did not appear in the *Nikkei's* Japanese parent, leading industry sources to suggest the story was planted by MITI.

According to those observers, publication of the article only in English permitted MITI's argument to be expressed in stronger, more pointed terms than would be allowed by Japanese syntax. They said that was meant to attract international attention.

Toyota struck back in the next issue with a combative letter from a senior executive, board member Motosuke Tominaga.

"You use the lexicon of war . . . in characterizing Toyota as 'expansionist,' a word that suggests pejoratively a reckless, adversarial posture," he wrote.

"Toyota, like any business enterprise, is commit-

Garcia wins dealer award

DALLAS — Sheilah Garcia, president of Garcia Toyota in Albuquerque, N.M., has been named 1992 Time Magazine Quality Dealer of the Year.

Garcia is the first woman to receive the award since the program's inception in 1970. She will serve as official spokeswoman during the year for all 65 recipients of the Time Magazine Quality Dealer Award.

Garcia

The winners were selected by the University of Michigan Graduate School of Business Administration. Judges selected winners for exceptional performance in their dealerships and distinguished community service.

The award is sponsored by *Time* magazine in cooperation with the National Automobile Dealers Association.

1992 winner Garcia began her automotive

Tracer gets new look for 1993

Lincoln-Mercury used the Chicago auto show to take the wraps off styling changes to the Mercury Tracer. All 1993 Tracers will have new wheel covers and a simulated light bar grille now found on Tracer LTS models. Story and more pictures on Page 6.

A-cars go from quality stinkers to stars

GM crisis teams prompt ixes in design, plants

ACK KEEBLER
aff Reporter

Plant manager Robert Moran responded to ne SOS from a Canadian Oldsmobile dea- ership. An electrical-system problem in a utlass Ciera had turned into a wiring ightmare for the dealer's mechanics.

Moran, who runs General Motors' A-car ssembly plant in Ste. Therese, Quebec, sent team out to examine the car.

The team discovered that the car had been uilt not at Ste. Therese but in Oklahoma ity, Okla. But it fixed the car, and then did omething more important: It passed on its discoveries about faulty wiring to the U.S. plant. The information prompted Oklahoma City to change the way it wires cars on-line.

And thus the A-car line, an ugly duckling of American car quality in the mid-1980s, has become a swan in the quality surveys of the 1990s. The rehabilitation of the A-cars' quality and reputation shows several ways in which GM has improved from an admittedly dismal performance on quality.

The Ciera and its A-car counterparts were rescued in part by a dramatic assault on poor quality known within GM as "The Blitz." But the remarkable transformation depended on hundreds of little changes — in labor relations, car development processes, and better communication among dealers, designers, product engineers, manufacturing engineers and suppliers.

Take the case of the cooperation to eliminate the faulty wiring.

"I've got to tell you, five years ago and definitely 10 years ago that never would have happened," said Fred Schaafsma, platform engineering director for the A-car for General Motors' Chevrolet-Pontiac-Canada Group. "But there are now hundreds and thousands of those things that take place routinely today."

Schaafsma recounted the story of cooperation, fast action and attention to detail.

Even hard-core American-car buyers might be reluctant to believe that a 10-year-old GM design, built in several of the company's lowest-tech assembly plants, has higher quality than the Nissan Maxima or Toyota Cressida. But that was the finding

Ranger redo

Ford is preparing a completely restyled Ranger pickup, expected to bow in summer 1993. The new design's hoodline sweeps down from the base of the windshield to the grille, which has been computer enhanced in this spy photo. Drip rails give way to doors that wrap into the roof. The rear of the cab is extended over the front edge of the cargo box, adding extra headroom. Mazda will receive a version about six months after Ford's introduction.

story on transplant exports, Page 24).

Toyota's planned volume, announced Friday, represents an increase in its U.S. export plans. The company previously said it would export "up to 40,000" units this year. About 18,000 of the exports will be the Camry wagon, produced in both left- and right-hand-drive versions.

The rest of the exports will consist of Camry sedans from Toyota Motor Manufacturing U.S.A. Inc. in Georgetown and Corolla sedans from Toyota's joint venture with General Motors in California. Those models will go exclusively to Taiwan.

Ford cuts 2,100 jobs in Britain

LONDON — Ford of Britain said late Friday it will cut 2,100 jobs this year as part of its "long-term efficiency program." Most of the cuts, about 1,800, will be involuntary.

The latest reductions will cut Ford's British work force to below 40,000. The company has cut employment levels by an average of 2,700 workers a year since 1980, when it had a payroll of 72,000.

Ford of Britain Chairman Ian McAllister said the automaker did not intend to shut any of its plants in the United Kingdom.

Separately, General Motors' Vauxhall unit said it would cut 300 more jobs at its Luton facility, north of London.

— Ed Wendt

GM recalls cars for belt loops

DETROIT — General Motors is recalling about 414,000 cars, in compliance with federal passive restraint requirements, because some were built with cracked front-door shoulder belt guide loops that could pull off in an accident.

The recall involves 1991 coupes: Chevrolet Cavalier and Lumina; Pontiac Sunbird and Grand Prix; Oldsmobile Cutlass Supreme; and Buick Regal, said GM spokesman Jack Dinan.

The supplier of the part estimates that only 2.5 percent of the recalled cars will have the cracking problem, but all will be checked, Dinan said.

If cracks are detected, a reinforcing plate will be installed at no charge to customers.

Porsche recalls 85 new 968s

RENO, Nev. — Porsche Cars North America is recalling 85 Porsche 968 sports cars. The 968 is a new model for 1992.

Through normal testing, Porsche determined that bolts attaching the steering rack to the vehicle may have been stretched through over-torquing in assembly. That may cause the bolts to loosen, affecting the mounting position of the steering rack and causing damage to the rack, less precise steering response or a non-centered steering wheel.

Health care: $1,086 per car

WASHINGTON — President Bush's proposal for national health insurance tax credits was announced a day after auto industry analysts told Congress that health care costs are sapping the industry's ability to compete in international markets.

Health care costs add $1,086 to the cost of the average Big 3 car, according to David Andrea, senior research associate at the University of Michigan. At Chrysler Corp., the cost is about $700 a car, according to Walter Maher, director of federal relations.

— Max Gates

Senate ponders energy proposal

WASHINGTON — The Senate plowed through more than 40 amendments to a 400-page energy bill last week and still had a few dozen to go. Senators expect to resume debate and perhaps vote on the bill when they return from a week-long recess Feb. 18.

The comprehensive energy bill, which has the backing of President Bush, was introduced by Sen. Bennett Johnston, D-La. The Senate rejected the legislation last November. but the new version does not include the two controversial elements — drilling in an Alaskan preserve and new corporate average fuel economy standards. In its present form, the bill would require increased fleet use of alternative-fuel vehicles in more than 120 cities.

— Max Gates

Saturns headed to Taiwan

Saturn Corp. will begin its overseas export program by sending 1992-model sedans and coupes to Taiwan this summer.

The company initially plans to ship 200 to 400 cars a month. A spokesman said Saturn is also studying possible export of its wagon to Taiwan, although that model will not be produced in the 1992 model year.

General Motors of Taiwan will import the SL1 and SL2 sedans and the SC coupe.

Saturn has sold 2,500 cars in Canada since the line became available there last September. The company has announced plans to export to Japan in a few more years.

Opel switches distributor

FRANKFURT — Adam Opel AG, General Motors' German subsidiary, said Friday it is negotiating to switch distributors in Japan.

Opel said it has not been satisfied with Isuzu Motors Ltd. and Toho Motors Corp., a nationwide dealership, and plans to appoint Yanase & Co. sole importer and distributor in Japan starting in 1993.

Yanase distributes GM's U.S.-built cars. Opel said selected Isuzu and Toho Motors dealers may continue to sell Opels.

Opel said its sales in Japan totaled 2,725 units last year.

— Diana T. Kurylko

briefly

Hyundai dealer dials up disaster

An auto dealer has had to explain why 1,000 customers were set up with a telephone sex line instead of a mechanic to fix their defective **Hyundai** Excels. Someone at Freehold Auto Group in Freehold, N.J., goofed when they typed a recall letter suggesting owners of 1986, 1987 and 1989 Excels call an 800-number to make an appointment for free replacement of valves that could be corroding. The Associated Press reported that the number in the notice directed callers to a 900-number sex line. "We tried to do a good thing by sending out those letters to alert the customers to the recall," said Sal Hernandez, dealership service manager. "A good thing is turning into a nightmare." Customers seemed to take the mistake good-naturedly, he said. The dealership sent an apology letter with the correct 800-number.

TONGUE TIED — Warning: Referring to employees as "over the hill" or "fat and 40" will not win you any points with a judge in an age discrimination case. So advises the Missouri Automobile Dealers Association in a bulletin issued to members, cautioning them to avoid phrases such as "you can't teach an old dog new tricks." Point in case — a St. Louis dealership filed for bankruptcy after losing an age discrimination suit filed by a terminated employee.

FIFTH ESTATE — Japan's "Big Four" in the United States — **Toyota, Honda, Nissan** and **Mazda** — all have public relations offices in Detroit. Now No. 5 **Mitsubishi** has followed suit. But while the four rivals answer media calls from Detroit's Renaissance Center, the new Mitsubishi Motors America Inc. office is in suburban Southfield, where the company does much of its liaison work with partner **Chrysler Corp.**

CALLING ALL CLASSIC CARS — Vintage car owners can be Olympians by participating in the Drive America fund-raiser, held in conjunction with the March of Dimes' Walk America in April. Drive America, sponsored by **Ford Motor Co.,** invites owners of classic cars to drive the same route as walkers and to collect pledges for their efforts. Ford spokesman Larry Weiss says Ford will present each Drive America participant with an Olympic-style bronze medal, and individual Ford car clubs will establish fund-raising goals for silver and gold medals. Weiss says 850 clubs have signed up to participate so far.

DEAFENING SILENCE — Due to a "lack of response," **Yugo America** canceled its make meeting scheduled for yesterday at the National Automobile Dealers Association convention. Yugo sold 3,092 cars last year, down 51.4 percent.

AMERICAN AS APFEL STRUDEL — Wolfgang Reitzle, head of research and development for **BMW AG,** said his company was concerned that its cars would be lumped together with Japanese cars in the present "Buy American" campaign. Not to worry. The company's sales were up 43 percent in January — enough to erase concerns that "Buy American" might mean "don't buy European."

Reitzle: What, me worry?

A-CAR

GM turns problem car into quality survey star

continued from PAGE 1

in a 1991 J.D. Power and Associates New Car Initial Quality Study. In the "upper middle" segment, the Pontiac 6000 was quality rated above those high-quality Japanese cars. Two other A-cars, the Oldsmobile Cutlass Ciera and the Buick Century, slipped in just behind the Cressida but ahead of the Infiniti G20 and Nissan Maxima.

It was a dramatic turnaround. So dismal was A-car quality in the mid-1980s that an A-car plant was held up as a prime example of horrible American manufacturing in the influential 1990 book *The Machine That Changed the World.*

Launching 'The Blitz'

GM insiders say the seed for the turnaround was sown in late 1985 when the company launched an all-out attack on A-car quality problems. It was The Blitz.

That effort was originally aimed at dealership service problems — if the cars break, GM will fix them. But it turned an acknowledged quality disaster into one of the highest quality vehicles in the American market. The A-car platform variations at the time consisted of the Ciera and Century and the now-discontinued Pontiac 6000 and Chevrolet Celebrity.

The Blitz, spoken of in almost reverential tones, was given massive funding. Its managers had enormous latitude in implementation in order to speed the program's effect. Its "empowered" foot soldiers were groups of engineers who flew around the country fixing service problems at the dealerships, determining the root causes, and relaying that information back to the appropriate GM marketing, design, engineering or manufacturing area.

At the same time, GM high-level management had its attention focused on future product programs — including the all-important mid-sized W-platform that was to compete against the newly launched aerodynamic Ford Taurus and Mercury Sable.

Ultimately, the W-cars (Buick Regal, Oldsmobile Cutlass Supreme, Pontiac Grand Prix and Chevrolet Lumina) were to completely replace the similar-sized A-body cars. In the case of Chevrolet and Pontiac, that replacement has already taken place.

So almost by default, lower-level engineers on the A-car were thus empowered to make their own decisions, insiders say. The result of this benign neglect was faster decision-making, which speeded both the cleanup of warranty complaints and the implementation of design changes that quickly improved quality of the A-cars.

GM made internal quality-audit documents available for *Automotive News* review. These internal audits are based on rigorous examinations by expert insiders, who note even the smallest defects. As a result, the audits tend to show significantly higher numbers of defects per 100 vehicles than do consumer surveys such as the J.D. Power Initial Quality Survey.

"From 1987 to 1991, you can see a pretty steep improvement," said Carlisle "Cardy" Davis, platform manager for mid-sized cars and the Corvette for the C-P-C Group. "We were up to 430 problems per 100 vehicles in 1987. And now we're down to 230. But if we go back to 1985, it was a hell of a lot higher. Today, we're about a sixth or a seventh of where we were in 1985. We've passed Taurus, and we're right on top of where Camry and Accord are."

A J.D. Power Initial Quality Survey done in 1987, after improvements were begun on A-cars, showed that the cars had 154 reported problems per 100 vehicles compared to an industry average of 168.

By 1991, the industry average had dropped to 141 problems per 100 vehicles, as reported by their owners. And A-car results beat all but more a few more expensive imports: Pontiac 6000 (78 defects); Century (91 defects); Cutlass Ciera (97 defects).

Fiasco in Framingham

The Machine That Changed The World shook the domestic automakers to their foundations by proclaiming the imminent death of American-influenced mass-production techniques and the ascendency of Japanese-influenced "lean production."

In the book, based on a five-year, $5 million industry study by the Massachusetts Institute of Technology, the authors tagged the GM A-car plant in Framingham, Mass., as "a classic mass-production environment with its many dysfunctions."

The authors repeatedly used the Framingham plant of 1986 as an example of a U.S. factory crippled by mass-production methods that compromised its ability to build low-cost, high-quality cars.

No single "silver bullet" made the change happen. Improvements came in labor relations, engineering and GM's four-phase process of developing and changing cars, according to Buick, Oldsmobile and C-P-C Group managers and directors responsible for publicity, product satisfaction, engineering and manufacturing for the A-car.

But two important events strongly influenced A-car quality. First, Framingham never did regain manufacturing health and was closed in 1989. Second was The Blitz.

"The Blitz did not really improve the quality of the car per se," said Davis of C-P-C. "But it got us thinking and developing a process that ultimately led us to one of the highest quality cars in General Motors."

An important side benefit of The Blitz was that the fast-response engineers rebuilt communication networks that had been severed after GM's 1984 reorganization.

GM managers downplayed Framingham's closure and cited other possibilities for improved A-car quality. They were:

- The "design stability" of the A-platform, which has changed only slightly since it was introduced in 1982
- Strict adherence to the deadlines and contracts of GM's new four-phase development process for changes in the car, which began after the A-car introduction. (See adjoining story.)
- Wider internal distribution of customer-survey material, resulting in a sharper focus on retail-customer needs
- Benign neglect from GM management that empowered low-level managers to make critical decisions.

The positive J.D. Power survey has contributed to a sales surge for the surviving A-cars, the Century and Ciera. Despite their age, these models were the best-selling models at their divisions in 1991.

The Ciera has been Oldsmobile's best-seller annually since 1985. Century was Buick's best seller from 1984 through 1987. But it was bumped by the LeSabre (another J.D. Power quality standout) in 1988, 1989 and 1990.

In December, GM's management committee approved funding for a 1995 redesign for the Century and Ciera.

Closing poor-quality plants is obviously not the best way to improve quality. But closing Framingham unquestionably improved A-car average quality.

Only the Oklahoma City and Ramos Arispe, Mexico, plants still build A-cars. Ste. Therese is already shifting over to build the new F-car: the Pontiac Firebird and Chevrolet Camaro. Another A-car plant, Doraville, Ga., builds the W-car Oldsmobile Cutlass Supreme. Tarrytown, N.Y., now builds front-drive minivans.

JOE WILSSENS/AUTOMOTIVE NEWS

'We just made a decision back then that if we didn't change the way we did business, we knew we wouldn't be around," said Jack Evans, manufacturing manager for C-P-C.

J.W. "Jack" Evans was the plant manager at GM's Oklahoma City plant in 1985. That was when things started to change, he said. He is now overall manufacturing manager for C-P-C.

In 1985, Evans said, GM engineers and suppliers were invited to build A-cars on the Oklahoma City line. Many of the engineers and suppliers were surprised at the difficulty of building complex designs with poor-quality parts. One high-level engineer jokingly described engineers building cars as "an unnatural act."

"But it was no more point-the-finger, beat up or blame people," Evans said. "We knew we had to come together as a team. We just made a decision back then that if we didn't change the way we did business we knew we wouldn't be around.

"Before that, we were just worried about being good enough for General Motors. We weren't worried about being as good as the best — the people you were really competing against."

'Action teams' roll

GM had long had quality problems. GM's traditional way of fixing defect-prone cars was one at a time in the dealership service bay. In the case of the A-car, GM management authorized The Blitz.

The Blitz started in the dealership. But it took the information from the front lines and relayed it back to the factory.

"Action teams" or "A-cat teams" (A-car customer action teams) were formed to "stop the massive bleeding," as one engineer put it. They were to fix retail customer problems and then relay information deep into the organization to eliminate the root causes.

For example, a Florida customer complained of a terrible smell in her A-car on hot days. An A-cat team went to the dealership and stripped out the interior of the car. The various pieces were then subjected to elevated temperatures in the dealership's paint oven. The culprit: formaldehyde, used in the seat foam. Oklahoma City sent the dealer a fresh set of front and rear seats. And the process was changed to eliminate the traces of formaldehyde.

Impressed by the success of the original A-car action teams, other GM platform groups have since created their own "cross-functional" teams to monitor and act on quality and other customer-focus issues.

"Originally, The Blitz and the action teams were a reactionary type of effort," said Bob Schlitt, quality process manager for A-car operations at C-P-C. "But it became increasingly evident that we couldn't continue to function in a reactive way. For one thing, it was expensive. We had to work our way back into the development, design and concept stages to prevent the problems from occurring. That started to get at the lack-of-communication issue. We started to communicate effectively with all the different staff members."

Stable platform aids quality

Practice makes perfect. GM was able to build basically the same car for 10 years, creating an advantage in a quality survey.

But platform engineers point out that even stable vehicles nonetheless receive many engineering upgrades — usually invisible to casual observers.

"Why, probably 20 to 50 percent of the part numbers change every year related to improvements," said Davis of C-P-C. "In terms of content, the current vehicle has very few parts, if any, that were the same as in 1982."

Mary Munkacsy, an Oldsmobile Cutlass Ciera car line engineering manager, offered another theory on the A-car quality turnaround. She called it "adhering to the process" — no longer making late changes to decisions made during the planning or concept phase. Changes made in the late stages of the GM development process might result in poor execution and poor quality. And finally, Munkacsy said, deadlines and contract agreements are met on time.

"You want to bring on the new product without a hitch," she said. "That means all the testing is done by the time you build a prototype. You don't want to be adding changes after prototype. You add changes, then you're missing an opportunity to find problems. If you find the problems earlier, you can fix them earlier. And they never get out. It's getting out of the crisis mode."

"Actually, one of the advantages of the A-car is that it isn't very exciting," said Munkacsy of Oldsmobile. "But it sold. So there was very little managerial interference. In 1985, our division alone was selling over 330,000 a year. So upper management was busy with other things."

The W-cars may have been the "golden child" in the 1985 to 1987 time frame, but the sales success of the unexciting A-car and its high rank on quality surveys now provide a golden halo for the corporation and gold for the corporate coffers.

Four-phase system improves A-cars

Each year, every GM vehicle goes through a development process. The process can range from producing an all-new car to making small improvements, invisible to the consumer, on an existing vehicle.

Although the A-car appears to have changed little since it was introduced in 1982 for the 1983 model year — minor facelifts in the 1985, 1987 and 1989 model years — it has received many changes that stemmed from the regular development process.

GM initiated the four-phase development process in 1987. It was designed to make sure products hit the markets at which they are aimed, progress through the development process on time and are finished within budgets. It also is designed so that engineering, design, manufacturing and marketing work in a coordinated manner.

Virtually every change made to a vehicle, even items seemingly as small as a new body side molding, is subject to GM's Four-Phase Process:

- **In Phase 0, a planning and marketing team decides what the vehicle is going to be and the intended customer.**
- **In Phases 1 and 2, an implementation team, consisting of product development teams, splits the vehicle up into various segments: body exterior, interior, heater-ventilation-air conditioning, powertrain, doors, etc.**

These implementation teams consist of people from marketing, component engineering, plant and manufacturing engineering, purchasing, financial, suppliers and materials management.

By the end of Phase 2, prototypes will have been built.

- **In Phase 3, the assembly plant builds pilot cars on the production line tooling to be used for the vehicle. When the plant is confident it can build cars at consistent quality levels and speed, the project enters Phase 4, production for sale.**

Action teams carefully track early plant, dealer and customer experiences with the new vehicle so adjustments can be made to correct any problems.

Nissan: right-drive Villager unlikely

RICHARD JOHNSON
Staff Reporter

TOKYO — Nissan Motor Co. officials said last week they see no chance of following through with their company's proposal to import a right-hand-drive version of Ford Motor Co.'s new Mercury Villager minivan into Japan.

A right-hand-drive Villager would require a huge investment.

The idea was put forward by Nissan during President Bush's visit to Tokyo last month, one of several proposals to boost imports of American cars. The Japanese government has included the Villagers in the announced goal of increasing imports by 19,000 units a year, even though the proposal was plagued from the start. Ford was not consulted before Nissan made its announcement.

Nissan estimated then that it could sell 3,000 Fords a year in Japan, with about half of that target representing right-hand-drive Villagers.

But Nissan officials now say privately that development of a right-hand-drive version of the Nissan-designed Villager would be impractical because of the enormous costs involved. The vehicle would have to be re-engineered to change the sliding door from the right to left side.

Nissan said it would be willing to cooperate on sales of other Ford passenger cars, such as the Taurus and Taurus station wagon and successor models. But that project must overcome snags because Mazda Motor Corp. is the exclusive importer and dealer of Ford passenger cars in Japan.

Nissan Executive Vice President Yoshikazu Hanawa said Nissan has begun talks with Mazda. But Mazda President Yoshihiro Wada said recently that "the first priority is for Nissan to negotiate with Ford, not Mazda."

Some left-hand-drive Villagers with minor modifications might still be imported, Nissan said.

"We have to think about importing them as they are," Hanawa said last week.

The Villager will begin production April 13 at Ford's plant in Avon Lake, Ohio, alongside Nissan's Quest version.

"We expressed our willingness and good will to sell the Villager in Japan," said a Nissan spokesman. "We are waiting for a response from Ford. If they want to sell it, we think it is for Ford to study the feasibility."

But privately, Nissan officials say they were never enthusiastic about the idea.

"It is not realistic; it is too expensive to change to right-hand-drive," said one executive. "We could possibly import a few with left-hand drive, but the Taurus is more realistic."

A senior Ford executive estimated in Tokyo last month that the necessary changes would cost several hundred million dollars.

The proposal took Ford by surprise last month, and the companies have not discussed it.

It was announced by Nissan against the backdrop of relentless pressure from Japan's Ministry of International Trade and Industry in the days before the Bush visit.

At the time, Nissan laid out a series of requirements it said must be met for the Villager to meet Japanese specifications, including right-hand drive, placement of the sliding door on the left side and competitive pricing.

Transplants boosting exports

About 20,000 cars destined for Japan

LINDSAY CHAPPELL
Staff Reporter

The Japanese transplants will give a big push to U.S. export efforts this year by shipping as many as 40,000 additional U.S.-made cars to overseas markets.

The planned activity serves as an ironic backdrop to last month's U.S. trade mission to Japan, when Big 3 leaders pressed Japan to import more American cars.

The increase will mean that Japanese factories in the United States alone could export a total of 97,000 cars this year, or more than a third of the volume the Big 3 exported last year. Most Big 3 exports go to Canada.

About 20,000 transplant cars will go to Japan — representing nearly two-thirds of all U.S. exports to that market.

The numbers are rising quickly. For example:

- Toyota Motor Manufacturing U.S.A. Inc. will start shipping up to 40,000 Kentucky-made Camry wagons to Japan this year.
- American Honda Motor Co. plans to export about 40,000 U.S.-made Accords and Civics this year. That would be an increase of 13,000 units from 1991.
- Mitsubishi Motor Sales of America Inc. forecasts a 10,000-unit gain in its export of U.S.-made cars this year, treble its 1991 results. Mitsubishi plans to ship 6,000 Eclipses from its Diamond-Star Motors Corp. plant in Normal, Ill., to Germany in the first half of this year, and accelerate exports in the second half. A few four-door Mirages are also slated for export.
- Mazda Motor Manufacturing (U.S.A.) Corp., which produces the Mazda 626 and MX-6 in Flat Rock, Mich., is considering a plan to export those cars, a company spokesman said. The company will build about 15,000 Ford Probes to be sold by Ford Motor Co. in Japan, Britain and Germany.
- Fuji Heavy Industries plans to export about 600 Subaru Legacys to Taiwan in the first half of the year, and about 400 in the second half. The Lafayette, Ind., producer is also studying a plan to ship cars to Europe.

Japanese manufacturers dismiss suggestions that the increasing export business is related to the state of U.S.-Japanese trade relations. In some cases, particularly Honda's, the volumes were targeted years ago. And in other cases, like Mitsubishi's, the exports are headed for Europe rather than Japan.

The exports do help keep plants busy. Mazda has been operating under capacity for the past two years as sales of its aging products waned. Diamond-Star has never operated at more than 70 percent of its 240,000-unit capacity, and until new products are introduced there in late 1993, U.S. demand isn't likely to climb.

Yet export markets have not been solid gold. Despite Honda's aggressive posture on exporting, the company is far behind its 1988 long-range target of capturing 70,000 exports by 1991. The company blames sluggish auto markets around the globe.

"It is a struggle," said Yo Masuda, Honda's vice president of exports. "All of our key markets, like Japan, have been struggling just like the United States. But we're making progress."

Honda exported 27,000 cars from its two Ohio factories in 1991 — about 14,500 of them to Japan, and most of them Accord station wagons.

A number of its markets have faced industry slumps, including Britain, where sales fell nearly 20 percent last year, and Taiwan, where they fell 10 percent, Masuda said.

Despite the tough environment, the company actually surprised itself last year, exporting 27,000 cars instead of the 22,500 it forecast at the beginning of the year. Similarly, Mitsubishi had forecast about 3,000 sales for 1991 and ended up at about 5,000.

Israel and Germany are both advancing as strong markets for Honda. Last year, the company sold more than 4,000 U.S.-built cars in Israel, capturing nearly 8 percent of the market. This year, Honda plans to sell another 1,000 units there, Masuda said.

Europe offers new growth as the company works toward the 70,000 figure, Masuda said. This year, Honda will add Italy, Portugal, Denmark, Sweden, Norway and Finland to the list of European nations selling its U.S.-built cars.

In the Pacific, Honda will begin shipping the cars to Australia and Hong Kong this year.

The sag in U.S. sales offers the same exporting opportunity to Big 3 carmakers, who also forecast stronger 1992 export sales. Ford's 1991 exports of 51,661 units were 36 percent higher than 1990. General Motors reported a 30 percent increase in 1991 exports, which tipped 130,000 units.

The transplants have a leg up on the Big 3 in exporting to Japan as they roll out right-hand-drive vehicles for their home market. Critics have blamed the Big 3's low sales in Japan on Detroit's unwillingness to put steering wheels on the side consumers want.

Honda has been building right-hand-drive Accords in the United States for two years. Toyota will offer a U.S.-built right-drive Camry this spring. And by the fall, Mazda will produce right-drive versions of the 626, MX-6, and even the Probe. Ford's optimism over Probe exports is largely based on the steering switch.

The Japanese transplants are suited for exports because of their output of "world cars" that hold appeal to markets around the globe. Honda's Accord wagon, which will sell in 10 countries this year, is built exclusively in Marysville, Ohio. The Toyota Camry wagon, which debuts this spring, will be exclusive to Georgetown, Ky. The Mitsubishi Eclipse and Isuzu Rodeo also are built only in the United States.

TRANSPLANT EXPORTS

	1992 planned	1991	Models and destination
Honda	40,000	27,000	Civic to Israel; Accords to Japan, Taiwan, Hong Kong, South Korea, Australia, Britain, France, Spain / Portugal / the Netherlands, Belgium, Germany, Denmark, Sweden / Norway / Finland

Mitsubishi	15,000	5,000	Eclipse, Mirage to Germany
Mazda	1,000	630	MX-6, 626 to Taiwan, Europe, Guam, Puerto Rico
Subaru-Isuzu	1,000	260	Legacy to Taiwan
TOTAL	**97,000**	**56,890**	

Safety group scorns 2½-mph bumpers

WASHINGTON — Weak bumpers on small cars will cost consumers money — up to $3,864 in repairs for a 5-mph crash, says the Insurance Institute for Highway Safety.

The institute tested 24 small two-door models. None of their bumpers completely protected the car from damage, and two-thirds of the cars had more than $2,000 in repairs, the institute said.

The problem, according to the group, is the rollback in federal bumper standards from 5 mph to 2½ mph in 1982.

"The result is flimsy bumper systems, lots of damage in low-speed impacts, high repair costs and wasted time and aggravation to get car repairs completed just because of the kinds of bumps that happen all the time, commonly in parking lots," said Insurance Institute President Brian O'Neill.

— Max Gates

SALES

Totals don't show 'Buy American' bias

continued from PAGE 3

Lexus. Suzuki, which produces in Canada, was up, too.

Mazda, Mitsubishi, Subaru, Isuzu and Daihatsu declined; all but Daihatsu have U.S. plants.

In all, Japanese makes jumped 7.1 percent to 211,428 cars and light trucks. Sales for the U.S. Big 3 were up 2.3 percent, and the Europeans rose, too.

The industrywide gains were in comparison to a 27.7 percent decline in the year-ago month, which included the start of the Persian Gulf war. Truck sales were even worse in 1991, down 32.0 percent.

Late-January sales shored up the monthly total for 1992. In the first 20 days, sales had fallen below even the depressed year-ago figures.

Pochiluk said U.S. union members are probably the strongest Buy American advocates, but they're also one of the groups hardest hit by the recession.

"They're out of the marketplace right now," he said. "They're not buying."

The market share for Japanese makes grew to 24.8 percent in January, up from 24.0 percent a year ago. That included an increase of three percentage points in car share, to 29.9 percent. But their truck share dipped from 17.9 percent to 15.0 percent.

Ford Motor Co. sales rose 7.3 percent, including an 11.5 percent jump in truck sales. Ford's sales were off 31.8 percent in 1991.

Chrysler Corp. sales slipped 2.8 percent, as its car sales fell 23.6 percent. Chrysler said much of the decline was due to a cut in sales of "nearly 20,000" program cars. Its light-truck sales were 21.2 percent above the year-ago month.

General Motors sales edged up 1.0 percent, with car sales down 2.1 percent and truck sales up 8.0 percent. GMC truck sales improved 26.9 percent.

European luxury makes, which last year suffered from the Jan. 1 imposition of the luxury tax on top of the war and the recession, posted large increases.

Mercedes-Benz sales jumped 30.3 percent; BMW sales rose 42.7 percent; and Porsche sales climbed 82.2 percent. ■

Daihatsu offers suite at NADA

Daihatsu America Inc. is among the companies offering a hospitality suite at the National Automobile Dealers Association convention in Dallas.

The Daihatsu suite, for anyone with an NADA badge, will be open in the Loews Anatole Hotel from 2 to 9 p.m. today and from 9 a.m. to 2 p.m. Tuesday, Feb. 11. ■

Why the Japanese say what they say

No insults meant by 'brutal honesty'

MARY ANN MASKERY

Staff Reporter

TOKYO — *Lazy. Illiterate. Lacking in work ethic. Unable to produce quality goods. Second rate . . .*

The jabs coming from Japan in recent weeks have been numerous and unflattering. Even Prime Minister Kiichi Miyazawa, the most international and urbane of Japan's current political leaders and a true friend of the United States, ruminates that Americans don't know how to "sweat" anymore.

Infuriating, the barbs are equally puzzling. Baffled, Americans grope for an answer: *Why are these guys saying these things?*

Simply put — because they believe what they're saying.

"Half of all Japanese workers have the same opinion" as Miyazawa about the American work ethic, says Takashi Inoguchi, professor at Tokyo University.

But, he is quick to stress, no insult is intended by such remarks or opinions. Rather, he says, such remarks are an example of how the Japanese can be unsophisticated in their honesty.

"They were saying what they think" and not thinking of the impact, he says.

To Koichi Shimokawa, professor of business at Hosei University, the recent criticisms have come from "old politicians with old-fashioned thinking."

"I hate it," he says.

But Shimokawa, who has studied American auto plants, says that in his experience, American management practices are indeed a "big problem."

He recalled workers at the Toyota-General Motors joint venture in Fremont, Calif., telling him how much happier they were after Toyota management got involved than they had been when the plant was under GM control.

"Old fashioned labor practices and management systems had kept them from becoming more skillful," he says.

Robert Orr, director of the Stanford Japan Center in Kyoto, agrees that the opinion that American workers are lazy and mismanaged is not the exception in Japan.

"It is highly representative of the way many Japanese think; it is a widely held view," he says.

In a society that still values conformity, where workers typically wear uniform-like garb, this view of U.S. workers is reinforced even by American dress habits, he says.

"From their perspective, they see reports on television of American workers who may be wearing tank tops or football jerseys, or listening to music. To the Japanese, the American workers do not look serious," he says.

That image is then reinforced by repeated stories of shoddy quality in American products.

After President Bush's trip to Japan last month, when Japanese automakers announced plans to help sell more American cars, the press was filled with critical reports on American products.

One report quoted a suggestion that Japan buy the U.S. cars "and use them for land fill."

Another commentator groused that Japanese consumers were being asked to do something Americans will not do — buy American cars.

Still, the Japanese are nothing if not polite. To that extent, the spate of openly stated insults seems wildly out of character — raising again the question of *"Why?"*

In the opinion of Orr and other observers, the reason for the flood of trans-Pacific insults is again simple — the Japanese think they can't be heard.

According to this premise, the Japanese people have been culturally conditioned to believe that their language is impenetrable to foreigners — and that their remarks will never be heard outside the speaker's immediate circle.

"(They) don't seem to understand they don't have a code any more," Orr says. "Foreigners do understand the language, and they are listening." AN

GM plans ad campaign for Cadillac Seville in Japan

TOKYO — General Motors hopes to polish its image in Japan by launching its first extensive TV advertising effort ever — an $8 million campaign breaking in March for the Cadillac Seville.

"Our strategy is to remove the misunderstandings about American cars," said Ichiro Sugita, GM advertising and sales promotion manager in Japan.

"We are going to communicate the quality of GM cars to the Japanese people, especially the Cadillac Seville, which is our flagship," Sugita said.

The GM campaign is designed to persuade skeptical Japanese consumers that the Seville, launched in November, is fully competitive in terms of fuel efficiency, fit and finish Japanese and German luxury marques.

Sugita said spot TV, newspapers, magazines and TV program sponsorships are planned.

The campaign will run for a year, he said.

Spending will depend on how many cars are sold, but the company will spend no less than $8 million.

Total Cadillac sales in Japan last year were about 1,000, mainly Eldorado and Fleetwood models.

"This year we have no specific (sales) target," Sugita said. "We want to sell as many as possible, and we're hoping for a 20 percent to 30 percent increase."

He said that the Toyota Crown and the Nissan Cima are Cadillac's main competitors.

"We are also competing with Mercedes and BMW, but our first competition is the Japanese domestic car," Sugita said. "The European cars are our secondary target."

The Seville sells for $60,000, while the Crown line ranges from about $11,000 to $50,000, and the Nissan Cima sells for $35,000 to $50,000. In January, Toyota sold 18,000 Crowns; Nissan sells about 4,500 Cimas a month. AN

RICES

panese increases tstripped Big 3

inued from PAGE 1

73 from the beginning of the 2 model year to the end of the 7 model year.

he increase for the four leading anese makes sold in this coun- (Toyota, Honda, Nissan and zda) was 28 percent higher: an rage of $4,828.

he difference is much greater n stated another way. *Automo- News* estimates that the price of average-equipped Big 3 car from $10,106 to $13,879 dur- those six model years, an in- se of 37 percent. The average e for the four Japanese makes ped from $7,201 to $12,029, a of 67 percent.

or both domestics and Japanese es, those increases are higher n the total of the annual hikes *ounced* by the companies. That ecause the auto companies fig- their annual boosts on the basis 'comparably equipped cars.'' makers do not include price eases due to the addition of dard equipment.

he figures are sales-weighted each group and include changes standard equipment and nges in the model mix.

ales weighted means that the res reflect the market share of company. The Big 3 increases weighted according to the 3 market share held each year Chrysler Corp., Ford Motor Co. General Motors. The Japanese eases are weighted on the share otal Toyota-Nissan-Honda- da sales held by each.

he notion that the Big 3 greed- raised prices along with the anese during the mid-1980s has widely repeated for years.

he allegations were leveled again last month by Richard Recchia, executive vice presi- of Mitsubishi Motor Sales of erica, in an address to the Au- otive News World Congress. y were repeated a week later by so Sugiura, retired chairman of da Motor Co., in a meeting *Automotive News* editors and rters.

nd Walter Huizenga, president he American International Au- obile Dealers Association, deli- d a similar message in a Jan- news release.

he Big 3 critics declared that U.S. makers opted for record its through higher prices in the -1980s and used those profits ay big bonuses to executives to diversify their operations ead of using the money to ad- e their automotive business.

ome of those statements are on mark: Big 3 profits did set a record in 1984; executive bonuses were more than generous; and higher prices made a substantial contribution. The Big 3 did diversify, but they also poured many more billions into research and development, tooling, new facilities and product.

In his speech defending the Japanese and criticizing Detroit, Recchia stressed the price angle: "From 1981 to 1986, as import prices soared due to controlled supply and changes in the exchange rate, the domestics did not restrain their prices; rather, they followed suit."

Another import leader emphasized investments. At last month's North American International Auto Show in Detroit, Robert McCurry said, "In a protected market, Detroit did begin to make good profits — and to invest them in aerospace companies, computer companies and S&Ls." McCurry is executive vice president of Toyota Motor Sales U.S.A..

Informed of the *Automotive News* study last week, Recchia called it a comparison of apples and oranges and said it did not give proper consideration to the many new models introduced by the four Japanese companies. The Big 3, he said, did not bring out as many new products.

For instance, the Camry was redesigned during the 1982-1987 time period; the Tempo was not.

"Any hike by the Big 3 beyond normal economic forces lessened the impact the Big 3 could have had on the market," Recchia said. "It makes no difference whether the Big 3 raised prices dollar for dollar. They had the chance to hold increases to a minimum, get a strong advantage over the Japanese and take market share. They did not take advantage of that."

The Voluntary Restraint Agreement limited exports of Japanese cars to the United States and presumably permitted the Japanese to charge more because demand exceeded supply. It went into effect April 1, 1981, when the 1981 model year was half over. The *Automotive News* price analysis covers the 1982-87 model years.

The study compared the announced Big 3 price hikes with those of the four Japanese sales leaders in this country. (See table.)

In four of those six model years, the four Japanese makes raised prices more than the Big 3, both in dollars and in percent of increase. In 1982, before the change in the yen/dollar relationship, the Big 3 had a higher dollar increase, but a slightly lower percentage boost. Only in 1984 did the Big 3 top the Japanese in both dollar increase and percentage increase.

In the 1986 model year, when the currency exchange rate showed its greatest change — about 54 percent — the four Japanese leaders announced car price increases averaging $1,308 or 14 percent, according to the *Automotive News* analysis. The Big 3 prices rose $804 or 6.1 percent.

The following year, the currency gyrations settled down, and the Japanese played catch-up. Their 1986 increase, though sizable, was less than the yen-dollar change. In the 1987 model year, car prices of the four Japanese leaders went up an average of $809, or 7.2 percent. The Big 3 settled for $320, or 2.4 percent.

The yen rose from 156 to the dollar to 143 during the 1987 model year, a gain of 9 percent.

Looking at individual models, from April 1981 to April 1987, a Nissan 210/Sentra Deluxe (or E) two-door went up 35 percent; a Honda Accord four-door, 41 percent; a Toyota Corolla Deluxe four-door, 44 percent; and a Honda Civic DX three-door, 46 percent. A Ford Escort two-door rose 25 percent; a Mustang rose 33 percent.

The bigger domestic cars had bigger price hikes. A Chevrolet Caprice four-door rose 50 percent in the 1982-87 model years, and a Buick LeSabre jumped 69 percent. All percentage figures reflect increases in base sticker prices without adjusting for equipment changes.

Each of the Japanese models mentioned was redesigned during the 1982-87 period. Of the Big 3 models, only the LeSabre had a complete change.

The strengthening of the yen was a big factor in the Japanese price spiral. In September 1985, the exchange rate was 240 yen to the dollar. By mid-June 1986, it was 166 yen to the dollar. AN

AUTO PRICE INCREASES — 1982-1987

Annual price, increases announced by the companies for their comparably equipped cars. Calculated by Automotive News.

Big 3 spent profits on execs, acquisitions

OHN K. TEAHEN JR.
nior Editor

The Big 3 made a pile of money in the mid-1980s. heir net profits totaled $6.3 billion in 1983, limbed to a record $9.8 billion in 1984, fell back nd then improved to $9.5 billion in 1987.

What did they do with it? Executives and share- olders did well, and some was used for extracur- icular acquisitions — non-automotive stuff.

In 1985, Chrysler Corp. paid $637 million for ulfstream Aerospace Corp. and $552 million for inancial properties. Ford Motor Co. shelled out 493 million for First Nationwide Financial Corp. nd $330 million for New Holland farm equipment.

Chrysler found the aircraft business wasn't its ag and sold Gulfstream for $825 million in 1990. ord sold 80 percent of New Holland last April.

Meanwhile, Chrysler Financial Corp. and Ford's Financial Services Group are the only parts of those companies that are showing a profit.

General Motors was the king of the extracurriculars. In 1985, it coughed up $5.2 billion for Hughes Aircraft, but only $2.7 billion was cash. The rest was in new Class H stock. GM has since purchased some $300 million of those shares, bringing its cash outlay for Hughes to a bit more than $3 billion.

The Hughes deal followed GM's 1984 purchase of Electronic Data Systems Corp. for $2.5 billion. To that, add the $700 million it cost to buy EDS founder Ross Perot off the GM board in 1986.

But the Big 3's capital expenditures on the automotive side were several times the amounts that went into diversification. For example, GM spent nearly $27 billion for plant facilities and special tools in 1985-86-87, including a single-year high of $11.7 billion in 1987. AN

Chrysler executive blames margins for high Japan stickers

MARY CONNELLY
Staff Reporter

If a Jeep Cherokee costs too much in Japan, blame excessive Japanese distribution and dealer margins that add 26 percent to the sticker, Chrysler Corp. says.

Honda Motor Co. and its dealers require a much higher margin for selling the Cherokee in Japan than they do for U.S.-assembled Honda Accords sold there, says Thomas Denomme, Chrysler executive vice president for the corporate staff group.

Chrysler's Japanese distributors, including Honda, require a distribution margin of $11,500, which adds to the cost of a Jeep Cherokee Limited in Japan, Denomme says. Homologation costs, sales tax, freight and customs fees total an additional $5,500, bringing the vehicle's list price to about $44,000 in Japan, he said. The same vehicle sells for about $27,000 in the United States.

Denomme: cites dealer margins

Chrysler's latest blast against Japanese trade practices is aimed at Honda, which began distributing Jeeps in Japan in early 1991. Less than a month ago, Chrysler Chairman Lee Iacocca publicly ridiculed Honda's pledge to triple Jeep sales to 1,210 by 1994.

Denomme wrote a response to an article in last week's *Automotive News* examining Jeep pricing in Japan. The article analyzed the pricing of a Cherokee Limited with a list price of $25,484 in the U.S. market and 5.2 million yen, about $40,000, in the Japanese market. The markup is higher than for most other imported vehicles in that country.

Jeeps are sold in Japan through Chrysler Japan Sales Ltd. and through Honda's Primo channel.

In the Feb. 3 article, a Honda spokesman said Honda "has no control on the import prices," adding that pricing is done through Chrysler. Honda said its dealers complain that the Jeep Cherokee price is "at least 1 million yen ($7,800) too high" to compete with Japanese products.

Denomme said Honda's suggestion that Chrysler sets the pricing is "at best disingenuous and at worst a deliberate mischaracterization of how prices are actually set in Japan."

The high Cherokee price "is a result of needless homologation standards, complex customs clearance procedures and, most importantly, excessively high margins required by the Japanese distributors and by Honda's dealers," Denomme wrote.

Denomme attributed a $17,000 difference between U.S. and Japanese Cherokees to four costs: homologation, about $3,000 per unit; overseas freight and customs clearance, $1,000; sales tax,$1,500; and distribution margins, $11,500.

The margins are "required by Honda and others acting as our distributors and by Honda's dealers, most of which are owned by Honda," Denomme said.

In contrast to the Cherokee's added cost of $17,000, which is 38.6 percent of the purchase price, he said, a Honda Accord exported from Marysville, Ohio, to Japan carries a total added price of only 26 percent, including distribution margins for the Japanese distributor owned by Honda and for Honda dealers.

"If that same margin were offered to Chrysler, we could reduce our Japanese price on the Cherokee by more than $4,000," Denomme said.

Chrysler said its own U.S. distribution margin on the Raider sport-utility, a Dodge-badged version of the Japanese-built Mitsubishi Montero retailed by Chrysler in the late 1980s, was almost $7,000 less than the margin for the Cherokee in Japan.

Wrote Denomme: "Honda's comments can only be interpreted as yet another attempt by the Japanese to obfuscate the overriding reality, which is that the Japanese auto market has been for 40 years, and continues to be, closed to foreign competitors." AN

IMPORTERS

Publicity counters 'Buy American' rally

continued from PAGE 4

"American" cars on the road. More than 60,000 of the brochures were sent to politicians, journalists and association members in January.

Last week, the American International Automobile Dealers Association completed a four-page booklet to be distributed at the NADA convention and to its members and the media.

The booklet stresses the global nature of the auto industry and the positive effects of foreign investment.

The Japanese, who have spent billions in U.S. plants and research and development facilities, now seem ready to trumpet those investments. For example:

■ Jan Thompson, vice president of Mazda Motor of America, says she's considering a campaign fo

Rock, Mich.

■ Chris Wackman, vice president for marketing at Subaru of America, says his company now is considering putting stickers on Legacys built in Lafayette, Ind., to proclaim their origin.

The stickers have been printed for a while.

"Maybe it's time we do that," Wackman said.

He also said the company would consider putting a tag at the end of some ads to point out that Subaru is building cars in the United States.

■ And maybe it wa [illegible] dence that Toyota [illegible] American event [illegible] Bowl to reverse i [illegible] tive

"From the [illegible] sion was m [illegible] to Castabuilt mes [illegible] ting to Jeep/ story," [illegible] and to Chrysler who a [illegible] bert Lutz on Jeep/ "The [illegible] orm operations matters.

Makers revise incentives

ARLENA SAWYERS
taff Reporter

Revised incentive programs were nnounced last week by Ford lotor Co., General Motors, Toyota lotor Sales U.S.A. Inc. and merican Suzuki Motor Corp.

INCENTIVE WATCH— DEALER INCENTIVES

NEW PROGRAMS

PONTIAC (expires June 4 for 1992 models, May 4 for 1991 models)	
LeMans	$1,000
SUZUKI (expires April 2)	
Swift (1992)	$400-700
Sidekick (1992)	$300-700
Swift (1991)	$700-1,000
Sidekick (1991)	$1,000-1,500
TOYOTA (expires April 2; 1991-92 models unless otherwise noted)	
Corolla (1992)	$600-1,000, quota
Celica	$400-800, quota
Tercel	$200-600, quota
Pickups (base 4x2)	$900-1,500, quota
Other pickups	$400-1,000, quota

CONTINUING PROGRAMS

ACURA (1991 models, expires May 1)	
Legend sedan	$2,500
Legend coupe	$3,000
Integra (expires Feb. 3)	$500
AUDI (1991 models, no expiration date)	
Audi 100 and 200	$1,500
Audi 90	$1,000
Rebates apply to models purchased by dealer from Audi of America port stocks.	
BMW (no expiration date)	
750iL (1991)	$10,000
SUZU (No expiration date; 1990-92 models unless otherwise noted. Rebates vary by regions.)	
Impulse	$1,300-2,500
Stylus S	$600-800
Stylus S (Calif. only)*	$1,250
Stylus RS	$600-800
Stylus XS (1991, except Calif.)	$1,100
Stylus XS (Calif. only)*	$2,500
Rodeo	0-$850
Trooper (except Calif.)	$750-850
Pickup	$500-1,500
Pickup (1991 4x4, bonus in some regions)	$400
Dealer has option of sharing rebate with buyer.	
LOTUS (1991, no expiration date)	
Elan	$5,000
Esprit Turbo	$11,000-15,000
MITSUBISHI (1990-92 models, expires Feb. 10. This is the range of regional programs. Some rebates are based on number sold.)	
Precis	0-$1,000
Mirage	0-$750
Galant	0-$2,000
Eclipse	0-$2,000
Montero	0-$1,250
Pickup	0-$2,000
PEUGEOT (no expiration date)	
405	$5,000
505	$6,000
PORSCHE (1991 models, no expiration date. To qualify for the following rebates, dealers had to buy two cars from port stock by Jan. 17.)	
911 Carrera 2, 928	$9,500
911 Carrera 4	$13,500
911 Turbo	$14,000
SUBARU (1991, expires March 3)	
Legacy	$1,200-1,700
VOLKSWAGEN (no expiration date)	
Passat (1991)	$1,500
Jetta, Fox, Golf (1991)	$500
All 1990 cars	$500-1,500
VOLVO (expires March 31)	
1992 models	
240 series	$500-1,000
740 series	$1,000-1,500
940 series	$1,500
1991 models	
240 series	$1,500
740 series	$1,750-2,500
940 series	$1,500-2,500
780 coupe	$2,500

incentive WATCH

Ford's new program includes regional customer rebates on some vehicles.

Incentives on 1991 and 1992 Ford cars and trucks range from $400 to $1,500; spiffs on 1991 and 1992 Mercury models range from $400 to $2,000.

Alternative financing of 2.9 to 7.9 percent is available, depending on contract length, on all vehicles except Lincolns.

The expiration date on Lincolns was extended from March 3 to March 31, the date the rest of Ford's program expires.

Until Sept. 24, active military personnel who buy any Escort, Festiva, Mustang, Tempo, Probe, Ranger, Tracer, Topaz or Cougar are eligible for an additional $400 rebate.

New customer rebates announced by GM divisions have two expiration dates: May 4 for 1991 models and June 4 for 1992 models.

Buick customer rebates range from $250 to $1,000 on 1991 and 1992 cars. The programs exclude Park Avenue, Park Avenue Ultra and Roadmaster.

In lieu of rebates, consumers can choose cut-rate financing of 2.9 to 6.9 percent depending on contract length.

Chevrolet's customer rebates range from $300 to $750 on 1991 and 1992 Chevrolet and Geo cars and from $500 to $1,000 on 1991 and 1992 Chevrolet trucks.

GMC is offering customer rebates ranging from $400 to $1,000 on 1991 and 1992 trucks.

Oldsmobile is continuing its regional customer rebate program. The rebates range from $500 to $2,000 on 1991 and 1992 vehicles and exclude the new 1992 Achieva. In lieu of rebates, consumers may choose cut-rate financing of 2.9 to 6.9 percent depending on contract length.

Dealers report that **Pontiac** is paying $1,000 in factory-to-dealer cash on 1991 and 1992 LeMans models. Pontiac announced its new customer rebate program a week earlier than the other GM divisions.

A new factory-to-dealer incentive offered by **Toyota** pays $200 to $1,000 on 1992 cars, $200 to $800 on 1991 cars and $400 to $1,500 on 1991 and 1992 trucks. The program ends April 2.

Also until April 2, **Suzuki** is paying its dealers incentives on Sidekick and Swift.

The payments are: 1991 Swift, $700 to $1,000; 1992 Swift, $400 to $700; 1991 Sidekick, $1,000 to $1,500; and 1992 Sidekick, $300 to $700. ▪

GM

Carmaking groups undergoing changes

continued from PAGE 4

our employees," the GM statement said.

The turmoil that resulted from the 1984 upheaval caused GM Chairman Robert Stempel and other top executives to vow never to repeat the error of announcing a reorganization before preparing employees first.

Sensitivity to those concerns was evident as GM created the Powertrain Division in three stages: First by combining the engine operations of B-O-C and C-P-C, then by bringing in the transmission operations of Hydra-matic Division, and finally by adding Central Foundry Division last year.

When each move occurred, employees saw it as a natural consequence and were aware of how they fitted into the new organization.

Stempel is viewed throughout GM as an executive deeply concerned about his employees. Before moves are made, Stempel likes to make sure employees get the information first and understand why they must be made. Before his Dec. 18 cutback announcement, Stempel talked via satellite with all employees so they knew what to expect.

Reorganizing B-O-C and C-P-C so they work more like a unit devoted to North American vehicle operations instead of separate entities may seem like a natural move by the time it actually occurs.

In fact, since the 1984 reorganization, the roles of both central organizations have been reduced.

Employment at the two massive car groups has been reduced greatly by plant closings and attrition and because the company saw a need to move certain disciplines from a central organization out to where cars are actually designed and built.

There are fewer planners, engineers, buyers, finance people, marketers and labor relations specialists on the central staffs of the groups. They have been moved to platform teams with direct responsibility over a particular line of cars.

At B-O-C, that translates into fewer people at its headquarters in Warren, Mich., and more at its engineering centers at Cadillac in Detroit and at the Lansing, Mich., and Flint, Mich., automotive divisions.

One top GM executive, who spoke on the condition of anonymity, said the groups have been melting away as GM took a hard look at the functional and employment needs of building cars, and where the employees should be deployed.

B-O-C's central office staff has shrunk so much that it has leased space in its headquarters building to other GM organizations and is making a profit in rent. B-O-C had 110,000 employees when it was formed and now has 71,000.

C-P-C had 150,000 employees when it was formed in 1984 and has about 101,000 employees now. That figure includes 13,400 GM de Mexico SA employees who were not part of C-P-C eight years ago.

The responsibilities of the two car groups also have evolved over the years, making a more unified organization logical.

B-O-C once was charged with engineering and assembly of large cars, but has been given responsibility for most of GM's small cars such as the Chevrolet Corsica and Beretta, Buick Skylark, Olds Achieva and Pontiac Grand Am.

C-P-C was responsible for small cars, but in 1989 was given jurisdiction over large rear-wheel-drive cars such as the Chevrolet Caprice and Buick Roadmaster. ▪

Robertson leads Jeep operations

Chrysler Corp. has named Bernard Robertson vice president of Jeep/truck engineering and general manager of Jeep/truck operations.

Robertson had been general manager of Jeep and truck platform engineering.

Robertson: Jeep general manager

Robertson assumes the title of general manager of Jeep/truck operations from Francois Castaing. The change means that Robertson now heads one of Chrysler's four platform groups which develop the company's vehicles.

Castaing continues as vice president of vehicle engineering, responsible for the design, development and implementation of all vehicle engineering programs. With Robertson heading Jeep/truck operations, Castaing now "will focus even greater attention to the development of vehicle tech[illegible] including electric and [illegible] fuel vehicles," Chrys[illegible]

Robertson will r[illegible] ing on matters r[illegible] truck engineerin[illegible] President Robe[illegible] truck platform[illegible]

GM unions reject taking shutdown as vacation time

LIZ PINTO and PHIL FRAME
Staff Reporters

UAW locals at General Motors plants nationwide are refusing to take a mandatory two-week vacation this summer during a companywide shutdown.

GM would have to pay an estimated $260 million more in unemployment benefits and Supplemental Unemployment Benefits if the workers won't take the shutdown as vacation.

Many locals are rejecting GM's request without a rank-and-file vote. The two-week shutdown was part of the plan proposed by Chairman Robert Stempel in December to cut costs.

"The union position is that those two weeks of shutdown are for a model change and we have the right to draw unemployment and SUB when that happens," said Steve Featherston, president of UAW Local 1999 in Oklahoma City. "The GM-UAW contract is clear on how members will take their vacation, which is when they want to. So we do not intend to vote on the GM request."

Similar attitudes reigned at all the plant locals contacted by *Automotive News*. Local presidents said they did not intend to bring GM's request to a vote.

Says GM spokesman John Maciarz: "If they say no, I guess it's no. We can't force people to take vacation." AN

Output climbs in January

ANNE E. WRIGHT
Chief Statistician

U.S. and Canadian car and truck production was 842,541 in January, 2.0 percent more than in January 1991 and 15.0 percent above December.

Increased truck production was the reason for the overall gain.

U.S. truckmakers' January build was 266,733, up 13.8 percent over last year. It was the highest January total since 1989 when 395,841 trucks were assembled.

Truck production in Canada topped the year-ago month by 48.5 percent and was the highest for January since 1962.

On a dimmer note, car production in the United States and Canada was down 8.5 percent from the year-ago month.

U.S. carmakers assembled 6.9 percent fewer cars in January than last year but topped their December build by 14.3 percent.

In Canada, car assembly was off 17.6 percent from the year-ago month and was 1.0 percent below the December total.

Last week, car and truck production in the United States and Canada slowed for the first time in 1992. The daily build was 42,706, down 7.0 percent from the prior week's 45,900.

Last week's estimated U.S. car production was off 0.6 percent from the prior week and was 1.7 percent below last year.

Canada's estimated car production last week fell 30.7 percent from the prior week and 17.4 percent from the year-ago week.

Year-to-date, car production is off 10.8 from 1991's build. U.S. carmakers are off 9.4 percent, and Canadian producers are down 19.2 percent.

In the United States, estimated truck production last week slipped 12.1 percent from the prior week but soared 92.4 percent over the 1991 week. Last year, eight truck plants were idle because of slow sales.

Truck output in Canada last week was 1.7 percent below the prior week and 48.6 percent above the year-ago week.

Year-to-date, truck producers in the United States and Canada continue to top 1991 totals. U.S. truck production is up 19.9 percent, and Canada truck production is up 54.1 percent.

General Motors announced that production of the 1993 Cadillac Allante begins today at the Detroit-Hamtramck, Mich., facility. The plant has been down since Dec. 14 for model changeover.

GM scheduled overtime for the third week in a row at the Janesville, Wis., truck facility. Last week's overtime was on the crew-cab line only. The company also scheduled Saturday overtime last week at the Scarborough, Ontario, and Oshawa, Ontario, truck plants.

Ford Motor Co. idled one shift at the Lorain, Ohio, truck facility this week in response to slow sales and high inventories.

Chrysler Corp.'s St. Louis No. 2 plant (minivans) worked three seven-hour shifts last Saturday. AN

Saturn prices up $100-$200

DETROIT — Saturn sedan prices will rise $200 March 1, and the sport coupe will go up $100. The increase follows January sales of 10,204 cars, the best month in Saturn's history.

Prices of optional equipment also will climb. The hike will be $30 on automatic transmission and air conditioning, $50 on styled teardrop wheels, $55 on power sunroof and $25 to $55 on option packages for various models.

As of March 1, Saturn prices will be: SL four-door sedan, $8,395; SL1 sedan, $9,195; SL2 sedan, $10,595; sport coupe, $11,975.

This is Saturn's second increase on 1992 models. At introduction time last fall, prices rose $100 to $400 per car.

Toyota profits fall 62 percent

TOKYO — Toyota Motor Corp. said Friday that its unconsolidated operating profit slid 61.6 percent in the first half of its fiscal year ended Dec. 31, to to 77 billion yen (about $606 million at current rates). Toyota attributed most of the decline to foreign-exchange fluctuations and higher depreciation costs.

The company said pretax income fell 25.7 percent, to the equivalent of $1.6 billion. Net income fell 33.7 percent, to $815 million.

Net sales increased 1.6 percent for the period, to $34.6 billion.

The company said vehicle sales worldwide were down 1.2 percent, to 2.05 million units, while overseas production fell 8.7 percent, to

MITI may cut export ceiling

Voluntary limit lowering may follow primary vote

RICHARD JOHNSON
Staff Reporter

TOKYO — The Japanese government will announce as much as a 30 percent reduction in the country's voluntary car-export ceiling to the United States after this week's primary elections in New Hampshire, industry officials said here last week.

According to an industry insider who is close to negotiations between the government and the Japan Automobile Manufacturers Association, the voluntary export ceiling will be slashed to 1.6 million or 1.7 million cars a year from 2.3 million, the ceiling since 1985.

The lower number would be about as many cars as Japanese companies already plan to export to the United States this year.

"It's what MITI wants, and it can't be avoided," said the executive, who insisted on anonymity.

This official and others said the Ministry of International Trade and Industry normally would already have announced export levels for the fiscal year beginning April 1. But, they said, it has held off because of the tense trade situation and because it did not want to be perceived as an attempt to influence the New Hampshire voting. According to this thinking, the political benefits of announcing a cut now would accrue to President Bush at the expense of Democratic presidential contenders.

Although Japan's carmakers want to retain the 2.3 million level — or do away with the

Saturn asks dealers to step up expansion

PHIL FRAME
Staff Reporter

DALLAS — Saturn Corp. is asking its dealers to speed up their plans to add second and third stores as the company dramatically increases production.

Otherwise, Saturn's 2,450-acre manufacturing complex is going to start looking like a parking lot.

That wouldn't sit well with Saturn's 5,000 UAW Local 1853 members, 89 percent of whom voted to work an extra 10-hour day of overtime each week so the plant can increase weekly production from 3,600 to 4,500 cars.

Saturn President Richard "Skip" LeFauve acknowledged that Saturn executives asked for more stores at an informal make meeting at the National Automobile Dealers Association convention in Dallas. He said Saturn made the same pitch in a nationwide closed-circuit satellite telecast to dealers in January.

Since the telecast, dealers representing 15 potential new points have either moved forward the opening dates or are thinking about opening earlier, said Donald Hudler, vice president for sales, service and marketing.

Hudler expects the 135-store dealer network to grow to about 260 by year's end.

The message for the need for more points was driven home to dealers at the make meeting by Local 1853 Financial Secretary John Michaud, according to a Saturn dealer who did not want to be quoted.

The worst thing that can happen, Michaud reportedly said, is to start stockpiling cars where workers will see them and start wondering why they committed to overtime.

Stockpiled Saturns also could give executives at General Motors reason to consider rebadging the vehicles for another make.

Daihatsu throws in the towel in U.S.

Maker cites economy, cost of regulations

KRISTINE STIVEN BREESE
Staff Reporter

LOS ANGELES — Daihatsu's four-year effort to crack the U.S. market ended last week with its decision to stop sales at the end of the model year.

Daihatsu America Inc. announced that U.S.-bound exports of the firm's two vehicles, the Rocky sport-utility (which starts at $11,697) and Charade subcompact ($6,797), will cease late this month.

With the move, Daihatsu becomes the third importer in six months to withdraw from the market. Like France's Peugeot and Britain's Sterling, Daihatsu has also seen sales drop below 10,000 a year.

The pullout was triggered by "a broad variety of adverse circumstancees," said Chief Executive Officer C.R. "Dick" Brown. In addition to plummeting sales, he cited stiffening competition and the cost of complying with government safety and environmental regulations.

Daihatsu, concentrated on the coasts, lost almost 10 percent of its dealers in the last half of 1991 and currently has 209.

Customs slaps Honda with bill for duty

LINDSAY CHAPPELL
Staff Reporter

The U.S. Customs Service stunned Honda last week with what amounts to a $16.5-million bill for import duties on the company's Canadian-made cars.

Customs essentially stripped away many of Honda's claims for using local content in its North American products. As a result, the United States says Honda's Canadian-built vehicles don't have the 50 percent North American (U.S. and Canada) content they need to

Virginia rejects Calif. standards

The Virginia Senate last week defeated a proposal to adopt California emission standards for cars sold in the state. The vote kills efforts by Gov. Douglas Wilder to join other Eastern states in a move to California rules.

Wilder's proposal was killed by the Senate Transportation Committee after intense lobbying by oil companies and car dealerships. Wilder was one of 11 governors who last fall committed to adopting California standards.

So far, only New York and Massachusetts have made progress toward adoption of the California rules. New York's regulations have been challenged in court by the Motor Vehicle Manufacturers Association.

Iveco, Tatra plan venture

FRANKFURT — Iveco, Fiat Auto S.p.A.'s commercial-vehicle subsidiary, and Tatra, Czechoslovakia's largest heavy truckmaker, said last week they will form a $36 million joint venture in Czechoslovakia.

In the first phase, the venture will build Iveco vehicles in Czechoslovakia to round out Tatra's product line. Fiat would provide Tatra with parts and components produced in Czechoslovakia for Tatra trucks. The Tatra plant has a capacity of 16,000 units and 24,000 employees. Production is expected to start in 1993. Each company will invest $18 million.

Nissan switches Japanese agency

TOKYO — In a surprising and unusual move, Nissan Motor Co. has sacked Dentsu, one of its main advertising agencies in Japan for more than 40 years.

The blow, moving about $76.5 million in billings out of the world's largest agency and into rival Hakuhodo, was delivered in a formal letter.

The letter reads: "The severe structural problems the automobile industry is now facing have affected our company more than was anticipated. In view of the critical situation we will have to continue to reduce our budget for advertising and make the most effective use possible of our advertising expenditures. Taking all things into consideration, we have decided to use the agency services of Hakuhodo."

— Crain News Service

Lawmaker calls for origin labels

WASHINGTON — American consumers are confused about where the cars they want to buy come from, says U.S. Sen. Barbara Mikulski, D-Md.

Mikulski says she will introduce a bill this week to require labels on all new cars that show what percentage of their parts and assembly are American. The label would have to identify any country where at least one-third of the vehicle's parts originate.

"American car buyers have a right to know when they buy their Toyota or their Chevy what portion of that car comes from the United States of America," the senator said.

VW China gets kits from Africa

HONG KONG — Even though China and South Africa have no diplomatic relations, Volkswagen AG's new Chinese joint venture company said last week it will import 4,000 Jetta 2 semi-knockdown kits from Volkswagen of South Africa as part of the plant's trial production startup.

A spokesman for the First Auto Works, the Chinese partner in the FAW-Volkswagen Automotive Co., said in a telephone interview the kits would supplement 6,000 complete knockdown kits imported from Germany.

The FAW spokesman said the semi-knockdown Jetta 2 kits had to be imported from either South Africa or Mexico, the only two countries where the Golf derivative is still in production. But the Mexico-built cars are unsuitable for China's road conditions, leaving only South Africa as a source, he said.

Volkswagen in Germany is now producing the all-new Golf/Jetta 3, and Mexico is scheduled to begin output of the new car in April.

— Stephen Vines

Ford builds CFC-free Taurus

DEARBORN, Mich. — Ford Motor Co. announced last week that it would begin building Taurus models for east Texas that use the ozone-friendly air conditioning refrigerant HFC-134a.

The 134a replaces chlorofluorocarbon-12, which is believed to damage the atmospheric ozone layer that protects the Earth from harmful ultraviolet radiation.

Starting March 5, cars with the revised air conditioning systems will be built in batches of 500 for the eastern Texas market.

Ford, Dodge score well

WASHINGTON — The Dodge Caravan minivan and the Ford F-150 pickup scored well in the government's latest new-car crashes, but scores for the Toyota Paseo indicated a potential for driver head injury.

The Caravan had a head-injury score of 407 for the driver and 427 for the front-seat passenger, while the Ford pickup scored 860 for the driver and 590 for the passenger.

A score below 1,000 in the 35-mph crashes indicates that head injury is unlikely, according to the National Highway Traffic Safety Administration.

The two-door Paseo subcompact had a score of 1,006 for the driver, indicating head injury is possible. The passenger score was 797, according to NHTSA's latest New Car Assessment Program results.

All three had scores below 60 for chest injury, indicating that injuries were unlikely for either driver or passenger.

— Max Gates

briefly

This Chrysler makes money

Last year was lousy for many automakers, but not for **Chrysler Canada.** The company said last week that 1990 profits more than doubled to $34.2 million ($28.9 million U.S.), and sales rose 4.5 percent. "We just *managed* our way through the worst market we've seen in a decade," said President G. Yves Landry. "If we can do this in a tough year with a lot of carry-over product, can you imagine what will happen now with the Viper, the new LH line and the new Grand Cherokee?"

BUY ONE, GET ONE FREE — In an attempt to sell some new homes, the Rivergate Ridge subdivision in Mount Clemens, Mich., is offering a 1992 **Dodge** Shadow with every purchase of a new custom-built home. The Shadows, from Sterling Heights Dodge in Sterling Heights, Mich., are assembled just a few miles from the subdivision. Prices of the homes start at $150,000. The Dodge? Prices start at around $7,700.

SHO OWNERS SPEAK — Owners of the sporty Taurus SHO have been asked by **Ford Motor Co.** what they would like to see in the next generation SHO model. Bill Staib, editor and founder of the *SHO Registry*, a quarterly publication for SHO owners, says the wish list from subscribers includes more horsepower, four-wheel drive, an upgraded interior and a memory seat. "If they want to listen, we'll definitely speak," Staib said. Staib says the publication has 2,600 subscribers, most of them from California.

ROAD SHOW — **Chrysler Corp.**'s new off-road vehicle is going on the road. On March 10, Chrysler will begin taking its 1993 Jeep Grand Cherokee on a two-month nationwide tour to the plants of 13 major suppliers. Under the banner of "Teaming Up for Quality," Chrysler said it will provide supplier employees with an early look at the vehicle they help make. The tour begins in Irwindale, Calif., at TRW Technar, which supplies airbag sensors. It concludes May 5 in Holland, Mich., at Donnelly Corp., which supplies mirrors.

HOME MOVIES — **General Motors** is teaming up with the White House Historical Association and WQED-TV in Pittsburgh to provide a video tour of the White House, honoring the bicentennial of the presidential residence. GM is footing the bill for the cost of 30,000 video cassettes of the tour and companion teachers' guide to be made available to schools participating the White House 200th anniversary art exhibit and educational program.

GET CRACKING — On his way into the **Subaru of America** make meeting at the National Automobile Dealers Association convention in Dallas, Thomas Gibson, president and chief operating officer, was informed that a newspaper had told its readers to "expect a $15,000 minivan" from Subaru next year. He said Subaru has no such plans, at least not in the short run, and certainly not next year. "If that's true," said Gibson, "I don't have time to go to this meeting. I've got a lot to do between now and next year."

Gibson: short notice

Hey, Aunt Millie: Did Honda make your U.S. car?

Eye of beholder may be best norm

DAVID VERSICAL
National Editor

So the Trade War of 1992 has inspired Aunt Millie to buy an American car. And Uncle Ned is more intent than ever on buying an import.

Well, as industry followers know, that's easier said than done. When the relatives find out the Dodge Stealth is made in Japan and Honda Accords are built in Ohio, they'll begin to realize things aren't what they seem. The more they research, the more complicated it will get.

U.S. workers are no doubt discovering the same thing as they try to take advantage of their firms' contributions toward the purchase of an "American" car. It all depends on what standard they use. And in an age of global partnerships and complex government regulations, whether a car is "domestic" or not often lies in the eyes of the beholder.

Still, some lines can be drawn. And *Automotive News* lists them in a table on Page 66.

First, the country of assembly. If Aunt Millie uses that standard, she'll have to decide for herself whether a Tennessee-made Nissan Sentra is just as American as a Michigan-made Chevrolet Caprice.

Second, we note Canadian-built cars. The United States and Canada have had a free-trade pact governing autos for more than 25 years, so in many eyes a U.S.-built Chrysler minivan is no different than one built in Ontario. When the U.S. Commerce Department tallies the nation's trade balance, though, the Canadian minivan is counted as an import.

Canadian-built cars need 50 percent "value-added" North American (Canadian and U.S.) content to qualify under the trade pact for duty-free shipment to the United States. But the United States and Canada don't always agree on the figures, and a U.S. Customs Service ruling last week that could subject Honda's Canadian plant to tariffs drew a sharp protest from the automaker. (See story on this page.)

A third possible standard is North American content as figured by the EPA. (Again, for the auto industry, North American is defined as Canada and the United States, excluding Mexico.)

That is how the U.S. government determines whether a car falls into a "domestic" or "import" fleet under federal fuel economy rules. And it holds some surprises: Mexican-assembled Mercury Tracers qualify as domestic; the assembled-in-Detroit Cadillac Allante, with an Italian-made body, is an import.

The EPA and the U.S. Treasury, through its U.S. Customs Service, have different thresholds for domestic content, and they count different things as content.

For import duty purposes, Ford's Canadian-built Crown Victoria and Grand Marquis have 68 percent North American content. It satisfies the U.S.-Canadian trade rules to be imported into the United States duty-free. But for EPA fuel-economy rules, which take into account such things as wages and advertising costs, the level is 73 percent. That makes it an import, not counted in Ford's domestic corporate average fuel economy numbers.

The EPA also groups by car line, not body style. If Aunt Millie likes the fact that Ohio-built Accord sedans, wagons and coupes have more than 75 percent domestic content, she might also want to know that the EPA counts the Ac-

Certification registration begins

Ray Green, left, NADA past president, signs up the 40 salespersons and seven managers who work at his dealerships for the NADA Sales Certification program at the NADA convention last week. Rolf Ruehring, executive director of NADA Dealership Operations, helped Green and other dealers enroll more than 500 salespersons. Green was instrumental in the development of the training program.

Ford loses a record $2.3 billion

CHARLES M. THOMAS
Staff Reporter

Ford Motor Co. expects the cost of incentives to fall this year as auto sales gather steam. More sales and lower incentive costs will go a long way to shore up the company's earnings performance.

In last year's double-dip recession, Ford posted record losses of $2.3 billion compared with earnings of $860 million in 1990. Sales and revenues were $88.3 billion, down 9.6 percent. The automaker's previous record annual loss was $1.5 billion in 1980.

Ford's worldwide automotive operations lost $3.2 billion in 1991, compared with a profit of $99 million in 1990. Automotive losses in the United States in 1991 amounted to $2.2 billion compared with a loss of $17 million in 1990.

David McCammon, Ford's vice president for finance and treasurer, blamed severe recessions in the United States, Australia and Great Britain for the losses.

But Ford's financial subsidiaries had record profits, and Autolatina, the company's Brazilian joint venture with Volkswagen, finally broke even in 1991.

Ford's average cost of incentives was $1,000 per vehicle last year. Incentives recently announced for this year work out to about $850 per unit, McCammon said.

Fourth quarter losses were $476 million, better than a $519 million loss in 1990. Domestic automotive operations lost $506 million in fourth quarter 1991 compared to a loss of $583 million for the period in 1990. Outside the United States, automotive operations lost $206 million in the fourth quarter compared to $123 million in losses a year ago.

Ford sold 1,296,000 units worldwide in fourth quarter 1991, down 140,000 units from a year earlier. For the year, Ford said it sold 5,359,000 units, down 513,000.

The company's financial services group reported record earnings of $927 million in 1991, up 22 percent from $761 million in 1990. Ford

Tariff hike sought for imported minivans, four-door sport-utilities

MAX GATES
Staff Reporter

WASHINGTON — Proposals to raise the tariff on imported minivans and four-door sport-utilities are being considered by U.S. Treasury officials and by Democrats in Congress.

Importers and their dealers are actively opposing the efforts to reclassify minivans and sport-utilities as trucks, rather than passenger cars. As trucks, they would be subject them to a 25 percent tariff instead of the current 2.5 percent tariff charged on cars.

Department of the Treasury officials last week were reviewing their own 1989 decision that classified minivans and four-door sport-utilities as cars, subject only to a 2.5 percent tariff. Imported pickups and two-door sport-utilities pay the 25 percent duty.

A Treasury spokesman said the review is a routine response to the proposal in Congress.

The moves come in the midst of "Buy America" campaigns in the auto industry and as Democrats in Congress continue to pressure the Bush administration to reduce the $41 billion annual trade deficit with Japan. Three-quarters of that deficit comes from auto-related trade.

A tariff increase would cost the government money, argued George Nield, head of the Association of International Automobile Manufacturers in Arlington, Va. The 25 percent tariff "will very likely reduce the tariff earnings to zero, because the imports will very likely be non-competitive," he said.

In 1991, imports took 17.1 percent of the combined U.S. sales of minivans and compact sport-utilities, according to the *Automotive News* Data Center.

The 1989 Treasury ruling prompted Japanese makers to shift from two-door to four-door versions of their sport-utilities. Mazda buys its domestically produced two-door sport-utility, the Navajo, from Ford Motor Co. Suzuki builds two-door Sidekicks in Canada and imports four-door versions from

Ford Europe losses prompt restructuring

DIANA T. KURYLKO
Staff Reporter

FRANKFURT — Shaken by a staggering loss in the United Kingdom, its home market, Ford of Europe confirmed last week that it is studying the possibility of moving its headquarters to the Continent as part of a sweeping program to streamline operations.

"As part of our overall restructuring program, Ford is leaving no stone unturned to find ways of improving the international competitiveness of our European operations," the company said in a statement.

The company denied that it is considering moving its research and engineering operations from Britain to Germany, however.

Ford Motor Co. late last week reported a loss of more than $1.1 billion in 1991 on its European operations, once the crown jewel of its domain. The company said that a $761 million loss by Ford of Britain and a $354 million loss at Jaguar wiped out profits on the European continent and other overseas markets.

Had Jaguar ownership not been transferred directly to world headquarters in Dearborn in November, said Ford of Europe, its loss would have been $1.7 billion.

Ford of Europe earned $145 million in 1990 and a record $1.19 billion in 1989.

Against that backdrop, Ford confirmed that it is considering the relocation of its headquarters from Britain as part of a restructuring that will eliminate thousands of jobs and slash development spending by 25 percent in coming years.

Company insiders — notably Ford of Germany executives — have recommended such a move for years, grousing that corporate staff in Britain are too isolated and out of touch with what one called the "real" world.

Like other carmakers in Europe, Ford, the No. 4 producer, is bracing for an onslaught of more products from Japanese transplants building cars in England, the heart of its market.

William E. Fike, president of Ford of Europe, said last week that the company's restructuring would include:

- A 30 percent cut in the ranks of management, indirect salaried workers and foreign service employees by the end of next year. The program, instituted last year, has already trimmed 6 percent of the salaried staff and is ahead of schedule, Fike said.

digest

SOUTHEAST TOYOTA LOSES SUIT

DARLINGTON, S.C. — A South Carolina jury ruled last week that Southeast Toyota Distributors Inc. defrauded a local businessman when he bought a Toyota dealership in 1986.

Richard Beasley, a Florence, S.C., banker, claimed that Southeast Toyota provided falsified financial data on Toyota of Florence Inc. Beasley also claimed the company forged his name to financial documents relating to the purchase and coerced store managers into accepting unwanted inventory.

Southeast Toyota plans to appeal. The company said the Beasley verdict would not affect the outcome of more than a dozen other dealer suits against the independent distributor.

FORD RECALLS TRUCKS

DETROIT — Ford Motor Co. is recalling about 350,000 1992 light- and medium-duty F-Series trucks, Broncos and Rangers because of a potential problem in the door latches.

The company said if water leaked into the door-latch release mechanism and froze, the door could appear to be latched when it wasn't.

INVESTORS LIKE CHRYSLER

HIGHLAND PARK, Mich. — Chrysler Corp. could get $800 million to $1 billion in cash with an offering of new, convertible preferred shares to institutional investors. The company declined comment on the offering.

Chrysler had intended to sell 8 million high-yield, preferred shares at $50 each, for $400 million. But there was strong demand last week for the stock, which offers a dividend of 9.25 percent to 9.75 percent and converts to common stock in 1995.

Investors appear to be betting that Chrysler's cost-cutting and its upcoming new products will boost the company's fortunes. Chrysler lost $795 million last year.

CARRYOVER CASH STAYS

DALLAS — General Motors will pay a 5 percent carryover allowance on all 1992 models in a dealer's inventory when the 1993s are introduced, and Ford Motor Co. has announced a 5 percent carryover rebate on Escort and Probe.

Ray Rota, GMC Truck general sales manager, said GM dealers will receive the same allowance as last year. GM will pay 5 percent of sticker price upon delivery to customers for every 1992 vehicle sold between the 1993 introduction and March 31, 1993. Dealers will get a lump-sum payment of 5 percent for each 1992 vehicle in stock after March 31, 1993.

Ross Roberts, general manager of Ford Division, said dealers will get the 5 percent allowance on 1992 Probes and Escorts when the 1993 models are introduced. The new Escort will debut in the spring and the Probe in June.

The company has not announced carryover payments on other 1992 models, but Roberts said "it's important that we have a good price spread" between the older and newer models.

ACHIEVA SCX IS $15,190

The highest-performing version of the new Oldsmobile Achieva has a manufacturer's suggested retail price of $15,190. The SCX is $2,475 more than the base Achieva S coupe.

J. Michael Losh, Oldsmobile general manager, announced the price of the sports model at the Chicago auto show.

The heart of the SCX package is a 190-horsepower version of the 2.3-liter Quad 4 engine. The SCX also features a five-speed manual transaxle, low-back-pressure exhaust, 14-inch aluminum alloy wheels, a wider-track rear axle than regular Achieva models and an electronically adjustable shock-damping system. As on other Achievas, anti-lock brakes are standard equipment.

WHITE CALLS FOR QUOTA

TORONTO — Canadian Auto Workers President Bob White wants the Canadian government to limit Japanese vehicle imports to 16 percent of the Canadian market. He said the quota should be phased in over two years. It would not affect vehicles built in North American transplants. In a speech at a *Financial Post* conference on the auto industry, White also called on the government to withdraw from the U.S.-Canada-Mexico free-trade talks and peg the Canadian dollar at 80 cents U.S.

Retail upturn builds hopes

JIM HENRY
Staff Reporter

A substantial jump in early-February sales, coming on the heels of a late-January gain, carry an early whiff of a sales recovery.

The industry sold 281,082 cars and light trucks in the first 10 days of February, 13.8 percent more than last year when the Persian Gulf ground war was underway. Truck sales shot up 24.6 percent, and car sales rose 8.9 percent.

Sales were awful in the year-ago period, but analysts said this year's figures contain a much smaller percentage of fleet business, and the increase in retail sales is cause for optimism.

"The retail customer is starting to come back, and that's the guy who's been so elusive for the last couple of years," said Jack Kirnan, auto industry analyst for Kidder, Peabody & Co. in New York. "There's no question that there's very powerful evidence a recovery is taking hold in the industry."

General Motors sales jumped 23.8 percent, and Ford Motor Co. was up 21.8 percent in early February. American Honda Motor Co. Inc. rose 15.8 percent; Nissan Motor Corp. in U.S.A. edged up 4.7 percent; and Toyota Motor Sales U.S.A. Inc. surged 24.2 percent. Each of those companies reports 10-day sales totals. *Automotive News* estimates the figures for others.

Kirnan said Big 3 products have made it onto more buyers' shopping lists. "That doesn't necessarily mean the 'Buy American' thing is for real," he said, "but at least people are giving American cars a new look, and that certainly emanates from the trade talks" in January, when President Bush took the Big 3 chairmen with him to Japan.

Ray Shepherd, chairman of Ray Shepherd Motors Inc. in Fort Scott, Kan., thinks there's "a definite resurgence in interest in domestic vehicles." He should know. Shepherd has Chevrolet, Pontiac, Oldsmobile, Buick, Cadillac, GMC, Ford, Lincoln, Mercury, Dodge, Chrysler and Plymouth franchises. Plus Toyota.

Kirnan said fleet sales for GM are running about 8 percent below last year and "certainly less than 40 percent" of total car sales. A GM spokesman confirmed that GM's fleet sales are "less than one-third" of the car mix so far this year.

At this time last year, fleet sales were accounting for more than 50 percent of industry sales, said Joel Pitcoff, Ford's research and analysis manager.

There were 8 selling days in the period this year and 8 last year.

Inventory table > 81

January inventories rise despite sales surge

Car and light-truck inventories swelled in January despite a late-month sales surge.

The industry had an 87-day supply of cars and light trucks on Feb. 1, up from 76 a month earlier.

Car inventories crept up to 85 days from 78. Truck inventories — which had been thinned by a year-end pickup sales race between Ford and Chevrolet — jumped to 91 days from 73 on Jan. 1.

Ford Division reported a 111-day supply of pickup trucks, compared to 37 days a month earlier. The Chevrolet pickup supply was 114 days, up from 66.

The largest Japanese-based companies generally had thinner inventories than the Big 3. One exception was Nissan Motor Corp. in U.S.A., which rose to 120 days from 96.

Hummer looks for a few good dealers

PETER BROWN
Editor

DALLAS — Dealers: If you want a new franchise that definitely won't cannibalize sales from your other lines, AM General Corp. has a deal for you.

You can sell the Hummer.

The "street-legal" version of the Persian Gulf workhorse was on display at the Dallas convention of the National Automobile Dealers Association, where AM General was recruiting dealers.

The company plans to sell the wide-track, high-perched Hummer to the public through 30 dealers beginning in June, says Phillip Potter, manager of dealer operations for AM General. Ten more dealers will be added by year's end, and another 10 by next June, Potter said.

He said plenty of dealers showed interest at the convention.

Potter hopes for sales of five to eight Hummers per month per dealer, chiefly to commercial customers such as oil companies or utilities.

But there are also individual customers. The target, Potter said, is the "country yuppie," an outdoor person with the income to buy a vehicle expected to be priced at $40,000 to $55,000.

The Hummer is not for every taste. To create a 16-inch ground clearance, its drivetrain runs longitudinally between the two front and two rear seats. The company says that at 85 inches, it is only seven inches wider than a big station wagon.

A 6.2-liter General Motors diesel engine generates 150 horsepower at 3,600 rpm, and a high-grunt 250 pounds-feet of torque at just 2,000 rpm. EPA ratings for the 6,200-pound vehicle are 13.2 mpg in the city and 13.6 mpg in highway driving, Potter said.

AM General spokeswoman Susan Carney said the company is building 57 Hummers a day at AM General's plant in Mishawaka, Ind., chiefly for military and international customers. That can be increased to as many as 200 a day, she said.

AM General is not requiring dealers to have a separate showroom.

DALLAS

in brief

SERVICE

MEMA offers toxics labeling

ENGLEWOOD CLIFFS, N.J. — The Motor and Equipment Manufacturers Association is offering its comprehensive toxics labeling compliance service.

The program helps group members who use or sell toxic chemicals or materials to comply with state and federal environmental laws. A quarterly newsletter supplies general information on compliance, including lists of covered substances.

In addition, urgent information is provided in "Flash Updates," and members also may address specific questions and problems to compliance experts at MEMA's Washington office.

Annual cost is $250 for members. For more information call (201) 569-8500.

GM to eliminate paper catalogs

DETROIT — General Motors will supply its dealers with only microfiche or electronic catalogs after September 1993.

"Although paper catalogs will still be available prior to the 1994 model year, we're recommending GM dealers start investigating whether microfiche, electronic catalogs or both will best fit their needs," said Edgar Smith of GM's Service Parts Operations.

Nissan revises parts marketing

CARSON, Calif. — Nissan Motor Corp. in U.S.A. has restructured its parts and service marketing unit within its Operations Support Group.

The group was formed last October to consolidate services that had been within a parts and service division.

The changes organize the marketing unit around four categories:

- Collision repair products will focus on market-responsive pricing and integrated marketing. Tim Gregart has been named manager.
- Accessory products will integrate marketing efforts with divisional and regional vehicle promotions for options such as air conditioning and audio systems. Kevin Thompson has been named manager.
- Service products includes remanufacturing, maintenance and repair products and will emphasize programs to enhance owner loyalty. Bob Sergi is manager.
- Assurance products will integrate warranty, maintenance contracts and extended service products. Craig Adrian is manager.

"The emphasis of the new structure is to build subject experts by product lines, promote long-term focus on positive ownership experience and increase responsiveness to market changes," said Peter Bossis, parts and service marketing manager.

The changes bring the unit in line with organizational strategies in the Nissan and Infiniti divisions' marketing departments. ■

GM waits on parts markup

Decision expected by '93, Rock says

PHIL FRAME
Staff Reporter

DALLAS — By the end of the year, General Motors is expected to start paying dealers more for the parts they use in warranty repairs, said Ray Green, past president of the National Automobile Dealers Association and NADA Chevrolet line representative.

GM executives acknowledge that they will have to close the gap between the wholesale rate now paid — roughly cost plus 30 percent markup — and the retail rate NADA seeks.

GM Vice President John Rock, head of the customer sales and service staff, also said the company hopes to announce its intentions on warranty parts markup before 1993. He said GM hasn't decided what to do, but finances will not permit the company to raise the reimbursement rate now.

GM executives had hinted that some announcement might be made early this year, and some observers had expected action at NADA's annual convention last week.

Green said he can't talk about GM's plans for warranty parts markup. He said he expects GM to reveal its plans "by the end of the year."

> ‘I don't think the manufacturer has any money to do anything now.’
>
> RAY GREEN
> NADA PAST PRESIDENT

Green said the recession is the reason GM didn't act on the issue at NADA. "I don't think the manufacturer has any money to do anything now," he said.

Warranty parts reimbursement has been a key issue for NADA since it released a study last June showing that the average dealership would get about $63,000 a year more if dealers were paid retail rates for parts used for warranty repairs.

Rock said the corporation considered tying warranty parts reimbursement rates to the dealership's customer satisfaction index rating.

Dealerships with good CSI ratings could get markups as high as cost plus 90 percent for warranty parts while those with poor CSI scores would continue to get about cost plus 30 percent.

But Rock said GM dropped the idea after dealers complained that CSI ratings don't always distinguish whether problems are caused by the manufacturer or the dealership. ■

'Green' service systems dominate exhibit hall

MAX GATES
Staff Reporter

Van converters, computer programmers, and finance and insurance packagers were in Dallas in numbers, but environmental protection was the emerging theme at the NADA exhibit halls.

Disposal systems for used oil, old anti-freeze and air conditioning refrigerants — ranging from waste haulers to on-site refiners — were being promoted, reflecting the new concern for environmental issues.

The key issue is how to dispose of the range of potential pollutants that a dealership generates. Handling those substances is costly, and even when it's done right, dealers can remain exposed to potential liability long after the wastes have been hauled away from the dealership.

The wide range of displayed products offered dealers the potential to cut disposal costs, save money on heating and electricity, and add profitable new recycling and reclaiming services to their operations.

Marketers promised payback times of two years or less on equipment ranging up to $10,000 or more.

Dealers might even generate some positive public relations by touting their environmentally conscious operations, noted Mary Burnett of Waste Energy Inc. of Sarasota, Fla.

"Dealers not only avoid the potential liability of disposing of wastes, but they also get the good PR of being concerned for the environment," Burnett said.

Waste Energy's line of Goldfire products included rerefining equipment that converts used oil, solvents and other petroleum-based products into No. 2 diesel oil. That can be sold, used in cars and trucks or burned in Goldfire's electrical generators to cut electricity costs.

Waste oil heaters have evolved from pot-bellied stoves in "mom and pop operations" to today's

N★A★D★A
DALLAS

thermostatically controlled, 4,000-plus BTU units, said Bill Forbes of Lenan Corp. of Janesville, Wis., which markets Recyclit waste oil heaters.

In his area of the country, waste oil heaters can pay for themselves in reduced heating bills and hauling fees in one year, Forbes noted.

Among the environmental products on display were:

- BG Products Inc., of Wichita, Kan., showed a recycling unit that cleans the anti-freeze from a 19-quart system in less than three minutes.
- Lube Cube of Severn Park, Md., had above-ground double-walled containment systems for storing used oil.
- Ford Rotunda showed a wide range of equipment including parts washers, waste water recyclers, and a crushing machine to get oil out of used filters.
- Better Engineering of Baltimore, Md., displayed its parts washing machines that use biodegradable detergents and water.
- Safety-Kleen Corp. of Elgin, Ill., offered a variety of educational and training seminars to help dealers comply with federal environmental regulations. "These are hot issues with the dealers," said Linda Schleifer of Safety-Kleen.
- Kleer-flo of Eden Prairie, Minn., touted its custom-designed solvent reclaimers, anti-freeze recyclers and brake washing equipment, which it has custom-designed since 1936.

BG Products Inc.
GM
APPROVED

JOE WILSSENS/AUTOMOTIVE NEWS

Galen Myers, left, executive vice president of BG Products Inc. of Wichita, Kan., demonstrates a coolant recycling machine to Don Rydma, owner of Don Rydma Chevrolet-Oldsmobile in Whitehall, Mont.

The phase-out of CFC-based refrigerants by mid-decade will create a double demand on dealers, who will be dealing with two incompatible products — old-style R-12 refrigerants that will remain in older model cars and the new R-134a refrigerants that will replace the CFC-based chemicals, said Robert Wiegard of Kent-Moore Tool Group of Warren, Mich.

Concern for the environment extended to the inside of cars as well, with a new product called Airsept. The product is designed to kill the molds, mildew and bacteria in air conditioners that can cause odors and allergic reactions.

The three-stage treatment protects against odors for one year, according to marketer Myron Stein of Tucker, Ga. It has a suggested price of $69 to $99, depending on dealer location and other costs. ■

Chrysler sponsors trouble shoot contest

DETROIT — Chrysler Corp., in conjunction with the American Automobile Association, will sponsor the 1992 Trouble Shooting Contest.

The contest was previously known as the Plymouth/AAA Trouble Shooting Contest, which Plymouth started in 1949.

The competition begins this month with written tests. State champions will meet in June at the Chrysler Technology Center to duel for the national title.

Service business drops in '91

DETROIT — Service and parts business surged in December, but the gain wasn't enough to prevent the Automotive News Service Index for 1991 from slightly trailing 1990.

Dealers' service and parts business in December was 107.2 percent of that recorded in December 1990, the largest year-to-year monthly increase in 1991. All five categories of the Service Index showed gains, led by repair orders written, up 8.8 percent. Sales of all parts and accessories rose 7.5 percent, and gross profit on all sales of labor, parts and accessories rose 6.5 percent.

For 1991, service and parts business was 99.4 percent of the amount recorded for 1990.

Slight annual gains were posted in shop parts sales, up 1.6 percent, repair orders written, up 0.8 percent, and labor sales, up 0.1 percent. But sales of all parts and accessories declined 1.0 percent for the year, and gross profit on all sales of labor, parts and accessories was down 0.6 percent.

Figures used in the Automotive News Service Index are compiled from a cross-section of new-car dealerships. ■

SERVICE INDEX
107.2★

	Dec., '91 vs. Dec., '90	Jan.-Dec., '91 vs. Jan.-Dec., '90
Gross Profit on All Labor and P&A Sales	+ 6.5%	− 0.6%
Repair Orders Written	+ 8.8%	+ 0.8%
Total Labor Sales (Customer & Warranty)	+ 5.1%	+ 0.1%
Shop Parts Sales (Customer & Warranty)	+ 5.0%	+ 1.6%
Sales of All P&A	+ 7.5%	− 1.0%

★ Survey by Automotive News shows that dealers' service and parts business in December 1991 was 107.2 percent of business in December 1990. Service business in 1991 was 99.4 percent of business in the corresponding period in 1990.

Canada car sales dip; trucks rise in January

ANNE E. WRIGHT
and JEREMY SINEK
Automotive News

Light-vehicle sales fell 5.3 percent in Canada last month. Truck sales rose, and car sales dropped.

Automakers sold 78,375 cars and trucks in January, down from 82,780 a year ago. Each of the Big 3 lost sales. But year-to-year comparisons are distorted because of a Jan. 1, 1991, tax change that led to a small boom in car sales.

At that time, Canada dropped a 13.5 percent wholesale tax on manufacturers and added a 7 percent goods and service tax to the final selling price. The change induced fleets to delay car purchases until after the new year, when prices declined an average of about 4 percent. Truck sales improved this year compared with a poor month last year.

Last month's truck sales were up 7.3 percent. Among the gainers were: Chrysler, 0.8 percent; Ford, 18.7 percent; General Motors, 3.7 percent; Mazda, 40.2 percent; and Nissan, 20.2 percent.

Car sales dropped 10.8 percent. General Motors was off 6.1 percent; Ford Motor Co., 23.1 percent; and Chrysler Corp., 36.1 percent.

Chrysler car and truck sales were off 21.3 percent. But Larry Latta, general sales manager at Chrysler Canada, called last month's figures "an anomaly" because of substantial fleet deliveries. "Our January 1992 retail vehicle deliveries actually increased 5 percent," he said.

Car importers, which do less fleet business, scored gains in January. Imported car sales in Canada were up 5.3 percent. Gainers included BMW, up 13.3 percent; Mazda, 67.2 percent; Nissan, 77.7 percent; and Suzuki, 36.4 percent. AN

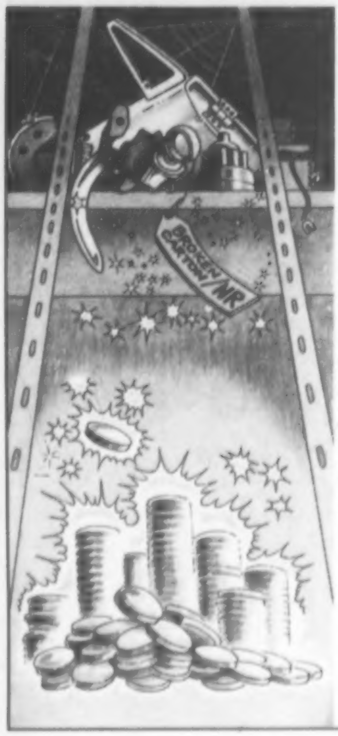
Turn Dust into GOLD!



Turning your non-returnable dusty old parts into cash is easy.

Just sell them through PartsVoice, the nation's largest independent parts locator service (listing 2,000+ dealer inventories).

With any touch-tone phone, dealers can locate parts FREE!

Try it yourself: simply call toll-free 1-800-328-8766 and use 88 + telephone area code as your password. Parts buyers will call PartsVoice over 1,500,000 times in 1992.

They could be buying parts in your inventory. Call us today, and watch your 1992 parts sales grow.

Sales brighten for European luxury cars

LINDSAY CHAPPELL
Staff Reporter

European importers enjoyed a comeback in January.

Porsche sales, for example, shot up 82.2 percent to 419 units. But that was compared with a terrible January 1991 when sales were down 65.2 percent and totaled only 230. That month set the tone for a year plagued by recession and a new U.S. luxury tax.

BMW sales rose 42.7 percent in January, helped by a more plentiful supply of its new 325, which starts at less than $30,000. Sales of 5-series (starting at $35,600) and 7-series models ($52,990) also were up.

"The psychological barrier seems to be $40,000 for the luxury tax," said BMW spokesman Tom McGurn. "Under that, people don't seem to worry so much about it." The tax is 10 percent on the portion of the transaction price that exceeds $30,000.

Other European makes also gained in January. Mercedes-Benz rose 30.3 percent; Audi, 28.1 percent, and Jaguar, 23.5 percent. Each fell significantly a year ago.

But as the Europeans rose, so did the Japanese high-end lines. Lexus sales increased 125.3 percent; Infiniti was up 31.2 percent; and Acura rose 2.5 percent.

Overall, imported car sales were up 6.4 percent.

DOMESTIC

It's not always easy to classify cars

continued from PAGE 4

cord as an import. That's because Honda also imports Accord sedans from Japan. And when the U.S. and Japanese versions are combined, the average North American content of all Accords is less than 75 percent.

What about import duty as a standard? It's nearly impossible to track because virtually every vehicle sold in the United States pays it. Customs charges duty on imported parts and components. So if a vehicle has 5 percent imported content, duty is levied on that 5 percent. The duty rate on cars is 2.5 percent of the foreign content; on trucks it's 25 percent.

Finally, at a time when Ford builds a Mazda and Mazda builds a Ford, Aunt Millie and Uncle Ned could use a scorecard noting what cars are built by someone else. It appears in a separate table below.

For the record, *Automotive News*, in its industry statistics, counts all vehicles assembled in the United States or Canada as "domestics." But even that's not as easy as it seems. Our domestic figures also include some Mexican-assembled models such as the Buick Century and Ford Escort. Why? Because when the same vehicle is built both in a U.S. plant and a Mexican plant, the Big 3 refuse to separate the numbers.

BUILT FOR RESALE

Models that are built by a joint venture or by an automaker other than the selling company.

Vehicle	Maker
Geo Metro	GM-Suzuki
Geo Metro convertible	Suzuki
Geo Prizm	GM-Toyota
Geo Tracker	GM-Suzuki
Dodge Colt	Mitsubishi
Dodge Stealth	Mitsubishi
Eagle Summit	Mitsubishi
Eagle Talon	Mitsubishi
Ford Festiva	Kia
Ford Probe	Mazda

Pontiac LeMans	Daewoo
Subaru Legacy (U.S.)	Subaru-Isuzu
Suzuki Swift (Can.)	GM-Suzuki
Suzuki Sidekick (Can.)	GM-Suzuki
Toyota Corolla (U.S.)	GM-Toyota

DOMESTIC AND IMPORT CLASSIFICATIONS BY VEHICLE

First column lists cars and light trucks for sale in United States, arranged by make. Models in italics are made by a different automaker than the seller or by a joint venture. Vehicle names are repeated for models sourced in more than one country. * indicates that the EPA views the combined fleet of such models as imported; ** indicates the EPA treats the combined fleet as domestic.

Second column lists country where vehicle was assembled. For vehicles assembled in Canada, the "D" following the country means vehicle has 50 percent or more U.S. and Canadian content and is considered domestic by U.S. Treasury Department; "I" indicates less than 50 percent.

Third column is based on EPA fuel economy rules for domestic and import fleets. "D" indicates vehicle has 75 percent or more Canadian and U.S. content; "I" indicates 75 percent or less; "?" indicates manufacturer has not announced content details.

Example: Toyota Corolla sedans built in Canada are treated as domestic by U.S. Treasury and treated as an import by EPA. Also, EPA considers all Corollas together to be imported.

Erasable chip could save inventory

ROGER ROWAND
Staff Reporter

Electronic wizardry is putting another tool in the hands of those who service cars that rely on increasingly exotic computer control. Researchers have found a quick and easy electronic way to change the memory that is tucked away inside each onboard computer.

Computer chips are calibrated so a car will achieve certain operating levels in terms of performance, fuel economy and exhaust emissions. By changing chips, a car's engine characteristics can be modified, such as to boost power or curtail emissions.

Until now, such changes have required replacing the main programmable read-only memory, or PROM, chip.

Also, just keeping standard chips on hand as replacements requires a huge inventory. General Motors alone has some 7,000 different PROM calibrations.

"Obsoleting an engine or transmission because of a software change soon will be history," said Dennis E. Florence, executive engineer of electrical and electronic engineering at Chrysler Corp. "Dealerships will benefit from this advancement in software because inventory of computer modules will shrink drastically," he said. Stocks can consist of general modules that can be programmed as needed.

Actual reprogramming of the new electronically erasable PROMs, called EEPROMs, takes about 20 seconds, he said. Replacing a computer module requires about an hour.

EEPROMS are being installed already on 1992 Chrysler Corp. cars with the 2.2-liter and 2.5-liter turbocharged four-cylinder engines and on the company's California cars and minivans with V-6 engines. Chrysler expects to have the new technology in about 1.2 million vehicles by the close of the 1993 model year.

The eraseable chips are going into a handful of 1992 GM models, including the Geo Storm and Chevrolet Corvette. More will be added in 1993. GM has told its dealers they will be required to have chip reprogramming capability by the 1993 model year.

Ford Motor Co. will start installing EEPROMS in 1993 with across-the-board installation by 1996, according to Len Tedesco, service systems design program manager. Ford's service bay diagnostic system will be used in reprogramming the chips.

As usual in electronics, experts say the EEPROMs are more reliable than older PROMs because they have fewer components and pack more power in less space.

BMW AG has just begun using an even more advanced form of the chip that includes a microcontroller and EEPROM.

Saturn outlets post highest sales average

KAREN DETKOWSKI
Statistician

Saturn dealers returned to the top spot in the *Automotive News* sales-per-dealer ranking for January.

Saturn dealers averaged 83 sales per outlet, 16 more than in December.

The rise in the Saturn average was due to a 28.5 percent sales increase from December to January, when deliveries totaled 10,204.

Lexus dealers slipped to second place in January as their average dropped to 56 per dealer. Nineteen other makes declined for the month.

Eleven makes posted increases in the January calculation, including Volvo, which rose fron nine to 14 sales per outlet.

Dealers praised Volvo for offering an attractive leasing program on 240-series models (story on Page 40).

And Bob Austin, public relations manager for Volvo Cars of North America, gave some credit to the new year:

"There was much more showroom traffic than in November and December," he said. "The consumer is so happy to be out of 1991."

Saturn, Mazda and Infiniti were the only makes in the top 10 to show increases in dealer sales averages in January.

Six of the top 10 were down, and one remained the same as in December.

Dealers had 26 selling days in January compared to 25 in December. AN

SATURN

Pace for production, retailing picks up

continued from PAGE 1

Some Chevrolet dealers are especially interested in selling Saturns at their stores.

Hudler told his dealers last week that GM has no plans to rebadge the cars for sale by another division. But a dealer said that Hudler also told the group that they can make sure rebadging isn't an issue by opening more outlets and selling more cars.

The Saturn plant is producing 900 cars a day on two 10-hour shifts. In a normal four-day week, the yield would be 3,600 cars. With the fifth day, output grows to 4,500 cars a week, or about 216,000 in a 48-week year.

Cars would start piling up because their channel into the marketplace is too narrow — there just aren't enough Saturn outlets to handle the flow.

The average Saturn dealer sold 83 cars per outlet in January — the highest per-store vehicle sales in the industry and 16 more cars per outlet than December. (See story on Page 81.)

Saturn sales were up 28.5 percent from December to January, when the make eclipsed 10,000 sales in a month for the first time. Sales began in October 1989.

As one of its most innovative features, Saturn grants a dealer an entire market area, which he or she can develop without competition from another Saturn dealer. Hudler said between 25 and 30 dealers already have more than one Saturn store.

"We need to be attracting new retailers in areas we haven't got to yet as well as expanding market areas," LeFauve said.

"There were a couple guys holding back," he said. "What we said was, now we're able to produce that kind of volume consistently, we needed to encourage them to go off and build those second or third stores. They needed encouragement, and they're with us all the way."

A recently completed corporate quality audit showed that the Saturn plant was building only 2.9 defects per car (2.0 is considered exceptionally good) at a 900-per-day rate, Michaud told *Automotive News*. That was the same result of an audit late last year when the plant was building 500 cars a day, Michaud said.

LeFauve and Saturn dealers take that as an encouraging sign that the plant can build at high volumes with consistent quality.

Saturn dealers seem to be satisfied. In a recent study of dealer attitudes, J.D. Power and Associates said Saturn ranked second only to Lexus in its Dealer Satisfaction Index. Saturn was the only domestic nameplate in the top 15.

"Now there's a lot more confidence because of what's happening at the production level," said Stuart Lasser, owner of Saturn of Denville, N.J. "Everybody's saying, 'OK, now it's time to step up and build that second facility, that third facility' to meet those production demands."

Lasser said he will accelerate his plans to expand. He said he plans to have one or two more outlets before the end of the year.

GM President Lloyd Reuss attended the Saturn meeting to reiterate GM's continued strong support for Saturn, despite GM's financial trouble. AN

INCENTIVE WATCH — CUSTOMER INCENTIVES

CONTINUING PROGRAMS

Model	Incentive
CHRYSLER CORP.	
Expires March 31. Finance rates in lieu of rebates from zero to 9.9 percent.	
1991-92 models	
Chrysler New Yorker Fifth Ave., Imperial	$1,500
N.Y. Salon, LeBaron sedan	$1,000

Mitsubishi hikes spiffs in Michigan

Mitsubishi Motor Sales of America Inc. was the only auto firm to announce a new incentive program last week.

Dealers in Michigan are getting a big break, reportedly because of the speech Richard Recchia, the company's executive vice president, delivered to the National Automobile Dealers Association convention. He feels Michigan dealers have been hit hardest by anti-Japanese sentiment.

Dealers in Michigan are receiving rebates of $1,700 on sales of 1992 Eclipses and $1,000 on 1990-92 Galants, Mirages and pickups.

In comparison, dealers in Pennsylvania are getting $750 on the Eclipse and must sell 24 units to equal the Michigan dealers' incentives on the Galant, Mirage and pickups. Other regions are in line with the Pennsylvania program.

The program ends March 30 for all regions.

Iran lets individuals import cars

NICOSIA, Cyprus — Iran has lifted a 10-year ban on private importation of vehicles by individuals, and an official estimates that as many as 10,000 cars will be imported in the next two months.

The official Islamic Republic News Agency, in a dispatch monitored here, said selected makes will be permitted, including Mercedes-Benz, BMW, Volkswagen, Peugeot, Volvo, Mitsubishi, Honda, Subaru and Toyota.

Iran recently signed agreements with France's Peugeot Group and Britain's Bedford to build assembly plants in Iran.

The development comes as President Hashemi Rafsanjani works to rebuild bridges with the West as he seeks badly needed investment.

The news agency quoted Mohammad Cheraghi, the Iranian commercial attache in Dubai, as saying the auto imports are being allowed because spare parts and repair services for them are now widely available in Iran.

The new regulations allow Iranian residents of Gulf Arab states, particularly the United Arab Emirates, to ship the latest models of permitted cars back home for the next two years.

XEDOS

Mazda moves into luxury segment

continued from PAGE 3

used for Mazda's entire luxury lineup in Europe.

A Mazda distributor said Xedos models will be a "special kind of product sold through a select number of dealers" with proven sales histories and high customer satisfaction ratings

He said dealer numbers will be determined on a country-by-country basis by local distributors.

"A small showroom will not qualify," the Mazda distributor said.

"Initially, the Xedos volume will be too small to ask for separate showrooms. However, there will be significant investments. The dealers must offer superior after-sales service and service facilities," the distributor said.

The Xedos 6 will be badged as a Xedos Mazda with a small Mazda badge on one corner of the car.

"It will not be a separate," said the distributor.

The sedan will be offered with a 160-horsepower, 24-valve, 2.0-liter 4-cylinder engine and will be priced to compete against such lower-rung German sedans as the BMW 320 and Audi 80.

At 181 inches long with a 102.8-inch wheelbase, the Eunos 500 is comparable in size to the small German sedans. By comparison, the 1992 BMW 325i sedan is 174.5 inches long and rests on a 106.3-inch wheelbase.

FULL RANGE PLANNED

But another range of cars is under development, said the distribution source.

"The idea is for Mazda to offer a full range of luxury cars with the Xedos 6 being the first," he said.

"A V-12 is in the plan but it could also be axed if conditions change," the distributor source said.

If developed, the 4.0-liter V-12 will be fitted into a future Xedos range-topping sedan that also will serve as the Amati flagship in the United States.

Mazda's strategy is driven by concern that its European volume could be frozen at current levels because of last year's accord between Tokyo and the EC.

The accord caps imports at their current level of about 1.2 million units a year and caps local production at 1.2 million units through 1998.

Combined production of the Nissan, Toyota and Honda plants in the United Kingdom likely will surpass 1 million units by 1995, leaving Mazda with little chance to build volume through local production.

It currently is holding talks with Ford about consigned production of an Escort-based, Mazda-badged model at Ford's Saarlouis, Germany, plant.

"The big problem for Mazda is still the limited number of cars it can receive," the distribution official said.

Company officials in Japan say that Europe is well-suited for the luxury-car push because the Mazda brand image is higher there than in either the United States or Japan.

Mazda would not comment on its European plans, but Keiji Asano, senior managing director for overseas marketing and sales, said the company is wrestling with how to sell its future luxury models there. He said that either the Mazda name or another could be adopted in Europe. AN

GM, Ford to match suppliers' rebates

CHRIS ESCHENBURG
Special Correspondent

DETROIT — General Motors and Ford Motor Co. strengthened the "Buy American" movement last week by announcing separate programs to match suppliers' employee incentives for the purchase or lease of a new vehicle.

Pais: saying thanks

"A number of GM suppliers recently have offered purchase assistance programs to their employees to help get the economy going and to help boost sales of new GM vehicles," said Donald Pais, GM vice president in charge of the materials management staff.

The number of supplier programs is small but growing. A GM spokeswoman said most of the response is expected from 3,400 key suppliers.

A Ford spokesman said the company contracts with about 2,600 suppliers in North America.

GM and Ford will end their programs June 4.

A GM spokeswoman said no ceiling has been placed on the amount GM will match, but it will be limited to any reasonable amount, adding, "$1,000 would be considered reasonable."

Ford's limit is $1,000.

Both programs are in addition to any previously announced incentives.

Pais said, "We're appreciative of these programs and of the partnership spirit we've been developing with our suppliers. This matching fund program is our way of saying, 'Thanks.'

Trucks pull up numbers

ANNE E. WRIGHT
Chief Statistician

U.S. and Canadian car and truck production is leading the 1991 pace by 5.9 percent. So far this year, makers have assembled 1,276,314 vehicles, compared to the 1,204,861 one year ago.

Truck production continues to spark the increase; car production is down 7.2 percent.

Truck producers in the United States have assembled 408,500 vehicles this year, 23.7 percent above 1991.

Truck producers in Canada have built an estimated 142,927 trucks, 52.3 percent ahead of the year-ago total.

Last week, truck production in the United States was scheduled at 72,061, up 3.0 percent from the prior week and 50.8 percent above the year-ago week.

In Canada, last week's estimated truck production was 11,197, down 3.7 percent from the prior week but up 52.6 from last year.

Year-to-date, U.S. car production is 632,914, 4.9 percent behind 1991, while Canadian carmakers have assembled 91,973, down 20.1 percent from 1991.

U.S. automakers' estimated car production last week was up 3.3 percent from the prior week and was 34.1 percent over the year-ago week. In Canada, car production slipped 6.0 percent from the prior week and 25.0 percent from the 1991 week.

Last week's estimated daily-build rate was 42,842 cars and light trucks, 1.9 percent over the prior week and 35.2 percent over the year-ago week when 11 plants were idle because of slow sales.

Hyundai Motor Corp. was forced to halt production at its Bromont, Quebec, facility due to a shortage of parts caused by a strike at the company's factory in Korea, which supplies 55 percent of the parts.

The plant will be idle four weeks. Production is scheduled to resume March 16.

Mazda Motor Manufacturing (USA) Corp. built out 1992 models last Friday at the Flat Rock, Mich., plant. Job 1 for the 1993 MX-6 is scheduled for Feb. 24. Production of the 1993 Ford Probe, its sister car, is slated to begin in April.

Changeover for the 1993 Mazda 626 will be completed in March.

Overtime was scheduled last Saturday at the following General Motors truck facilities: Baltimore; Scarborough, Ontario; and Oshawa, Ontario.

GM's Janesville, Wis., plant worked overtime on the Suburban, Jimmy and Crew Cab lines last Friday and Saturday.

Ford Motor Co. ran daily overtime last week at the Louisville, Ky., and Kansas City, Mo., truck facilities. The Kansas City plant also worked last Saturday.

Chrysler Corp. scheduled Saturday overtime last week at the St. Louis (No. 2) plant for the sixth consecutive week. The plant produces the Chrysler Town & Country, Dodge Caravan C/V, Dodge Grand Caravan and Plymouth Grand Voyager minivans.

Ohio bank copies VW idea

COLUMBUS, Ohio — Consumers who finance vehicle purchases or leases through Huntington National Bank and later lose their jobs will have their vehicle payments paid by the bank for up to six months.

The "Unemployment Payment Assistance Plan" covers payments up to $500 a month on any new or used vehicle. Consumers must provide an affidavit from their former employer saying the job loss is for economic reasons. Also, consumers must be eligible for unemployment benefits.

The plan, which is similar to the incentive pioneered by Volkswagen of America Inc., is good on vehicles purchased between Feb. 20 and April 30.

The bank said it is working with dealers in Ohio, Kentucky and Indiana.

GM scuttles value guide

DETROIT — General Motors has halted publication of its monthly *General Motors Used Vehicle Guide* for dealers with the February edition.

Bohn battles Porsches

Workers side with their boss

DIANA T. KURYLKO
Staff Reporter

FRANKFURT — Arno Bohn late last week unveiled a trump card in a power struggle to continue as chairman of Porsche AG after the carmaker's controlling families failed in a bid to hire Wolfgang Reitzle, a senior BMW AG executive, to replace him.

After the Porsche board on Thursday denied him the two-thirds majority needed to renew his contract, the 44-year-old Bohn threatened to leave immediately if he is not given the vote of confidence he needs by Friday.

The departure of Bohn, whose contract expires Sept. 30, would leave the company without a chief executive — or any immediate candidates — during a time of great uncertainty.

The ultimatum may be moot, however. Bohn controls 50 percent of the votes on Porsche's board, enough under German law to keep his job on a second vote by Porsche directors.

Bohn's strength stems from his *support from Porsche's white- and* blue-collar workers, who control half the seats on Porsche's supervisory board.

Last week, the powerful IG Metall union publicly urged Bohn's reappointment, saying a change of chairman now would be bad for the company's 9,000 employees. More than 800 employees demonstrated to support Bohn the day the supervisory board met.

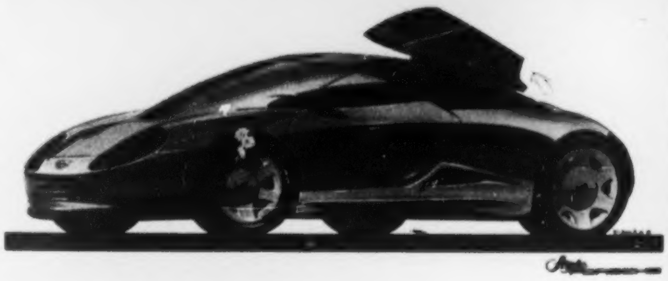
Bohn used the union sentiments in issuing his ultimatum.

"I consider the continuing speculation over the filling of the job as management board chairman of Porsche AG as damaging for the company and have demanded a decision on my reappointment by Feb. 28, at the latest," Bohn said in a statement.

"Otherwise, I am not ready to accept renewal of my contract."

In a telephone interview Friday, Bohn said he wants to remain chairman despite last week's tur-

see PORSCHE, 36



HANS G. LEHMANN

Caught in the crossfire

Porsche AG Chairman Arno Bohn, right, is battling the company's owners over product strategy. Honorary chairman Ferdinand Porsche wants a large, expensive Porsche 989 (top), while Bohn wants a higher-volume, lower-priced 986 sports car (above). Bohn's contract was not renewed, but he has support from the company's blue- and white-collar workers.

'123 Ford' program fizzles

Fewer ex-rental cars available for test lots in four cities

KATHY JACKSON
Staff Reporter

Ford Motor Co.'s test dealerships to sell only program cars may fizzle out by the end of summer.

Dealers say Ross Roberts, Ford Division general manager, told them at winter meetings that the four test stores are losing money and the factory probably will dump the project in six months.

Since the first two "123 Ford" stores opened last April, Ford has cut back on the number of program cars that it sells to and then buys back from daily rental companies.

One store says it is profitable, but an employee at the store in Louisville, Ky., said, "You don't make money selling 17 vehicles a month."

Bill Stang, vehicle distribution director for Ford, says the company will not make a decision until the first stores have been in operation at least a year. "We're kind of holding our decision until late April," Stang said.

Cancellation appears to be inevitable.

Last week, Ford officials were at a test dealership, owned by Richardson Ford and Turner Ford in Albuquerque, N.M., "to look at the situation," according to an employee at the store. "We may only have until June. Sales have peaked out; they've tapered off."

Ford opened the stores last year in an effort to dispose of the huge number of the nearly new program

Roberts: brought word to dealers

Japanese raising prices to head off trouble

JOHN K. TEAHEN JR. and KRISTINE STIVEN BREESE
Automotive News

Two Japanese makes have raised prices, and others are getting ready to follow suit in an effort to dodge the political flak that surrounds the tense U.S.-Japan trade situation.

Toyota and Lexus divisions of Toyota Motor Sales U.S.A. Inc. were the first to act on prices. Both cited appreciation of the yen against the dollar in announcing their sticker hikes. It appears that will be the party line for all the Japanese makers.

The yen-dollar exchange rate casts a cloud on that argument. The yen has risen 7 percent against the dollar since last June. But the Japanese (and others) have had a price increase since then — the 1992 intro boost. Since the 1992 model year began Oct. 1, the value of the yen has risen only 3.5 percent — from 133.20 to the dollar to last Thursday's 128.70.

Insiders at the Japanese companies, who asked not to be identified, suggest another reason for the price increases.

They acknowledge that the current round of increases are very much a part of the sensitive trade situation between the United States and Japan, and they say the Japanese are raising their prices to give the domestic Big 3 a competitive break.

Said a high-level sales execu-

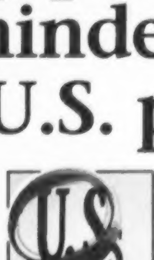
Subsidiary plants, fuel law hinder push for U.S. parts

LINDSAY CHAPPELL
Staff Reporter

Two hard truths hang over Japanese automakers' pledges during President Bush's trade mission last month to commit to an additional $2 billion in U.S. parts purchases.

- U.S. suppliers lose some sales because of U.S. fuel economy rules.
- Japanese parts firms with U.S. plants stand to benefit more than traditional U.S. parts companies.



While the U.S. government and auto industry push Japanese automakers to buy American, U.S. fuel-economy rules are thwarting progress. The rules discourage Japan's U.S.-built models from having more than 75 percent North American (U.S. and Canadian) content.

The North American content on the 1993 Nissan Stanza replacement, for example, will be held to about 70 percent. That's because under U.S. rules, the Stanza will remain in the firm's "import" fleet if its content level is less than 75 percent. And since the car will exceed the federal standard of 27.5 mpg, it will help offset the drag on its fuel-economy averages provided by such cars as Nissan's Infiniti Q45. (See story, page 9.)

Traditional suppliers who have no Japanese business yet are likely to lose out.

Because pressure on the Japanese to buy U.S. parts is so intense, the companies are likely to go to suppliers they know best — specifically, Japanese-affiliates with U.S. plants.

Already, the large increase in Japanese spending on U.S. parts in recent years has been shared — sometimes dollar for dollar — with Japanese parts makers who have built U.S. plants. While that provides new U.S. jobs and investment, the trend also threatens the "traditional U.S. suppliers"

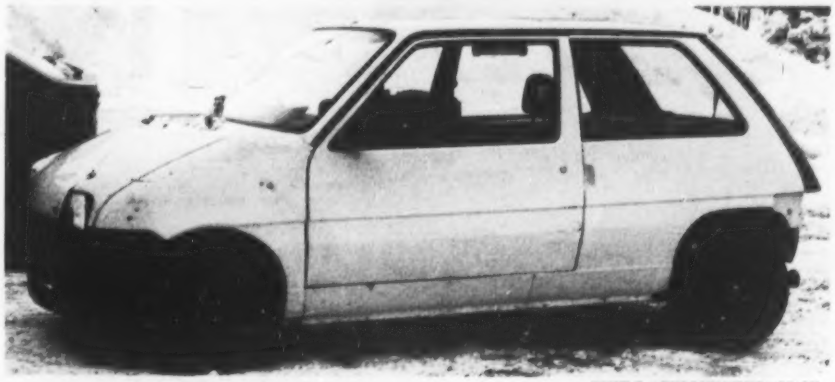
correction

A table in the Feb. 17 issue mislabeled the North American content status of the Pontiac Grand Am. The Grand Am is classified as a domestic car.



HANS G. LEHMANN/HIDDEN IMAGE

Renault's mini

The X06, Renault Group's belated entry in Europe's emerging "starter-car" segment, was recently caught during cold-weather testing in Scandinavia. Power for the mini hatchback is from a 1.1-liter four-cylinder developing 49 horsepower. The X06 will debut in 1994. PSA Group and Fiat Auto entered the segment last year with the Peugeot 105 and Fiat 500.

dealers for auction prices on used company cars and rental vehicles.

GM will save $250,000 annually, according to industry officials.

Dale Hermiller, newly appointed executive director of vehicle redistribution, said it is no longer cost effective to publish the guide.

But he said the automaker is exploring other ways to make the information available to dealers, including GM's dealer communications system, its satellite network plus vehicle division branch and zone offices.

Hermiller said because the guide was published monthly, many of the prices on daily-rental vehicles and company cars sold through the auctions were out of date.

Bill would link tax to inflation

WASHINGTON — The U.S. luxury tax on cars over $30,000 would be indexed to keep pace with inflation under a tax-reduction plan worked out by House Democrats late last week.

But the Democrats dropped a proposal to increase the tariff on imported minivans and sport-utilities from the current 2.5 percent to 25 percent. The full House is expected to vote on the plan next week.

Action then moves to the Senate, which is crafting its own tax bill. The final bill that emerges from Congress could bring a veto from President Bush, who opposes the Democrats' plan to raise taxes on the rich while cutting taxes for the middle class.

The 14-month-old luxury tax puts a 10 percent surcharge on the portion of a car's selling price over $30,000. The indexing provision would prevent additional cars from being covered by the tax as inflation pushes prices higher.

Trade talks resume in D.C.

WASHINGTON — Vice Minister Noboru Hatakeyama of Japan's Ministry of International Trade and Industry will meet with U.S. business groups tomorrow to continue trade talks begun during President Bush's recent trip to Japan, U.S. Commerce Department officials say.

On the agenda are talks with the Motor Vehicle Manufacturers Association, the Auto Parts Advisory Council and the U.S.-Japan Business Council. The Business Council, which includes General Motors Chairman Robert Stempel and Ford Motor Co. Chairman Harold Poling, last week issued a resolution calling on the U.S. and Japanese governments to adopt trade policies that encourage sales of U.S. products in Japan. The Washington-based group and its Tokyo counterpart agreed that the "chronic high trade imbalance between the United States and Japan is a matter of serious and growing concern which needs to be forcefully addressed."

Steve Miller quits Chrysler

DETROIT— R.S. "Steve" Miller has resigned from Chrysler Corp. to take a job in New York.

Miller was vice chairman and chief financial officer of the auto company. Along with President Robert E. Lutz. Miller was a leading candidate to replace Lee A. Iacocca as Chrysler chairman. Iacocca has said he will retire at the end of 1992.

Miller, 50, has been with Chrysler since 1979. Before that, he was with Ford Motor Co. for 11 years in financial posts.

Volvo survives ad scam claim

A Texas jury has ruled in favor of Volvo Cars of North America in a product liability case where a couple claimed Volvo's safety-oriented advertising was misleading.

The plaintiffs, Baptist minister R.W. Johnson and his wife, Patricia, had a rollover accident Christmas Day 1987 in the Volvo 760-GLE diesel wagon they bought in 1985. Patricia Johnson suffered a compressed vertebrae, broken ribs and other injuries. The couple sued Volvo, claiming defects including sudden acceleration, faulty seat belts and a defective transmission.

The case got new life after Volvo's "monster truck" advertising episode in late 1990, where Volvo admitted one of its station wagons had been doctored to survive being run over by a giant pickup. The Johnsons amended their lawsuit and claimed the phony ad supported their case. Volvo denied it made any misrepresentations to the Johnsons.

— Jim Henry

Ford V-6 effort gets $1.2 billion

CLEVELAND — Ford Motor Co. is investing about $1.2 billion to develop and build new high-tech V-6 engines. More than $700 million of the total will be used to revamp the Cleveland Engine Plant No. 2 at Brook Park, which will produce the engines.

Robert Rewey, vice president of Ford North American Sales Operations, said the engines will be the latest in modular engine engineering and will have four valves per cylinder to improve efficiency and fuel economy.

He said the plant will have an annual capacity of up to 400,000 of the new V-6s.

Energy bill clears Senate

WASHINGTON — The Senate passed a comprehensive energy bill Thursday that includes a requirement for increased purchases of alternative-fuel vehicles by governments and private fleets in 122 of the nation's most polluted cities.

The bill did not include new auto fuel economy standards. Sen. Richard Bryan, D-Nev., who has said he will introduce separate legislation to raise corporate average fuel economy levels to 40 mpg by the end of the century, agreed that higher CAFE standards did not belong in the energy bill.

The energy bill now goes to the House.

— Max Gates

briefly

Off-the-cuff talk ends in a boot

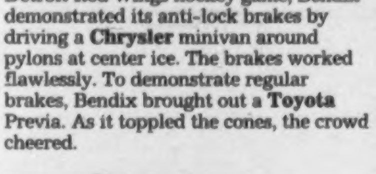
Chevrolet salesman Matt Darcy told Americans they ought to buy good value. For that, he got fired. Darcy was interviewed on "60 Minutes" while working for Gordon Chevrolet, a suburban Detroit dealership, at the Detroit auto show. He said, "If America makes a good product, I buy it. If they don't, I buy what's good for my money. I don't have to spend money because it's American." Gordon Stewart, owner of the dealership, fired Darcy over the incident last week. Said Stewart: "Darcy was saying if Americans make inferior products, then people should buy Japanese. That is extremely abusive language to a large percent of our customers, who are GM UAW workers." Stewart's store also handles Japanese-built **Geo** vehicles.

QUIET EXIT — Daihatsu America Inc. virtually will cease advertising as it prepares to leave the U.S. market within six months, according to *Advertising Age*. Kresser/Craig of Santa Monica, Calif., which handled the estimated $10 million account for the last four years, plans to reassign the account's staff to new business. The agency will be looking for another car account. "Attempting to support a national network of dealers with $10 million is ludicrous," said agency Chairman Bob Kresser of Daihatsu's spending.

HOME ICE ADVANTAGE — It wouldn't have been the same joke anywhere else. Between periods at a Detroit Red Wings hockey game, Bendix demonstrated its anti-lock brakes by driving a **Chrysler** minivan around pylons at center ice. The brakes worked flawlessly. To demonstrate regular brakes, Bendix brought out a **Toyota** Previa. As it toppled the cones, the crowd cheered.

LETTER FROM THE KING — Pontiac will produce a limited edition Grand Prix to mark Richard Petty's farewell tour on the NASCAR circuit. "Buy one of the 1,000 red, white or blue Petty cars and you'll get a personally signed letter verifying your edition number from the king (Petty) himself," said Pontiac General Manager John Middlebrook.

LEXUS LIVE — In what it believes to be the first interactive live satellite video conference between a manufacturer and its entire dealer body, **Lexus** executives recently recapped 1991 results, established 1992 objectives and answered phone-in questions from Lexus dealership employees. Questions ranged from those concerning the current political situation to queries about future sales training programs and possible product changes. All Lexus dealers are connected by satellite to the Lexus Communication System.



On the set, from left, are: Dave Illingsworth, Lexus general manager; Don Esmond, corporate sales and operations manager; and Dick Chitty, corporate service, parts and customer service manager.

PARTS

Conflicting truths cloud debate

continued from PAGE 1

that the U.S. government is trying to protect. While they are losing business with a retrenching Big 3, they are not making it up with the Japanese.

Elm International, an East Lansing, Mich., research firm, reports that 357 Japanese-owned or controlled parts plants were operating in the United States at the end of 1991. That's 89 more than in 1990. Parts from those plants count as "U.S. content" for everyone concerned — except their U.S.-based competitors.

"This political pressure for local sourcing is simply backfiring on the American parts industry," says a financial executive at one Japanese transplant automaker, who asked not to be identified. "All it does is force more Japanese parts companies to build plants in this country in order to qualify. That will create an overcapacity in the parts business, just as the automakers experienced in the assembly business."

CONFUSING DEBATE

The content rules and the "Japanese" U.S. suppliers underscore the difficulties the two sides face as they address the United States' $8.4 billion auto parts trade deficit with Japan.

And they add to the frustration already rampant in a debate where both sides are equally adamant about their claims. The U.S. says that Japanese buyers are dragging their feet. Japan's automakers raise questions about U.S. suppliers' quality. The U.S. says that the Japanese are importing a closed business system. The Japanese complain that too few U.S. firms understand the fundamentally different Japanese ways of doing business.

Underlying the debate are some seemingly conflicting facts:

Fact: President Bush returned from Tokyo last month with Japanese commitments for another $2 billion in U.S. parts purchases. That would push Japan's annual purchases of U.S. parts to $19 billion a year by 1994 — up from $10 billion in 1991 and just $2.5 billion five years ago.

Counterfact: U.S. firms are gaining on one end but losing on the other. The seemingly huge increases move in lock-step with Japanese transplant production.

Five years ago, the transplants built about 750,000 vehicles in North America. Last year they built 1.85 million. The $19 billion purchasing target assumes another 50 percent increase in transplant production.

As transplant production goes up, Big 3 sales tend to fall.

"It's not a dollar-for-dollar trade-off," charges Jack Reilly, president of Tenneco Automotive and chairman of 800-member Motor and Equipment Manufacturers Association trade group. "I might have $30 of parts in a domestic car, but only $5 in a Japanese car. Every time the domestics lose a sale to the transplants, I've lost $25 in business."

Fact: Japan's automakers are clearly bringing new business into the United States. U.S. Department of Commerce records show that in 1990, the most recent data available, the seven U.S. factories of Honda, Toyota, Nissan, Mazda and Mitsubishi purchased $7.7 billion in U.S.-made parts and materials. That's an increase of $2.6 billion from one year before.

At the same time, the group's ratio of U.S. parts-to-imports is improving. In 1989, the transplants bought $1.04 worth of U.S. parts for every $1 they imported. Last year, it was $1.54 for every $1 of imports, according to the government data.

In some cases, the figures are startling. Honda Motor Co.'s U.S. car plant in Marysville, Ohio, now spends nearly $9 on U.S. materials for every $1 in imported goods used to build Accords — not counting the value of assembly labor. That's a higher ratio than some Big 3 factories can boast.

Quips company spokesman Roger Lambert: "The Ford T-Bird isn't a hell of a lot more domestic than our car."

Counterfact: While their ratios are generally improving, the transplants' volume of imported parts hasn't declined. From 1989 to 1990, the group's imports climbed from $4.91 billion to $4.97 billion, according to the Commerce data.

Perhaps more troubling from the U.S. perspective is that the large increases in U.S. spending are being shared with Japanese competitors who have launched U.S. plants.

JOE WILSSENS/AUTOMOTIVE NEWS

Workers at Donnelly Corp. in Holland, Mich., make rear view mirrors used by Honda of America Manufacturing Inc. at its plants in Ohio.

They in turn have helped raise suspicion over Japanese "keiretsu" practices. The system refers to the common ownership and management ties among automakers and suppliers that effectively prevent outside firms from obtaining business. Honda's assembly operations in Marysville, Ohio, are served to a large degree by Honda parts plants located nearby.

Many Japanese executives say it's no different from General Motors' ownership of Delco Electronics. U.S. suppliers have complained about the closed circles, and federal agencies, including the U.S. Justice Department, have investigated them. But so far, no evidence has emerged indicating that the relationships violate U.S. fair trade law.

Fact: The transplants are now investing heavily in U.S. design and research and development facilities that will expedite local sourcing. Nissan's new $80 million r&d center in Farmington Hills, Mich., will allow a staff of some 500 engineers to help domestic suppliers create parts that are unique to the U.S. vehicles Nissan is building in Smyrna, Tenn.

The effort is paying off. Multi-Plex Inc. of Howe, Ind., has drafted new engine stampings with Nissan engineers that pulled the automaker away from its traditional Japanese supplier. The U.S.-based firm has increased its sales to Nissan from three parts in 1989 to 14 parts today, says Merle Emery, Multi-Plex president.

As Nissan and other transplants slowly evolve their products, more opportunities will open up for U.S. suppliers.

The new 1992 Toyota Camry built in Georgetown, Ky., allowed Toyota Motor Manufacturing U.S.A. Inc. to increase its U.S. suppliers from 130 to 174 last year. Research on the next-generation Accord has allowed more than 40 U.S. parts companies to meet with Honda engineers to draft their parts into the design.

Counterfact: The gains sometimes take years, and U.S. companies are already low on patience. New United Motor Manufacturing Inc., the General Motors-Toyota joint venture managed by Toyota in Fremont, Calif., was importing 61 percent of its parts and materials in 1990, six years after beginning production.

The figures underlie one issue that clouds the parts debate. While the Commerce Department figures for NUMMI sourcing count just parts and materials, the more often quoted "domestic content" figure counts more than just parts. That's the figure the EPA uses for fuel-economy purposes. So when a firm has a "domestic" content rating of 75 percent in the EPA's eyes, the number includes such costs as wages and advertising.

CHANGE IS UNDERWAY

Still, if content patterns are changing too slowly to suit American parts makers, it is still happening. Experts disagree over what will speed up the process of local sourcing for the Japanese automakers.

Daniel T. Roos, director of MIT's International Motor Vehicle Program, and co-author of the seminal *The Machine That Changed The World*, believes that "overall, the quality level among the U.S. firms still doesn't match the Japanese yet."

But he adds, "As American suppliers learn to operate in a lean production system, they will have a much higher probability of selling to the Japanese."

"Lean production," a term that Roos' group has spread throughout the auto industry, could loosely be translated to mean "Japanese production techniques." The system pivots on assembly-line control of quality issues, scant inventories, neat work environments, a small body of parts suppliers and open communications between workers, managers, engineers, designers, customers and parts makers.

Such concepts have been widely accepted by the Big 3 themselves, and many U.S. suppliers have restructured their plants to adopt similar systems. Roos believes that not enough have.

But Tenneco's Reilly disagrees with Roos, saying, "U.S. supplier quality is second to none.

"The U.S. parts industry is much more efficient than the Japanese," Reilly adds. "The Japanese know that. The U.S. is still the industry's low-cost producer." He cites a 1991 report by the Japan Productivity Center that found the average American worker was 28 percent more productive than his Japanese counterpart. AN

CAFE restrains transplants' use of U.S. parts

LINDSAY CHAPPELL
and PETER BROWN
Staff Reporters

Nissan makes small cars in Tennessee. Nissan also imports some bigger Infiniti cars from Japan.

And in order to be able to bring in those cars that consume more gasoline, Nissan feels compelled by federal law to keep the North American content of its U.S.-assembled cars below 75 percent.

While the Bush administration pressures the Japanese to buy American auto parts, federal law is actively suppressing U.S. parts purchases by transplants.

Nissan Motor Co. Ltd. and some other Japanese automakers are keeping the U.S. domestic content of their U.S.-assembled cars below 75 percent so they don't have to count the cars as "domestic" under the corporate average fuel economy law. Nissan's U.S.-assembled small cars provide high-mileage "import" cars to balance against lower-mileage cars such as the Infiniti Q45.

The American International Automobile Dealers Association also thinks the law discourages Japanese firms from raising their North American content levels. It wants the system abolished as part of a proposed free-trade pact with Mexico.

Nissan will keep its Tennessee-made Sentra subcompact at 74.6-percent domestic in order to keep it in the EPA import fleet. A compact Stanza replacement, to be built in Tennessee beginning this summer, will also stay in the low 70s for the same reason, said Earl Hesterberg, general manager of the Nissan Division.

The two cars will be sourced entirely from Nissan's complex in Smyrna, Tenn. If the EPA counted their domestic content at 75 percent or higher, Nissan would have to classify them in a different, "domestic" fleet.

That would be fine under CAFE: It would be well over the standard of 27.5 mpg that applies to "import" and "domestic" car fleets. But then the "import" fleet, which includes all Infinitis, could face problems meeting CAFE or fines for being under 27.5 mpg.

The 1993 Mazda MX-6s and 626s built in Flat Rock, Mich., are expected to be the first U.S.-built Japanese marques to be declared "domestic" for EPA purposes.

Those cars will be approximately neutral on CAFE. Says Mazda spokesman Tom MacDonald: "It is certainly going to exceed the 27.5, but it's not going to exceed it by a wide margin, which would give you a tremendous amount of banked credits."

Honda claims more than 75 percent domestic content for its Accords built in Marysville, Ohio. But since other Accords are imported from Japan, the entire line falls below 75 percent. AN

PACCAR profits off a bit in 1991

BELLEVUE, Wash. — PACCAR Inc., parent company of Kenworth Truck Co. and Peterbilt Motors Co., reported a $55.2 million profit on sales of $2.2 billion for its fiscal year 1991 ended Dec. 31. That was slightly below the $63.7 million profit on sales of $2.6 billion for a year earlier.

Charles Pigott, PACCAR chairman and chief executive officer, said lower truck sales, profit margins and environmental cleanup expenses reduced 1991 profits.

They were partially offset by the firm's cost reduction program and stronger earnings of Vilpac S.A., PACCAR's Mexican affiliate.

Bendix shutters Canadian plant

ELYRIA, Ohio — Bendix Heavy Vehicle Systems Group-Garrett Automotive plans to close its London, Ontario, machining and assembly operations by the end of 1992 to reduce excess production capacity.

It will consolidate London operations with its other original equipment and aftermarket facilities in North America. About 270 employees will be affected.

Freightliner opens Canadian plant

PORTLAND, Ore. — Freightliner Corp. has begun building trucks at the rate of one a day at its new facility in St. Thomas, Ontario, according to Dieter Zetsche, Freightliner president and chief executive officer.

Production will increase by one additional unit a day each month until the company hits its target production rate of 20 units a day.

The $30 million plant builds Freightliner's FLD 120 and FLD 112 Class 8 models for Central and Eastern Canada and the Northeastern United States.

Fruehauf shifts trailer sourcing

SOUTHFIELD, Mich. — Fruehauf Trailer Corp. is shifting production of dump and platform trailers from its Fresno, Calif., facility to plants in Omaha, Neb., and Scott County, Tenn.

The move aims to focus plants on specific products or processes.

Volvo GM boosts truck exports via distribution deals

Mexican firm gets sole import rights

JOSEPH BOHN
Truck Editor

Volvo GM Heavy Truck Corp. is increasing exports through a new distribution agreement in Mexico and a new arrangement with its Swedish-based parent covering other worldwide markets.

Trailers de Monterrey S.A. signed a contract with Volvo GM to become the sole importer of WhiteGMC trucks in Mexico.

The company manufactures heavy trucks, trailers and buses in Monterrey, Mexico, and will begin selling WhiteGMC's Integral Sleeper Aero ES through its nine-dealer network.

Laurence Oliphant, Volvo GM's chief negotiator, said Mexican Class 8 sales climbed sharply from 3,300 a year in the 1980s to 4,500 in 1990 and 8,000 in 1991. He expects 1992 sales of 9,000 to 10,000 units.

The prospect of a North American free-trade agreement, privatization of industries, tax reform and liberalized investment rules have ignited the Mexican economy, Oliphant said.

Both foreign and domestic investment have increased, inflation has slowed significantly, and tariffs have been reduced. Domestic content regulations and production controls also have fueled the country's economic take-off, Oliphant said.

Karl-Erling Trogen, president and chief executive officer, said Volvo GM exported 1,049 trucks during 1991, up from 445 the previous year. Most went to South America and the Middle East. Volvo GM sold another 994 trucks in Canada during 1991.

Volvo GM also expects to increase export sales as a result of making its parent company, Volvo Truck Corp. of Gothenburg, Sweden, the sales representative for U.S.-made trucks.

Volvo Truck is taking up the marketing of Volvo GM trucks through its worldwide network of importers and dealers, Trogen said.

He said Volvo Truck has a lot of expertise, since it exports over 90 percent of the trucks it produces. The WhiteGMC Autocar, which has been a big seller in the Middle East, will continue to be shipped there.

The company also is gearing up to export the WhiteGMC WG. Export versions of this truck will be equipped with Volvo drivetrains and carry the Volvo NE name because Volvo is better known than WhiteGMC.

Volvo AB of Sweden sold 54,130 trucks worldwide in calendar 1991, 4 percent fewer than a year earlier. The company is still the world's second-largest heavy-truck manufacturer, behind Germany's Daimler-Benz AG.

Subtracting the 15,461 trucks sold in the United States and Canada and exported from the United States, Volvo Truck marketed 38,689 trucks in Europe, South America, Australia and the Middle East in 1991, Trogen said.

The Middle East, East European and German markets were especially strong, while the British and Scandinavian markets were weaker than in 1990.

Volvo GM Heavy Truck has been beefing up its U.S. operations, Trogen added.

In 1991, it launched a program to help dealers add 100 new salespersons. About one-third are already on board, and the company is helping to recruit the rest.

Volvo GM is helping subsidize these salespersons during their training. Many will concentrate on small- and medium-sized fleets and owner-operator truck buyers. These are segments where the company has significantly increased its marketing efforts, Trogen said.

The company also launched new programs to beef up service and parts support. So far, Trogen said, 65 "super dealers" have committed to carrying a comprehensive inventory of spare Volvo components to supply customers and other dealers "without delay."

Order intake shows upturn in Class 8

JOSEPH BOHN
Truck Editor

Class 8 truck sales dropped by 21.3 percent in January from a year ago, though the net new-vehicle order intake indicates a sharp upturn underway.

Class 8 sales of 6,738 in January were down from 8,563 a year earlier, according to the Motor Vehicle Manufacturers Association.

But the net Class 8 truck order intake increased to 10,550, up 8.9 percent from December's 9,692 and 44.2 percent ahead of January 1991's 7,378, according to Rothschild Inc. of New York.

Net orders reflect the total number that remain after new orders have been added and cancellations been deducted.

Frank Prezelski, an analyst with Rothschild, said the order intake, which reflects trucks that will be built for sale in March and April, was "better than our expectation."

He added that January's retail sales decline is "probably the worst" of 1992, and that sales will increase throughout the year.

The medium-duty market, led by Classes 6 and 7, staged a strong sales upturn during January.

Class 4-7 sales totaling 9,953 were up sharply from 8,589 a year ago.

Class 4 sales had the only serious falloff, dropping to 1,272 from 1,744 a year ago.

Navistar beefs up 9000 series

Navistar International Corp. plans to introduce this new 9200 premium conventional tractor in the fall. It will feature a 112-inch bumper-to-back-of-cab dimension, a set back axle design and a choice of 10.0-liter diesel engine offerings. Navistar's Chatham, Ontario, plant will produce the vehicle.

European sales rise 1% despite dip in Germany

Smaller markets show healthy gains

DIANA T. KURYLKO
Staff Reporter

FRANKFURT — New-car sales in Europe rose only 1.08 percent last month, to 1.29 million, as the major markets continued to show signs of economic weakness.

Of the four markets that account for 70 percent of all European sales. only Italy began the year with a gain, rising 1.14 percent from the same month in 1991.

As expected, sales in Germany slid 3.8 percent from a strong January a year earlier, continuing a weakening that began in the second half. France was virtually unchanged, and sales in the United Kingdom fell 6 percent.

Many of the smaller markets showed strong gains, however. Spain posted a 26.6 percent increase, while the Netherlands, Belgium-Luxembourg, Denmark, Norway and Sweden all notched healthy improvements.

The only surprise in the performance of Europe's top marques was Fiat Auto S.p.A., which slipped to fourth place from second on a 19.6 percent decline in volume, to 154,900 units.

Fiat attributed the lackluster month to mixed signs in the political arena, where government tax incentives for the purchase of cars with catalytic converters appear imminent. Such incentives have been the subject of debate for months.

Buyers also are waiting for two new models, the small Fiat Cinquecento and the Alfa Romeo 155. Both were introduced recently and are slowly appearing in Fiat and Alfa showrooms.

Volkswagen Group continued to dominate the 17-nation market with a 16.1 percent share and a 6.1 percent improvement in sales, to 207,700 units. VW even had an 8.7 percent gain in Germany, where its share was 30 percent. Nearly every other maker, except Ford, showed a decline in Germany, ranging from 13.3 percent for General Motors Europe to 22 percent for Mercedes-Benz AG.

France's Peugeot Group advanced to second place in Europe on a volume of 161,700 units.

Ford sales were up 2.3 percent despite problems in Great Britain, where it has a 25.4 percent share. And the company continued to make inroads in Italy, where sales were up 29.5 percent.

General Motors was down 0.8 percent, but managed to retain a market share of 11.9 percent. GM is still pushing to get production of the new Astra into full swing.

Among the luxury marques, Mercedes-Benz began showing signs of the dip that management had predicted this month in announcing a production slowdown.

Mercedes sales dipped 16.2 percent from 1991. Rover Group, Jaguar, Mazda and Mitsubishi were the only makers with larger declines in January. ■

Ford of Britain experiments with group pricing for cars

MAURICE GLOVER
Special Correspondent

LONDON — In an innovative bid to spur sales by trying to ease buyers' showroom confusion, Ford of Britain said last week it will drop individual prices on several models and group them into price bands.

Under the six-month trial program, Ford said all cars in a band will cost the same — irrespective of engine size, styling configuration or level of equipment. The experiment kicks off with the Sierra and Granada ranges, but will be expanded to the entire product lineup if it is successful, Ford said.

In the Sierra range, 61 models — hatchbacks, wagons and sedans — have been grouped into just 13 price bands from the equivalent of about $19,240 to $33,160.

The biggest group puts eight hatchbacks, sedans and wagons into the showrooms at $23,835. They offer a choice of 1.6-, 1.8- or 2.0-liter engines, and two trim levels.

For example, a buyer could choose between a Sierra sedan in GLX trim with a 1.6-liter engine, a wagon in LX trim with a 1.8-liter motor, or a 2.0-liter LX hatchback.

Further upscale, 20 luxury-segment Granada and Scorpio models have been divided into five groups priced from about $34,600 to $39,600. Midway in this range, seven plush executive sedans, hatchbacks and wagons are grouped around the equivalent of $37,415.

At this level, buyers get to choose between a 2.9-liter, six-cylinder engine or a 2.0-liter four, and can have automatic transmission or air conditioning.

The move is the brainchild of Ian McAllister, the new chairman of Ford of Britain, who aims to widen his company's sales lead over Vauxhall, the General Motors subsidiary.

"This is an idea that emerged both from research we've carried out among customers and discussions which have been held with our dealers," he said in an interview. "We found that both sides felt our price structure was hard to understand because we offer so many different body, powertrain and equipment combinations."

In all, Ford produces 64 variations on its Sierra theme, compared with 29 hatchbacks and sedans in the rival Vauxhall Cavalier stable.

"A lot of our customers walk into showrooms to see what they can get for a particular sum of money. Now we can point them to a group of cars," says McAllister.

Ford says its price-banding arrangement will still allow buyers to negotiate for discounts from the list prices. ■

NADA revs up certification

Sales, CSI classes kick off in April

CHARLES M. THOMAS
Staff Reporter

DALLAS — The National Automobile Dealers Association's long-awaited sales certification program gets under way in four states in April to train salespersons in techniques to improve customer satisfaction.

The program will be offered initially in Cleveland; Buffalo, N.Y.; Salt Lake City; and Casper, Wyo.

"This program teaches a consultative approach to car sales," said Robert W. Nagel, NADA's Wyoming director and chairman of the subcommittee that developed the curriculum.

The program, which cost NADA $1 million and took three years to develop, is designed to improve salespersons' professionalism and self-esteem.

It also may help raise their wages. According to NADA, the average salary for salespersons is $22,000 annually. But dealers say that is low and their salespersons earn $25,000 to $40,000 annually.

The program also could help dealers retain salespersons who have a tendency to follow popular products from one dealership to another. The average dealership has an annual turnover rate of more than 50 percent for salespersons, according to NADA estimates.

The program is open to salespersons, sales managers and dealers. The curriculum includes courses in ethical and legal practices, selling techniques and consumer psychology. It combines home study with training seminars.

Not only can salespersons be certified, they can be decertified under the program. The process starts when a consumer files a complaint with NADA against a salesperson. A panel consisting of a salesperson's peers and others conduct an inquiry and can issue reprimands.

Three reprimands result in decertification, but not necessarily loss of job.

Nor is the program a quick fix for everything that ails the auto industry, though NADA officials concede that buying a car can be a nightmarish experience for consumers.

"Certification is an important investment in the future," said Nagel.

Salespersons can pay the $450 fee themselves, but NADA hopes dealers will underwrite some or all of the costs for their employees.

NADA officials estimate that 200,000 salespersons, dealers and sales managers eligible to take the courses.

Despite the economy, they expect to graduate 4,000 salespersons this year and about 5,000 a year thereafter.

Scrappage suggests car demand

JOSEPH BOHN
Staff Reporter

Recession-wary car owners aren't scrapping their old vehicles as readily as in prior years.

But they're still scrapping them fast enough to increase the pent-up demand that has been building for new vehicles.

Scrapped vehicles help create demand for new-car and truck sales, according to R.L. Polk & Co. of Detroit .

"If you're scrapping a car, it's eventually going to be replaced," said Don Mueller, Polk product manager of replacement market services.

But replacement of older or worn-out vehicles is only one component of the new-vehicle market, he added.

The other important factor is the overall growth of the vehicle marketplace.

"Our statistics bear out that in difficult economic times, the number of scrapped units represent a higher percentage of the overall number of new vehicles being sold than in a stronger economy," Mueller said.

In a forthcoming report, Polk will report that 10.9 million vehicles were scrapped during the 12 months ended July 1, 1991.

That is down only slightly from 11.1 million in the comparable period that ended in 1990 and 11.2 million for the period in 1989, according to Polk figures.

Polk is a major supplier of information relating to first-time-titled new-vehicle registrations and the total registered vehicle population.

Given the sharp falloff in the economy last year, George Hanley, Chevrolet manager of marketing information and research, said he had expected an even sharper decline.

SCRAPPAGE RATES

Scrappage rates are based on non-renewed registrations, for years ending June 30.

	1986	1987	1988	1989	1990	1991
Percent of cars scrapped	7.4	6.9	7.3	7.4	7.2	—
Percent of trucks scrapped	5.5	5.3	4.8	4.4	4.1	—
Percent of total vehicles scrapped	6.6	6.3	6.4	6.3	6.2	—
Millions of units scrapped	10.8	10.5	11.0	11.2	11.1	10.9
Trucks as percent of fleet	27.7	28.3	29.9	30.2	31.2	32.0

Source: R.L. Polk

The fact that the rate remained relatively high means people are still turning over their fleets, Hanley added.

Polk reports scrappage rates once a year for the 12-month period ending July 1.

It determines scrappage by comparing the current number of vehicles in operation with a year earlier and subtracting from the current number the new vehicles registered during the most recent 12-month period.

The figures aren't 100 percent accurate, since an unregistered vehicle may not have been consigned to the scrap heap.

That is particularly true of heavy trucks, which may not be required during slow economic periods.

Polk's Mueller said many consulting firms and forecasters use the numbers in their work.

They look at why scrappage rates went up or down in a given period and what specific market segments are causing the changes.

Backing up the broad numbers is Polk's count by make, model and engine of every vehicle on the road. Auto companies use that data in making longevity claims for their vehicles.

It is also used by the aftermarket to determine the potential replacement of specific vehicle components and parts.

Not all vehicle manufacturers are interested in scrappage data, though.

"I don't do anything with it," said Joel Pitcoff, manager of research and analysis for Ford Motor Co.

"The scrappage rates are not available until six months later. I don't know how you could use it in forecasting."

Pitcoff said Ford's chief economist doesn't use the data either.

One major continuing trend in Polk's data is that trucks make up a larger percentage of the total number of vehicles on the road.

They accounted for 32.0 percent of all vehicles in operation in 1991, compared to 27.7 percent in 1986, according to Polk data.

Meanwhile, the scrappage rate for trucks dropped steadily. In 1987, some 5.3 percent of the trucks on the road were scrapped, compared to only 4.1 percent in 1990.

That reflects improvements in durability and changes in use, said Chevrolet's Hanley.

Ten years ago, trucks were used primarily for work and utilitarian purposes.

Today, they often serve as household vehicles.

Hanley added that new-truck sales have grown more than car sales.

Dealer indicted for role in parts-theft scheme

HOUSTON — A car dealer and 10 former police garage employees are among more than a dozen people indicted for theft in connection with at least $250,000 in phony invoices and auto parts orders.

Bob Archer, president of Archer Chrysler-Plymouth-Jeep-Eagle Inc.; Aubrey Vincent, a former employee at the Archer dealership; and Salim Mann. 37, a service station owner, have been accused of being involved in theft schemes with the civilian police garage employees for more than five years.

City spokeswoman Maryann Young said that according to investigators, employees at the Houston Police Department's fleet maintenance division, with Archer's assistance, stole money from the city by taking parts and making payments on invoices for parts that never were delivered.

Since July 1989, the city has paid Archer $230,732 for auto parts.

911 Turbo	$14,000

SUBARU (1991, expires March 3)

Legacy	$1,200-1,700

SUZUKI (expires April 2)

Swift (1992)	$400-700
Sidekick (1992)	$300-700
Swift (1991)	$700-1,000
Sidekick (1991)	$1,000-1,500

TOYOTA (expires April 2; 1991-92 models unless otherwise noted)

Corolla (1992)	$600-1,000, quota
Celica	$400-800, quota
Tercel	$200-600, quota
Pickups (base 4x2)	$900-1,500, quota
Other pickups	$400-1,000, quota

VOLKSWAGEN (no expiration date)

Passat (1991)	$1,500
Jetta, Fox, Golf (1991)	$500
All 1990 cars	$500-1,500

VOLVO (expires March 31)

1992 models	
240 series	$500-1,000
740 series	$1,000-1,500
940 series	$1,500
1991 models	
240 series	$1,500
740 series	$1,750-2,500
940 series	$1,500-2,500
780 coupe	$2,500

Factory rebate programs get a pre-spring tuneup

ARLENA SAWYERS
Staff Reporter

Many companies have fine-tuned their incentive programs.

GMC Truck announced a revision of its agenda until March 31. New consumer rebates are: 1991 Safari, $400; 1992 Safari, $500; and 1991 and 1992 Vanduras with upfitter package, $1,000.

Chevrolet is paying dealers $1,000 to $2,000 on Corvettes. The expiration dates are May 4 on 1991s, June 4 on 1992s.

In a separate military promotion, General Motors is offering $400 rebates to all active U.S.-based military personnel and their spouses who buy or lease eligible GM cars and light trucks through Sept. 30. The rebate is in addition to other consumer rebates excluding GM's college graduate, first-time buyer or overseas vehicle purchase plans.

Mazda Motor of America Inc. is offering $1,000 consumer rebates and choice of free air conditioning or free automatic transmission on its 1992 Protege, MX-6 and 626 models. Consumer rebates on 1992 pickups range from $400 to $1,200.

Also, Mazda is paying dealers $2,000 on the 1991 RX-7 and $400 to $600 on the 1992 MPV. Mazda's programs expire April 6.

Until March 3, **American Honda Motor Co. Inc.** is paying dealers $500 on 1991 Accords.

Nissan Motor Corp. in U.S.A. is paying the following dealer rebates, based on performance against quotas: 1992 Stanza, $1,000 to $1,600; 1992 Sentra, $300 to $500; and 1992 Maxima GXE, $800 to $1,000. The program expires March 3.

Mitsubishi Motor Sales of America Inc. is offering dealer rebates of up to $1,500 on 1990-92 Galants, Mirages and pickups, based on region.

Nationally, the company is paying dealers up to $1,750 on the 1992 Eclipse. Eclipse buyers are eligible for financing of 5.9 to 8.9 percent, depending on down payment.

Mitsubishi is paying consumer rebates of $500 on the 1990-1992 Mirage and $1,000 on 1991-92 pickups in its Southwest region.

The latest incentive offering from **Hyundai Motor America** includes consumer rebates of $500 to $1,000 on 1992 cars and $750 to $1,500 on 1991s until April 2.

Dealers in **American Isuzu Motors Inc.'s** Southwest and Southeast regions will receive a $500 rebate on every 1990-92 two-wheel-drive Rodeo they retail through March 31.

Through March 31, **Ford Motor Co.** is offering a $1,000 "Owner Loyalty" incentive on Ford Crown Victoria, Mercury Grand Marquis and all Lincolns. The buyers collect if they already own a Ford Motor Co. vehicle made by that division. ■

DAIHATSU

Poor U.S. sales, possible quota cut

continued from PAGE 4

down 36.6 percent. Combined Charade-Rocky sales fell 40.2 percent.

But the cycle was self perpetuating, analysts point out. Because its allocation was so small, Daihatsu was blocked from reaching the critical mass necessary to build a national marketing presence in the United States — which prevented it from selling more vehicles.

Indeed, Daihatsu executives discovered to their horror in a recent survey, the company's name was so little known in the United States that many consumers thought it was Korean.

"It is a classic Catch-22 situation," said analyst Neal Doying of Baring Securities (Japan) Ltd.

"Daihatsu has been saying for a long time, 'Give us more export allotment so we can sell more cars.' But they weren't able to advertise more because of the limited budget and so forth. So the key to them selling more cars was to have a bigger allotment."

In the assessment of Doying and others, Daihatsu gave up because they realized they would never get a larger allocation or approval to build a U.S. plant.

"And the reason they realized that is because the (ceiling) is coming down," Doying said. "I think the government is already going around and negotiating (allocations)," he said.

It is an article of faith here that a cut in the U.S. passenger-car export ceiling, to as low as 1.6 million or 1.7 million units for the fiscal year beginning April 1, will be announced soon.

At best, Daihatsu's tiny allocation would have been left untouched. But more likely, it would have been cut further, since it has sold far less than its allotment in recent years.

Daihatsu has long sought to convince MITI to give it a larger allocation. With no transplant in the United States, its only recourse was to plead for a bigger slice of the export pie.

Daihatsu's senior managing director in charge of overseas sales, Toshio Yoshioko, said in an interview late last year that Daihatsu needed an assembly plant in North America to mount a significant effort. But he also restated at the time his company's commitment to the American market.

1992 Daihatsu Charade

"We learn a lot of things by being there . . . we have a lot of confidence in our products," Yoshioko said in December.

Daihatsu will remain in the commercial-vehicle market in the United States, for which there is no export limit.

MITI for years delayed Daihatsu's entry into the U.S. market by withholding an allocation of units under the voluntary agreement. But ministry officials last week denied that they were involved in the company's decision to withdraw.

"We didn't say anything — it was all Daihatsu's decision," said a MITI spokesman.

Meanwhile, the withdrawal — and its politically correct timing — may have served a broader purpose, some suggest.

With trade friction at a fever pitch since the Big 3 chairmen visited Japan with President Bush last month, it is generally conceded here that Daihatsu's decision to quit the United States came at an appropriate time.

Industry observers here agree that the specter of a Japanese company in retreat — even one with a relatively limited commitment in North America — couldn't hurt politically.

Daihatsu's pullout also is in line with an emerging Japanese industry-wide strategy in the United States that hinges on a lower voluntary export ceiling, limited unit growth and higher prices.

"The Japanese are now changing their strategy in the United States," said Koichi Shimokawa, a business professor and auto industry specialist at Hosei University. "They are strengthening transplant production volume and capacity."

Analyst Ben Moyer of Merrill Lynch's Tokyo office agreed that the decision was probably part of a bigger picture.

"I understand the point," Moyer said. "Maybe Daihatsu is a sacrifice, but we'll never know."

Whatever the case, Moyer said, the decision to quit the U.S. market was probably for the best.

"I don't think they have any product, even in the design stages that they could expect to sell in large volumes in the U.S.," he said.

"And without another product it would be hard for them to support a distribution network." ■

INCENTIVE WATCH — CUSTOMER INCENTIVES

NEW PROGRAMS

GMC TRUCK (expires March 31)

G van (1991-92)	$500-1,000
Safari (1991)	$400

GM holds advertising to '91 level

CRAIN NEWS SERVICE

General Motors is holding the line on 1992 ad budgets, with total spending expected to be flat or slightly down compared to the estimated $1.2 billion spent in 1991.

Advertising Age, a sister publication to *Automotive News,* reports that insiders, including several at GM and its agencies, said ad spending plans are still subject to changes, but working budgets reflect GM's concerns about costs.

The decisions weren't unexpected in light of the company's plans to scale down.

While there are no massive cuts in spending, ad executives are disappointed the company isn't capitalizing on a chance to rebuild market share in light of a slew of new products and the current "Buy American" sentiment that has made some consumers more receptive to domestic nameplates.

Because GM executives put a premium on new-product launches, some of the divisions fared better than others in the budget process.

Indications are that Pontiac, Buick and possibly Oldsmobile will spend at approximately the same levels as 1991 in order to carry through key product launches, with other divisions taking spending cuts.

While GM cuts back, domestic rivals Ford Motor Co. and Chrysler Corp. are sticking to their plans to increase spending on advertising.

Chrysler ad spending is expected to increase nearly 20 percent from the estimated $550 million spent in 1991. The increase is being driven largely by the launch of the Jeep Grand Cherokee and this fall's debut of the mid-sized LH models.

Ford's overall spending increase this year is pegged at 15 percent over the estimated 1991 total of $600 million, largely reflecting a belief by some top executives that the company has been underspending, given the increased competition. ■

**Estimates for Mack, Volvo-White, Kenworth, Peterbilt, Freightliner, Mercedes-Benz.

May contain error of one or two units due to rounding.

Output is highest of 1992

ANNE E. WRIGHT

Chief Statistician

Last week's estimated car and truck production in the United States and Canada was the highest of 1992. Total output was 239,744, an increase of 8.1 percent over the previous week and 14.3 percent over the year-ago week.

U.S. car production was estimated at 116,956 last week, up 9.7 percent from the prior week but down 2.4 percent from the year-ago week.

In Canada, last week's estimated car production was 23,429, topping the prior week by 16.6 percent and the year-ago week by 68.8 percent.

Last week's estimated U.S. truck production was 76,633, up 6.4 percent from the prior week and 13.4 percent over the same week in 1991.

In Canada, truck production was estimated at 22,726, down 1.3 percent from the prior week but up 167.6 percent over last year.

U.S. and Canadian car production continues to trail 1991. So far this year, 871,607 cars have been assembled, down 4.4 percent from the 1991 period.

Truck production in the United States and Canada is 652,023 this year, up 30.2 percent from 1991.

The daily build rate for cars and trucks in the United States and Canada was 47,949 last week, 8.1 percent above the prior week and 14.3 percent above last year.

General Motors last week reduced production at the Buick City plant in Flint, Mich., due to slow sales of the Buick LeSabre and Oldsmobile Eighty Eight. Production at the plant will be cut by approximately 10.8 percent. The plant was producing 65 cars per hour and is now producing 58 cars per hour.

The reduced rate will continue for at least three weeks and may be extended if demand for LeSabres and Eighty Eights does not increase.

Ford of Canada began producing the new 1992 Crown Victoria police vehicle last Friday at the St. Thomas, Ontario, facility.

Ford has received orders for more than 22,000 of the new police vehicles, which will be produced through the first half of the year. About 19,000 units were ordered by police departments in the United States, and 3,000 units are slated for Canadian police and government customers.

So far this year, production of the Crown Victoria is down 22.8 percent from 1991.

The addition of the police vehicles at the St. Thomas plant is not expected to require overtime.

Last week GM scheduled overtime at four truck facilities: Moraine, Ohio; Janesville, Wis.; Scarborough, Ontario; and Oshawa, Ontario.

Ford ran daily overtime last week at the Louisville, Ky., and Kansas City, Mo., truck plants.

Chrysler slated Saturday overtime at the St. Louis (No. 2) facility last week and scheduled three seven-hour shifts each day this week. ■

late news

GM and Poland sign FSO accord

FRANKFURT — General Motors Europe said late last week it has signed a memorandum of understanding with the Polish government to assemble Opel passenger cars in Poland with the state-owned automaker, FSO.

Pending a final agreement, GM said it will invest up to $75 million in facilities and equipment in Fabryka Samochow Osobowych. The value of FSO has not been completely appraised, but sources close to the company believe GM will control 80 percent of the venture.

Under the terms of the agreement, GM also will form a joint study team with FSO to develop recommendations for a replacement model for the Fiat 125-based Polonez, the vehicle currently produced by the factory.

GM also will help FSO upgrade its current product and manufacturing.

— Diana T. Kurylko

U.S., Canada try to avoid dispute

WASHINGTON — U.S. trade and customs officials met with Canadian embassy representatives here last Friday in an attempt to head off a formal diplomatic dispute over domestic content for automobiles shipped between the two nations.

Lutz still faces obstacles

Miller's exit may preserve Iacocca's clout at Chrysler

MARY CONNELLY
Staff Reporter

When Chrysler Corp. Chairman Lee Iacocca steps down as chief executive officer on Dec. 31, he is likely to retain a stronger presence and authority than planned because of last week's sudden departure of vice chairman Robert S. Miller Jr.

Chrysler had long anticipated that if Iacocca was succeeded from within the company, two executives would form the succession team — Miller and Chrysler President Robert Lutz.

The two were viewed as a balanced team with Miller contributing the financial strength and Lutz providing the product acumen.

But Miller's abrupt departure to become an investment banker in New York City 10 months before Iacocca's planned retirement now removes the balance from the internal ticket. Rather than ensuring that the 60-year-old Lutz alone will inherit the chairmanship, some observers familiar with the situation suggest Miller's leaving may actually make it more difficult for Lutz to succeed Iacocca.

Board members now must weigh any drawbacks to Lutz flying solo against the certain corporate upheaval if he is not named chairman.

Ironically, one of Lutz's chief contenders for the chairmanship may be former Chrysler vice chairman and Iacocca heir apparent Gerald Greenwald. The board search committee is said to be considering Greenwald as a candidate for the chairmanship and has had several discussions with him, according to those familiar with the situation.

Greenwald removed himself as a contender for the job when he abruptly resigned in 1990 to lead an unsuccessful employee buyout of UAL Corp., the parent company of United Airlines. His action angered and embittered Iacocca but within the last year the two men have reconciled.

Greenwald, like Miller, built his reputation on the financial side of the business. He is now a managing director of the New York investment banking firm Dillon, Read & Co.

Lutz: Now the only in-house candidate.

Greenwald's abrupt departure, like Miller's, created havoc in the succession scenario at Chrysler, leading Iacocca and the board to reach the current contract that keeps the chairman at the job through Dec. 31, 1992.

The 67-year-old Iacocca reached the traditional retirement age of 65 in October 1989.

The board's options in finding a successor to Iacocca apparently are narrowing.

Unless the board turns to Lutz or Greenwald,

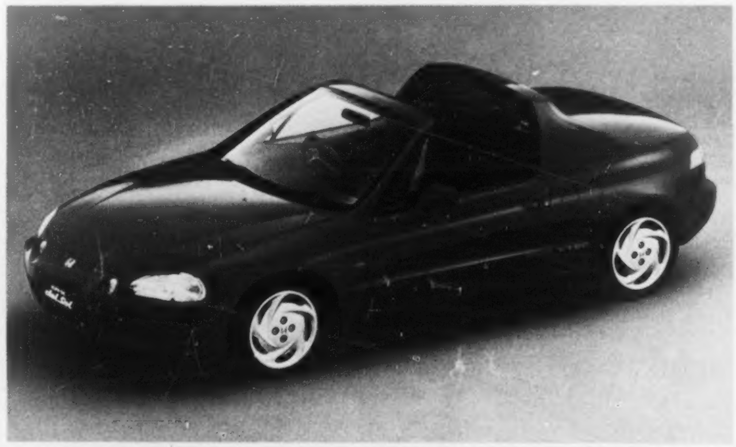
Honda's new CR-X bows at Geneva



Honda will roll out its CRX replacement, the CR-X del Sol coupe, at the Geneva auto show this week. But the version with an electrically powered sliding roof won't be seen in European or U.S. showrooms for some time — if at all. Stories on the car and the show are on Pages 6 and 8.

Politics play role in Japan price hikes

JOHN K. TEAHEN JR.
and JIM HENRY
Automotive News

Richard Recchia, executive vice president of Mitsubishi Motor Sales of America Inc., is the only leader of a Japanese auto importer who acknowledges publicly that politics are playing a part in the current round of price increases.

"If Mitsubishi raises prices, it will be a combination of everything, politics included," Recchia told the International Motor Press Association in New York last week. "It would be naive to think that politics didn't have some part in it."

Mitsubishi hasn't jumped on the price-hike bandwagon yet, but the

GM reorganization hacks at bureaucracy

Stempel also names 12 doomed plants

PHIL FRAME
Staff Reporter

General Motors will construct a new corporate hierarchy over the next year aimed at holding executives more accountable for their decisions and sharpening the company's focus on vehicles.

Those are the primary goals of Chairman Robert Stempel's vision of a new GM, stripped of its lumbering bureaucracy so it can make money in North America.

GM had a $5.3 billion operating loss in the United States last year, while making significant profits almost everywhere else in the world where it operates.

Stempel announced the vision last week. But for now, the reorganization remains an abstraction. The structure will be determined by a new North American Operations Strategy Board over the next year.

The board consists of GM's top automotive executives and is chaired by President Lloyd Reuss, who gains power in the reorganization. (See Page 34.)

Reuss said GM is not specifically trying to cut layers of management with the reorganization, although that could happen. He said many of GM's management layers have been shed in recent years.

The reorganization goals were announced last week by Stempel during a news conference where the company's $4.5 billion 1991 net loss was disclosed. Stempel also named 12 of the 21 plants that he said on Dec. 18 would shut down over the next three years.

Stempel said the prime objectives of the future GM structure are:

Aluminum spaceframe scores at SAE

AL FLEMING
Industry Editor

DETROIT — Automotive engineers and designers are accelerating weight-reduction efforts for the industry's next generation of cars and light trucks.

That message came through loud and clear at last week's SAE International Congress and Exposition in Detroit.

Technical seminars and press conferences exploded with talk of weight-cutting materials that will help cars meet tough fuel economy and emissions goals without sacrificing performance, interior space or safety.

While plastic, magnesium and new lightweight steel got their share of attention, behind-the-scenes talks with Big 3 and supplier sources indicate aluminum is playing a growing role in new-vehicle programs.

The hottest buzzword is "aluminum spaceframe," a major departure from the tradi-

Alfa 164 replacement

Caught hiding in traffic, this running prototype of the Alfa Romeo 166 carries similar styling to the 164, the car it will replace in September. The top-of-the line 166 will have all-wheel drive and will be powered by a 24-valve V-6 engine that turns out 230 horsepower.

Customs, in a ruling still to be made official, has concluded that engines made by Honda in Ohio and shipped to Alliston, Ontario, for assembly into Civics are less than 50 percent North American content. Without the value of the engine, the Civics are considered imports subject to a 2.5 percent U.S. duty. Honda could owe $16.5 million in past duties.

Last Thursday, Canada's treasury department ruled that the engines do meet the 50 percent content requirement and can be shipped into Canada duty-free.

Canadian officials have indicated they will file a formal dispute if informal talks are not successful, said embassy spokesman Malcolm McKechnie. *— Max Gates*

GM to train Quebec workers

STE. THERESE, Quebec — Laid-off workers at the General Motors plant here got a vote of confidence in their future last week.

In the same week that General Motors announced deep cuts elsewhere in its North American operations, GM of Canada inaugurated a new center that will train laid-off Ste. Therese workers to build the new F-body cars, the Chevrolet Camaro and Pontiac Firebird.

The training center occupies 28 rooms of a nearby hotel. It will provide more than 294,000 worker-hours of training at a cost of more than $8.5 million by Dec. 15.

About 3,400 workers were laid off when production of the Oldsmobile Cutlass Ciera ended at Ste. Therese last July. Preparation for production of the new F-body cars begins next fall.

Hyundai slates part-time work

BROMONT, Quebec — Hyundai workers will return to the Sonata plant here March 16 for two weeks of normal production, then will begin up to six months of three-day weeks.

The plant was closed Feb. 10 after a month-long strike at the parent company in Korea led to a shortage of parts.

A spokesman for Hyundai Auto Canada said the company does not expect the slowdown to last longer than six months.

Big Pontiac job goes to Myers

PONTIAC, Mich. — Lynn Myers has been appointed general marketing manager for Pontiac. That is the highest post held by a woman in any General Motors car or truck division.

Myers: rises at GM

For Myers, 48, the new job is a return to brand marketing. She was with Oldsmobile in advertising and marketing from 1973 to 1988. She was named marketing director there in 1982 and director of planning in 1985.

She moved to the corporate marketing and product planning staff in 1988 and has been general director of North American marketing and product planning for GM since 1989.

At Pontiac, Myers will be responsible for strategic planning, marketing and advertising activities. She succeeds Joseph Hendrix, who recently was appointed assistant general sales and service manager for the Central United States.

Curry impasse may end soon

WASHINGTON — The confirmation of long-time Bush supporter Andrew Card, 44, as the new Secretary of Transportation gives new life to the career of the administrator of the National Highway Traffic Safety Administration, Jerry Curry.

One of Card's first tasks will be to resolve the impasse over who will head NHTSA and a second key agency, the Federal Aviation Administration.

Curry was nominated last fall to head the Federal Aviation Administration, replacing James Busey who moved up to the No. 2 spot at the department.

After Samuel Skinner left the Department of Transportation to become President Bush's chief of staff, Curry got into a scrape with Busey, who was then acting secretary of the department. In late January, Busey asked Curry to resign. Curry refused. Now Busey is back to being No. 2, and an industry source suggested that Card wants Curry in the Federal Aviation Administration post.

Brazil speeds cut in tariffs

SAO PAULO, Brazil — The Brazilian government said last week it will bring forward - two scheduled tariff reductions on imported automobiles in retaliation for continuing price increases by domestic carmakers.

The government said a reduction in the tariff to 40 percent of a car's assessed price from 50 percent, originally scheduled for Jan. 1, 1993, will now take effect Oct. 1. A second reduction to 35 percent, scheduled for Jan. 1, 1994, will move forward to July 1, 1993.

Brazilian carmakers, including affiliates of Volkswagen AG, Ford Motor Co. and General Motors, have steadily raised prices since government price controls were lifted last September. Inflation is currently about 25 percent a month.

'Jolly John' has new store

SACO, Maine — Jolly John Pulsifer, the flamboyant Ford and Lincoln-Mercury dealer whose overexpansion forced him into bankruptcy last year, is returning to the market.

His new Saco dealership is called Jolly John Auto City.

Pulsifer, 55, last year declared about $9.5 million in debt compared to about $1.5 million in assets when he filed a Chapter 7 liquidation proceeding.

Pulsifer struck a deal with longtime Portland, Maine, Lincoln-Mercury dealer Norman Greenberg to buy the Saco Dodge-Jeep-Eagle store owned by Raymond Crepeau.

Crepeau will continue to operate his Crepeau Motors Inc. Chrysler-Plymouth dealership in Kennebunk.

Greenberg is providing Pulsifer with financing. Pulsifer is the dealer principal and chief operating officer.

briefly

Used-car license not heaven sent

The Sisters of St. Joseph in Holyoke, Mass., have applied for a used-car dealer's license so the order can attend auto auctions and buy used cars. But auto dealers shouldn't worry. The Associated Press reports that over the years, the nuns in the teaching order have moved out of the convent and into the community to be closer to their work so they need cars. The 500-member order maintains a fleet of 100 cars at their Mont Marie Motherhouse. Though the nuns buy mostly new cars, they want to have the option of buying used cars.

SCHOOL PROJECT — Thirty colleges in the United States and Canada have been selected by **Ford Motor Co.** to build a hybrid electric vehicle over the next 15 months. Twelve of the schools will receive a $10,000 grant from Ford to build the vehicle from the ground up; the rest will receive an Escort station wagon to convert. Kelly Brown, an executive engineer at Ford, says it will cost a minimum of $30,000 to complete the project, and it's possible that one of the vehicles could become a Ford production car. One of the college teams "could be in business," he said.

ONCE BITTEN, TWICE SHY — Chrysler Corp. Chairman Lee Iacocca's recent speech lambasting the Japanese automakers at the Economic Club of Detroit would be a hard act for anybody to follow. Masahiro Uchida, president of **Mazda Motor Manufacturing (USA) Corp.,** was up for the challenge, although he compared the experience to walking into a lion's den. "Frankly, with all the current controversy, I had second thoughts about coming," he said last week to a packed auditorium. But his soft-spoken manner and warm sense of humor won him a warm reception.

MORE BASHING — An irate man, apparently intent on Japan-bashing, yelled at and "charged" like a grizzly bear at a woman showing off cars on the **Subaru of America Inc.** stand last week at the Greater Cleveland Auto Show, said Chris Wackman, Subaru vice president of marketing. This was shortly after **General Motors** closed a plant nearby, Wackman said.

MESSAGE FROM SATURN — Last week's column described a **Lexus** live satellite video conference with its dealers. Lexus believed it was the first such "meeting" between a manufacturer and its entire dealer body. That prompted a priority-one message from **Saturn** headquarters, which wants you to know that it has conducted several such satellite tete-a-tetes with its dealers since November 1990.

Recchia: home not so sweet

YOU CAN'T GO HOME AGAIN — Richard Recchia, executive vice president and chief operating officer of **Mitsubishi Motor Sales of America Inc.,** is a native Detroiter, but he has become the unofficial spokesman for the Japanese auto industry. He told the International Motor Press Association last week that that has made him persona non grata in some Detroit circles. Said Recchia, "After she saw some of the newspaper articles, my mother called me and said they had confiscated my Detroit passport."

Bohn secured at Porsche helm as family takes heat for conflict

DIANA T. KURYLKO
Staff Reporter

FRANKFURT — Arno Bohn last week won his board's unanimous approval to continue running Porsche AG for the next three years, but the company's employees and other shareholders are calling for the ouster of the directors who voted a week earlier to sack him.

The 12-member supervisory board unanimously agreed in an open vote last Tuesday to renew Bohn's contract as chairman of the management board until the end of 1995. Less than a week earlier, the five Porsche and Piech family members, whose families own all the Porsche common stock, denied him the two-thirds majority necessary to extend his contract.

Bohn's backers, the six employee board members who lobbied for his continuation, said last week they are not through. They called for the resignation of the Piech and Porsche members from the board, saying they are a disruptive force.

Shareholders with no voting rights — the family members also hold 40 percent of the preferred stock — also will call for the resignations at the Porsche annual meeting on March 13.

Bohn, who only needed a majority on the second round to renew his contract, said in a telephone interview late last week that he found the unanimous vote "very encouraging."

Bohn said he took the vote as a "commitment," meaning he has the financial resources and their backing for the strategies and programs that his management board has developed.

"We are happy that Porsche has moved out of the headlines and we can concentrate on our work," Bohn said.

"This gives me four years - and that is certainly a time frame where one can do a lot in a company. I am pretty confident."

After failing to muster the necessary two-thirds vote for renewal of this contract, Bohn gave the supervisory board an ultimatum — either give him the vote of confidence he needed to stay by last Friday, or he would leave.

All six of the labor representatives on the supervisory board had backed Bohn. But the Porsche and Piech family members had been searching, quite publicly, for a replacement.

Arno Bohn said he found the unanimous vote to renew his contract "very encouraging."

Bohn said he felt no bitterness toward the supervisory board or any family members because of the episode.

"Ende gut, alles gut," he said — "All's well that ends well."

Stephen Reitman, who follows the industry for UBS/Phillips & Drew in London, said the Porsche family's search for a replacement for Bohn was pointless.

"I think that even if Bohn had been replaced, no one could have done anything else with Porsche," he said. "The company is as much a hostage to economic circumstances as much as it is to its own high cost structure."

Long-term, Reitman added, it is highly probable that Porsche will have to be sold or merged into another company. AN

Southeast Toyota faces fine, not loss of license

LINDSAY CHAPPELL
Staff Reporter

A North Carolina administrator has asked for $3 million in fines from Southeast Toyota Distributors Inc., but he declined to recommend that the company's business license be revoked.

Attorneys for the dealers say that fines are not enough.

They said they may appeal to have the license of Toyota's independent Southeastern distributor business revoked as they originally requested if the state commissioner of motor vehicles accepts the hearing officer's recommendation.

The ruling, released on Feb. 21, concluded that high-level managers at Southeast Toyota obstructed justice during an earlier state investigation into its business practices, and also unfairly distributed cars in violation of a consent decree it signed in 1988.

One current Toyota dealer and one former dealer had leveled the complaints against the Deerfield Beach, Fla., distributor, and requested that its license be revoked in North Carolina. The 1988 decree stipulated that the state's Department of Motor Vehicles could do so if other evidence of wrongdoing ever emerged.

Hearing officer Judge Robert Collier found evidence of wrongdoing, but recommended fining the company $1 million a year for three years and allowing it to continue in business.

The state's commissioner of motor vehicles must now decide whether to accept the judge's finding or whether to assign a ruling of his own.

A statement released by Southeast Toyota said the company had accepted the judgment and is "extremely pleased" that Collier would permit it to continue distributing Toyota vehicles in the state.

Meanwhile, a Miami attorney has filed a federal class-action lawsuit against Southeast Toyota. The suit seeks more than $100 million.

If a U.S. District judge agrees,

GM is most 'American' automaker

WILLIAM R. DIEM
Assistant Managing Editor

General Motors is the most American of the top eight automakers.

Although it sells Japanese-built Geos through apple-pie Chevrolet dealers, 83.5 percent of the cars and trucks it sold in the United States last year were assembled in the United States. Ford Motor Co. follows at 81.2 percent, and Chrysler Corp. at 66.2 percent.

The most "American" of Japanese auto assemblers is Honda. If an "American company" is one that domestically assembles half or more of the vehicles it sells in the United States, Honda qualifies. In 1991, Honda built 50.8 percent of its U.S.-sold cars at Honda of America Manufacturing Inc. in Ohio.

Being big causes GM some statistical troubles. Besides having the highest percentage of U.S.-built cars, the giant also imports more vehicles than any other automaker, principally from its Canadian factories. Within the auto industry, Canadian-built vehicles are typically classified as "domestic."

Debates over "import" vs. "domestic" and "American" vs. "Japanese" are complex. The Buy American movement appears to be fading after just a few weeks as those complexities become widely understood. The definitions of each term change fluidly and can be manipulated to support a particular point of view. For instance, the American International Automobile Dealers Association recently

Yoshihiro Wada said Mazda will not back off on product development for its Amati luxury line, slated to hit U.S. shores in two years.

UNDER PRESSURE

New Mazda President Yoshihiro Wada challenged by spending cuts, Ford talks

RICHARD JOHNSON
Staff Reporter

TOKYO

The new president of Mazda Motor Corp., Yoshihiro Wada, warned last week that pressure on earnings will remain "severe" this year and next and that capital spending will be reduced in each of the next two years.

But with the Amati luxury brand only two years away from its American debut, he said, the company will not back off on product development for its new line of premium models.

In his first interview with the foreign press since becoming president in late December, Wada also said that talks with Ford Motor Co. on sharing production in Europe are going "slowly."

He hinted that no decision can be expected before summer — several months after the companies had previously suggested that negotiations were likely to be wrapped up.

Still, Wada underscored Mazda's commitment to a global partnership with Ford, which owns 20 percent of Mazda.

"In the future this company could not survive alone," he said. "This alliance is very important."

Wada, 60, joined Mazda in 1983. Since August 1988, he has been executive vice president and general manager in charge of corporate planning operations. His background is finance, having joined Mazda after a 28-year career at Sumitomo Bank Ltd., where his last job was general manager of the head office.

Wada replaced Norimasa Furuta, 63, who was named vice chairman after serving as president since December 1987.

U.S. buyers must wait for CRX replacement

RICHARD JOHNSON
Staff Reporter

TOKYO — Honda Motor Co. introduced its all-new CR-X del Sol coupe in Japan last week, but the targa-top two-seater isn't expected to reach America until summer at the earliest.

In addition, the CRX replacement's attention-getting electric roof may not be offered in the United States at all.

The CR-X del Sol, which also will debut at the Geneva auto show this week, will go on sale in Japan March 6 through Honda's Verno sales channel with a monthly sales target of 1,500.

"We hope it is in the United States before summer," said Honda President Nobuhiko Kawamoto. But he added that production snags at the Suzuka plant could delay its U.S. introduction.

Executive Vice President Yoshihide Munekuni said a summer launch might be feasible.

"The reason for the delay in introduction in the U.S. is the production," said Munekuni. He said raising the output of "this very special car" will take time.

But other Honda sources said the new car may not arrive in the United States until early fall. They also said it will lose the CRX designation for the American market, where it will be called the Civic del Sol. Although it is CR-X is Japan, it was CRX in the United States.

In its push to appeal to younger consumers in its home market, Honda went all the way to an open car. But to strike a balance between enclosed coupe comfort and Mazda Miata-style fresh-air excitement, Honda engineers developed an automatic, electrically controlled steel roof dubbed the Transtop.

The targa top, the most entertaining roof mechanism since the debut of the 1989 Mercedes SL, opens at a push of a button and takes only a few seconds to open. Honda also offers a manual roof system, a lightweight aluminum top that is stored in the trunk.

Kawamoto joked that he and other purists weren't sold on the roof-raising idea at first. They credited Koutaro Shige, CR-X del Sol project leader, with persistence in pushing the concept to fruition.

Munekuni said Honda still has not decided to offer a U.S. version with the Transtop.

"Americans look first at the price, and the electric roof is priced higher," said Munekuni.

In Japan, the Transtop carries a premium of about 170,000 yen ($1,330 at current exchange rates). Munekuni predicted that about 45 percent of Japanese customers will choose the Transtop roof.

The CR-X del Sol is offered with the Civic's 170-horsepower, 1.6-liter, dual-cam VTEC engine and a 130-hp, 1.5-liter version. The car is 157.4 inches long, up from 149.6 inches on the previous model. Width is 66.8 inches, compared to 65.9 inches on the predecessor, and it has a curb weight of 2,403 pounds (2,513 with Transtop), up from 2,138 pounds.

Prices in Japan range from 1.37 million yen ($10,700) for the manual-transmission 1.5-liter version to 1.97 million yen ($15,400) for the SiR Transtop with 1.6-liter engine and four-speed automatic.

At the push of a button, the CR-X del Sol's trunk lid raises above the roofline and, via a system of cables, drops the electronically controlled steel roof into place over the top of the B-pillar.

GM loses $4.5 billion; '92 outlook also grim

CHARLES M. THOMAS
Staff Reporter

Despite a grim 1991 fourth-quarter net loss of $2.5 billion and a record loss of $4.5 billion for the year, General Motors could reap a profit sometime after the first quarter if auto sales heat up.

The Big 3 reported a combined net loss of $7.5 billion for 1991, the worst year in history.

Without a dramatic upturn in vehicle sales, GM will likely end 1992 with a loss for the third consecutive year, analysts say.

But the outlook for next year is brighter. "GM has a good chance of being profitable for all of 1993," said Jean-Claude Gruet, auto analyst with New York-based UBS Securities. "North American operations won't be profitable until at least 1994."

If there is no spring sales upturn, analysts say GM will lose money every quarter, though less than in 1991.

"The goal of company officials is just to break even," said Maryann Keller, analyst with New York-based Furman Selz Inc. "They expect GM to show significantly reduced losses this year."

But that will depend largely on a rebound in the economy. Though sales topped last year through Feb. 20, consumer confidence in February was the lowest since 1974, according to The Conference Board, a New York-based research group.

"We're not getting any clear signals that the economy is about to blast off," said Keller. "Consumer confidence isn't exactly at a level where dealers will order an additional 40 or 50 cars."

Still, GM's losses are narrowing. The fourth-quarter loss was $519.8 million before a one-time charge of $1.8 billion for future plant closings and other non-recurring items. The $519.8 million compares favorably to a loss of $1.6 billion in 1990.

GM lost about $7 billion in its North American operations in 1991, but it earned $2.1 billion in Europe and Latin America.

Worldwide factory sales to dealers totaled 7,015,000 units, a decline of 5.9 percent from 1990. But fourth-quarter factory sales were 1,878,000, an increase of 7.6 percent over 1990.

And earnings at GM's subsidiaries continued to rally. General Motors Acceptance Corp.'s earnings increased to $1.4 billion in 1991, up 15 percent.

Electronic Data Systems Corp. earned $547.5 million, up 10.2 percent over 1990. And for the first time since GM acquired EDS in 1984, revenue from non-GM customers exceeded revenue from GM.

GM Hughes Electronics Corp. earned $559 million in 1991, down from $726 million in 1990.

Mid-February sees sales hike over bleak '91

JIM HENRY
Staff Reporter

Sales increased in mid-February for the third straight 10-day period. Sales of cars and light trucks from Feb. 11-20 totaled 335,669, a gain of 5.7 percent over the same time last year.

Year-ago numbers were war-torn poor. Still, the daily selling rate for mid-February was 6.2 percent above early February. And it was the first time since December 1990 that sales have topped the year-ago total in three consecutive 10-day periods.

Some dealers reported increased floor traffic. Lots of people are "just looking," but at least they're looking, said Eli Bloom, a Pontiac and Saturn dealer in Long Island City, N.Y.

"Buy American" hoopla continues, but if it is affecting buying behavior, it's hard to find documentation. While sales for the Big 3 rose 2.2 percent, the biggest Japanese companies reported substantial gains. Sales for Toyota Motor Sales U.S.A. Inc. rose 52.6 percent to 32,515 cars and light trucks. Sales for American Honda Motor Co. Inc. rose 15.7 percent. And Nissan Motor Corp. in U.S.A. was up 10.7 percent.

Mid-February had nine selling days this year and last year.

Toyota last month announced a price increase that will take effect March 13, and that may have motivated some people to buy now. The increases range from $200 for the cheapest Toyota to $2,100 on the top-of-the-line Lexus LS400. Lexus sales jumped 151.1 percent in mid-February.

"Not one person comes in here and talks Buy American," said Joe Mattarella, general manager of Delray Toyota in Delray Beach, Fla., one of Toyota's top-selling U.S. dealerships.

"They're buying the Camry because it's got a good reputation, and it's priced well," he said.

In January, Delray Toyota sold 321 new Toyotas, more than twice as many as in January 1991. February sales were similar, Mattarella said.

Delray Toyota is part of a 15-dealership chain owned by Edward Morse, one of the nation's top-volume Chevrolet dealers. Morse's Saturn, Cadillac and Chevrolet stores also reported improvement.

RECREATIONAL VEHICLES

Ford fields lighter RV chassis

DETROIT — Ford Motor Co. will begin producing a new 15,200-pound gross vehicle weight version of its F Super Duty motor home chassis for the RV market.

The new chassis, available only on a 178-inch wheelbase, is priced at $15,916, according to Jerome Mittman, Ford RV sales manager.

Mittman said the chassis is aimed at Chevrolet's market. Chevrolet's chief strength is in its 14,500-pound gvw chassis. Until now, Ford has offered only a 17,000-pound gvw version of its Super Duty for the RV market.

Glaval hikes van production

ELKHART, Ind. — Glaval Inc., the industry's second-largest van converter, said its orders increased to 1,310 for January. That is nearly double the 610 of January 1991, according to Kevin Slater, Glaval vice president of sales.

Slater said February has also been tracking at twice the level of a year ago.

The converter is currently producing 85 units a day, up from 55 a year ago. It will increase production to 100 units a day by March 20 and expects to peak at 125 units a day, its maximum capacity, during April and May.

Conversion sales picking up

Big 3 helping with incentives

JOSEPH BOHN
Truck Editor

Aided by the impending spring market and wholesale and retail incentives, van conversion sales have been picking up steam.

General Motors further stimulated demand by announcing a new floorplan allowance program for dealers.

Under the program, Chevrolet and GMC dealers receive 60 days of free floorplanning on each full-sized van conversion ordered between Feb. 21 and March 20.

The program is geared to moving units out of converter inventory and onto dealers' lots.

Because of GM's shutdown of the Lordstown, Ohio, full-sized van plant on March 20 for model changeover, Chevrolet and GMC have encouraged converters to stock up on extra van chassis to carry them through the critical spring and summer selling months.

The new program will help distribute units more evenly between converters and dealers.

But it also reflects GM's view of steadily building retail activity, said Gary Soos, general manager of Custom Craft Vehicles in Milwaukee. Custom Craft is a major Chevrolet and GMC converter.

"If retail were in the toilet, they wouldn't put out a program like that," Soos said.

Custom Craft has been "seeing retail get a little better each week," he added.

"The spring market is really beginning to take hold," Soos said.

Soos believes, in fact, that there will be a shortage of van chassis in July and August.

Soos said that because GM converters had to place advanced orders due to Lordstown's shutdown, they pretty well know how many chassis they will have to work with during the 1992 model year.

Soos believes the extent of the shortage will depend on how quickly GM gets the Flint, Mich., plant running.

The Flint plant will build the vans previously built at Lordstown.

Jim Green, Chevrolet assistant RV manager, confirmed that GM will have limited capacity to supply 1992 model full-sized vans once Lordstown goes down.

According to his calculations, full-sized van production will be cut 80 percent until the Flint plant is in full operation.

The Michigan plant will begin production in August. But until then, only the Scarborough, Ontario, plant will be producing full-sized vans.

Consequently, chassis availability will be tight.

Chassis will be doled out to converters partly on the basis of how much inventory they have and how quickly they're selling their vehicles — the traditional "turn and earn" system — as well as on how many they ordered, Green said.

GM has taken a number of steps to stimulate the market.

It has been giving converters virtually free floorplanning for 180 days on full-sized van chassis ordered after Nov. 1.

And, more recently, in addition to its dealer floorplan incentive, it raised customer rebates on its vans.

Chevrolet and GMC are offering:

- $1,000 rebates on upfitted, full-sized 1991 and 1992 vans.
- $400 on 1991 model upfitted Astro and Safari models.
- $500 on upfitted 1992 model Astro and Safari vans.

All incentives run from Feb. 18 to March 31.

Ford Motor Co. also has been giving dealers 150 days of free interest on full-sized Econoline van conversions ordered prior to March 3.

Dodge has perhaps the strongest dealer incentive on conversions. Dealers who sell two van conversions in a 30-day period receive $500 on each of them. They get $1,000 on the third and fourth units they sell during the 30-day period and $2,000 for the fifth and additional units.

This program runs Dec. 21 to March 31. Dodge also has consumer rebates of $1,000 on its full-sized van conversions running in all its sales regions except the Northeast during the same period.

Converters hang back on Chrysler minivans

JOSEPH BOHN
Truck Editor

Chrysler Corp. has made some inroads into the van conversion market with its minivan.

But it isn't likely to take a sizeable share of the market until at least the 1993 model year.

The price of the Dodge Caravan C/V is the main obstacle to its success in the van conversion market, according to Jim Lynch, Dodge special vehicle sales manager, and independent converters.

Dodge began offering a special van conversion prep package for the Caravan C/V in the 1992 model year.

Lynch: price an obstacle

It had hoped to develop new niche markets for the minivan as a result of extra production capability garnered through agreements worked out with the UAW.

But only two converters have converted any Caravan C/Vs. They are American International/Gerwin of Bristol, Ind., and Elk Enterprises Inc. of Elkhart, Ind.

Lynch said the full-sized vans, including conversion units, are heavily incentivized while minivans are not.

Chrysler has a consumer rebate of $1,000 on its full-sized van conversions and additional dealer incentives of $500 to $2,000 per unit until March 31, according to dealers.

Lynch said Chrysler's truck marketing people are studying the pricing of the minivan chassis to see what they can do to make it more competitive in the conversion market for 1993 model year.

Kevin Slater, sales manager for Glaval Inc. of Elkhart, Ind., also said the size of the Ford Aerostar and Dodge Caravan C/V make them harder to convert than the Chevrolet Astro and GMC Safari.

He said the Caravan C/V has less headroom than the GM compact vans.

Bob Wolfe, owner of Advanced Creations in Romulus, Mich., said seats and other parts are not readily available, either.

He said that even if a converter found a seat supplier, this is not the time to open a new account, go through compliance registration and do the work to get into converting the Caravan C/V.

"This isn't the time of year to prototype vans. It's the time to build them," he added.

Wolfe, like other converters, has seen a solid pickup in his business.

"Instead of dealers being oversupplied, we're fighting to get units to them. The market has really turned around in the last two weeks," Wolfe said.

He said the greatest rise in demand has been in medium to high-priced conversions. That indicates a strong revival in demand among affluent buyers.

Winnebago raises the roof

Winnebago Industries Inc. of Forest City, Iowa, has a new SL raised-roof van conversion for business and pleasure. It features standard running boards. A choice of bumper steps and mag wheels are available.

RVIA says safety rule restricts converters

RESTON, Va. — Van converters are now meeting Federal Motor Vehicle Safety Standard 208 that pertains to occupant protection in crashes.

Still, the Recreation Vehicle Industry Association felt that officials at the National Highway Traffic Safety Administration should have postponed the effective date of the standard for van converters from September 1991 to September 1992.

Ed Conway, assistant general counsel for RVIA, said the standard still restricts much of what converters can do to vans.

The association also stressed that in the future, NHTSA should give second-stage manufacturers, such as van converters who finish off incomplete chassis, more time to meet major safety standards than single-stage manufacturers.

Making the new regulations effective for both the Big 3 and converters at the same time last fall threw the conversion industry into a tizzy because Detroit didn't issue instructions on how to proceed with its chassis until the last minute, Conway said.

Converters who produce vans for the handicapped have gotten relief from the standard through the efforts of the RVIA. Conway said NHTSA had granted his petition to exempt vans for the handicapped from its crash requirements in Standard 208, but has not yet posted the proposed notice of rulemaking to provide the exemption.

Converters were refusing orders to put wheelchair lifts into vans because such installations required more modification than in a regular conversion.

Conway said that move essentially limited the ability of handicapped individuals to travel and seek work.

S. Korea pushing hard to diversify export base

OLES GADACZ
Staff Correspondent

SEOUL — South Korean automakers are leaving no stones unturned in their global search for new markets.

In 1988, when the industry's exports peaked at 546,310 units, Korean cars were selling in 102 countries. But two markets, the United States and Canada, accounted for over 80 percent of sales.

To counter a steep sales slump in North America since then, Korean automakers have pushed aggressively into new markets.

Their diversification efforts appear to be paying off. Although the industry's overseas shipments in 1991 were off 30.7 percent from the 1988 high, its vehicles are now selling in 145 countries. And its dependence on the U.S. and Canadian markets was cut to 60.4 percent of the industry's total exports last year.

Shipments in 1991 to the United States, still the industry's largest export market, fell 12.8 percent from 1990, to 171,024 units. As a result, the U.S. share of Korea's total auto exports dropped to 45.2 percent.

In sharp contrast, exports to Europe skyrocketed 146 percent last year, to 72,860 units, making Europe Korea's second leading export market. In 1990, Europe accounted for just 8.7 percent of Korean exports. Last year, exports to the region grew to 19.2 percent.

The United States, Canada, Taiwan, Australia, Poland and Britain each imported more than 10,000 Korean-made vehicles in 1991. Countries importing more than 5,000 Korean-made cars in 1991 included Greece, Italy, Germany, the Netherlands and the Philippines.

FILLING THE PIPELINE

"In general terms, you have to be impressed with the progress the Koreans have made," says Melissa Brown, who follows the industry for Barclays de Zoete Wedd Securities. "It's very important that they extend their distribution channels, and Europe is a very difficult, complex market to penetrate."

But Brown says she is not at all confident that the new markets are generating any profit for Korean carmakers. A large part of the increased shipments must be attributed to "pipeline filling," she says.

"Whenever a new company sets up distribution, you have to bring in inventory, and we've seen a number of new markets (emerge) in Europe," she says. "There are times when the aggressiveness of Koreans will pay off, but the major question is how profitable it'll be."

Hyundai Motor Co. blazed the European trail for Korean automakers in 1991 by beginning distribution in a number of new markets, Germany being the most important.

SOUTH KOREA'S VEHICLE EXPORTS

	1990	Percent of total exports	1991	Percent of total exports	Percent change
United States	196,286	57.8	171,024	45.2	− 12.8
Canada	54,888	16.2	57,592	15.2	+ 4.9
Europe	29,605	8.7	72,860	19.2	+146.0
Others	58,662	17.3	77,124	20.4	+ 31.5
Total	**339,441**	**100.0**	**378,600**	**100.0**	**+ 11.5**

Source: South Korea Ministry of Trade and Industry.

Hyundai says its shipments to Europe this year will rise 32 percent from 1991, to 90,000 units, while Kia Motors Corp. foresees exports of 7,200 units, double the 1991 figure.

Last year, the two shipped a combined total of 72,300 cars to 21 European countries, up 127 percent from 1990.

Hyundai has been a big winner in the former Communist Bloc. The company shipped 10,278 cars to Poland last year, up from 610 in 1990. But sales to war-ravaged Yugoslavia, which in 1990 surged to 8,300 units from virtually zero in prior years, tumbled to 4,665 units last year.

Sales to Italy jumped from 3,034 in 1990 to 8,409 in 1991, while sales to Greece rose from 1,584 to 9,349.

EAST EUROPE TARGETED

Automakers here plan to raise their export goals for Eastern Europe by up to 58 percent this year. According to the Ministry of Trade and Industry, South Korea's five automakers plan to ship 28,350 cars to the region in 1992, up from 17,880 last year.

Hyundai, the largest, will ship 11,000 passenger cars this year to Poland, including Excels, Scoupes and Sonatas. Hyundai also plans to export 2,000 cars to Hungary, the former Soviet Union and Yugoslavia. About 1,500 units are to be shipped to Czechoslovakia, 1,200 to Bulgaria and 300 to Romania.

Kia Motors, following its debut in the British market in 1991, isn't planning to expand in Europe until 1993. By next year, Kia hopes to have patched together a network of dealers and distributors throughout Europe to handle its newly developed Sephia subcompact and Sportage sport-utility.

Kia exported 3,500 Ford Festiva-based Prides to Britain last year, and expects to ship 5,000 units this year.

According to an unconfirmed report, Kia has orders for 800 Prides from the former Soviet Union for delivery this year, and is gearing up to begin shipping its all-new Sephia to Poland and other Eastern countries beginning next year. Kia also will export 200 trucks to Bulgaria this year.

FRENCH BAN LIFTED

Korean automakers also are setting their sights on the French market this year. In the hopes of clinching a multi-billion-dollar contract from Korea for the TGV high-speed train, the French government last month lifted its import ban on Korean cars.

France was the only state in the European Community to ban imports of Korean cars.

Korean automakers say they expect to export a combined 5,000 cars a year to France, with the first shipments likely during the second half of this year.

Korean automakers also are setting high export goals for Central and South America. Their moves come as many countries in that region are lifting restrictions on car imports and lowering tariff rates on imported cars.

Hyundai is projecting exports to Latin America of 15,000 units this year, doubling 1991 shipments.

Kia also plans to sell more than 10,000 cars in Central and South America this year, compared with 3,200 last year.

Hyundai, whose main markets in the region were Panama and Puerto Rico last year, will explore car markets in Brazil, Argentina, Peru, Venezuela and Colombia.

Kia will mobilize the Ford sales network to export Pride cars to Venezuela while building its own sales arm in Brazil and Colombia.

Brazil, Colombia, Peru, Venezuela and Argentina have steadily lowered the tariff rates on car imports since 1990. The rates now range from 15 to 35 percent. AN

Jaguar recalls XJS

DETROIT — Jaguar Cars Inc. is recalling about 11,000 1989-91 model V-12 XJS cars to check for a condition which, if unattended, could lead to an engine fire.

The company said a high-tension ignition coil could be moved and cause excessive wear on a fuel injector hose. That, in turn, could eventually leak and cause a fire.

— *The Associated Press*

Hyundai names Garavelo as official importer for Brazil

SAO PAULO, Brazil — The Garavelo Group, a major distributor of new vehicles through Brazil's unique car-buying clubs, has been named the country's official importer of Hyundai models.

The Sao Paulo-based group said it expects to receive its first shipment of 300 cars this month.

Garavelo said it expects to import 6,000 units this year, building up to 7,200 or more in 1993 and beyond. The company will market the Excel, Elantra, Scoupe and Sonata through a proprietary dealership in Sao Paulo and 150 franchised outlets in the rest of the country.

Prices will range from $17,000 for the Excel to $47,000 for the Sonata, the company said.

Garavelo said it will invest some $3 million this year on inventory and $10 million on plant, parts, promotion and training.

NADA WOOS MEXICO DEALERS

MONTERREY, Mexico — The National Automobile Dealers Association has extended associate membership to dealers in Mexico.

In an address delivered to the Asociacion Mexicana de Distribuidores de Automotores AC last week, Richard Strauss, NADA president, announced the new International Dealer Affiliate program.

Affiliate members receive all mailings sent to NADA members and also may participate in a wide range of educational conventions, meetings and consulting services.

AD TABLOID WORKS IN OHIO

AKRON, Ohio — A monthly dealer-advertising tabloid launched in October in Akron has been so popular with dealers it has become a weekly publication with lower ad rates.

The first weekly issue of *Dealer's Automotive* is due out March 4, said Terry Gwinn, the publication's general manager. As a monthly, the publication charged $3,266 for a full-page ad. Based on the assumption that dealers will continue to advertise at the current level, the full-page rate for the weekly publication will drop to around $2,000, Gwinn said.

About 50 of the 60 franchises included in the publication's distribution area advertise in the publication, he added.

Dealer's Automotive is owned by 35 dealers in the Akron area and contains one or two pages of editorial in each 24-page issue. The publication has a circulation of 240,000.

CANDIDATE COURTS DEALERS

INGLESIDE, Texas — Mark Crawford, candidate for the Texas state Senate, is pushing a dealer issue as one of his main campaign themes.

Crawford is echoing dealer complaints that manufacturers are cheating dealers out of money by paying them less than the retail amount when they do warranty work.

"For years, we've had a law on our books that states in no event shall any manufacturer or distributor pay its dealers an amount of money for warranty work that is less than that charged by the dealer to retail customers for non-warranty work of like kind," Crawford said in a press release.

Manufacturers generally pay dealers less for parts and labor when they do warranty work than the amount dealers charge to consumers for non-warranty retail work.

Crawford said car owners would get better warranty service and non-warranty costs would be lower if the law is enforced.

BATTERY WINNERS DUE SOON

DETROIT — The battery consortium formed by the Big 3 to invent a new battery for electric cars indicated it may soon announce the technologies it will investigate.

Frank Jamerson, chairman of the consortium's technical advisory committee, said the group met with representatives of five national laboratories and ironed out all the terms and conditions of several research contracts. None has yet been announced, but Dreisbach ElectroMotive Inc. of Santa Barbara, Calif., said its zinc-air battery proposal was one of the winners.

Jamerson told an audience at the SAE convention that the U.S. American Battery Consortium was meeting most of its deadline targets, but he admitted that it had missed goals of naming half a dozen target battery technologies last year.

TOYOTA

Distributor for Southeast faces class-action suit

continued from PAGE 3

every existing and former Toyota dealer in Florida, Georgia, Alabama and the Carolinas could choose to become a party to the Miami lawsuit.

One current North Carolina Toyota dealer, Bobby Murray Toyota-Mitsubishi Inc. of Rocky Mount, N.C., and three former dealers brought the suit against Southeast Toyota Distributors Inc., of Deerfield Beach, Fla.

The new suit is similar to others the company faces around its exclusive territory. The group alleges that in the 1980s Southeast Toyota manipulated vehicle allocations to reward or punish Toyota dealers for their actions, and coerced dealers into accepting unwanted vehicles and accessories.

Southeast Toyota management has denied such charges in previous lawsuits.

Altogether, Southeast Toyota is facing more than a dozen lawsuits from current and former dealers who allege predatory business practices by the distributor.

A complaint has also been filed in South Carolina that would revoke the company's license there.

The first lawsuit against Southeast Toyota came to trial in January in South Carolina, where a jury decided in favor of a Toyota dealer based in Florence.

That dealer may be awarded damages of up to $16.5 million. ■

MADE IN U.S.

Study of content finds GM has most, Mazda least

continued from PAGE 3

distributed a pamphlet in which it classifies Big 3 models built in Canada as "imports" and Japanese-brand models built in Canada as "North American."

This story and its accompanying chart examine where cars are assembled.

Of the Big Five Japanese brands, Toyota is next-to-last in American assembly at 29.6 percent. When an expansion of its Georgetown, Ky., plant is complete in 1994, that percentage will rise. In absolute numbers, Toyota was the largest importer from Japan in calendar 1991.

Mazda was the least American of the Big Five Japanese companies: 25.8 percent of its U.S. sales were assembled in the United States, including the Navajo sport-utility built by its partner, Ford Motor Co. At the same time, Mazda expects to be the first Japanese company to qualify cars it builds as a "domestic" fleet by EPA standards when it begins selling the 1993 MX-6 and 626 models built in Michigan.

Ford is the least Japanese of American companies. Ford sells no Japanese-assembled cars here, although it does sell Probes made by Mazda in Michigan. Ford's Pacific Rim suppliers are in Australia (Mercury Capri made by Ford Motor Co. of Australia Ltd.) and Korea (Ford Festiva, made by Kia Motors Corp.).

Among the eight automakers considered here, the Big 3 plus Honda and Toyota all import cars from Canada. Chrysler relies on Canada the most, for 19.6 percent of its vehicles.

Many Americans and some Canadians see Canada as just a different kind of state. Under the U.S.-Canadian Auto Pact of 1965, cars built in Canada can be imported without paying duty if the combined U.S. and Canadian content is 50 percent or more.

The Big 3 also import cars from their own factories in Mexico. The carmakers don't announce the combined Canadian/U.S. content of those cars, but the Mercury Tracer has more than 75 percent of such "North American" content.

The companies blend Mexican cars into their U.S.-Canadian "domestic" fleet when they report sales. But by using Mexican production and import records, the Automotive News Data Center can estimate their effect. Chrysler is the leading importer from Mexico, building 9.5 percent of its fleet there.

Assembly isn't the end of the story. Many parts of vehicles assembled in the United States are imported. In general, Big 3 vehicles assembled in the United States have a much higher percentage of U.S. content than do Japanese transplant vehicles. ■

WADA

New Mazda president has his share of challenges

continued from PAGE 3

Kenichi Yamamoto remains as chairman.

Mazda, which is in the midst of a new product binge unprecedented in the company's history, will report a 60 percent drop in profit for the fiscal year ending March 31. The company expects unconsolidated pretax profit to slide to about 20 billion yen (about $156 million at current rates), a reduction of some $47 million from earlier estimates and a 59 percent decline for the year.

"Regarding our profitability, 1992 and 1993 performance will continue to be severe," said Wada. "However, we are getting the money from our new models. These models are selling and yielding a profit. By using this profit, we can make new models."

Last year, Mazda launched the new MX-3, RX-7, 929, 626 and MX-6 models. Other debuts included offshoots of the 626 and 929 called MS-6 and MS-9 for the new Anfini channel in Japan. The company also has launched the Eunos 500, a small, upscale sedan that will be introduced in Europe this week at the Geneva auto show as the Xedos 500.

The heavy spending on new models has come at a time when all of the company's major markets are in a downturn.

Wada: expects new segment

"This year's capital spending probably will be the peak," Wada said.

But Wada said that preparations for the premium-car range to be marketed through new channels in the United States and Europe remain on course.

"We will continue with that this year and next year," he said. "The car has a long lead time, so we should take a look at five years ahead. If we shrink at this time, the impact will appear in five years."

Meanwhile, Wada said it would be "premature" to discuss how Mazda plans to differentiate its Amati franchise from Japanese competitors like Lexus and Infiniti. He said only that "Mazda cars always have a distinction from other makers."

In Japan, Mazda's ambitious steps to expand its presence at home have resulted in the addition of 1,200 sales outlets in the last 3½ years. The company has established five separate sales channels as part of a goal to attain 10 percent of Japan's car market by 1993, up from the current 7.3 percent.

The channels include the Mazda network, selling mainstream models ranging from the Familia/323 to the Sentia/929; the new Anfini channel that replaced Mazda Auto and offers sportier models such as the RX-7; the Eunos channel, with a product range geared for younger buyers, including the Eunos Roadster, the Japanese name for the MX-5 Miata; Autorama, which markets Ford Motor Co. models; and Autozam, selling minicars.

But the company has been criticized for bombarding the market with several new models at once, including spin-off versions with different names to fill out the product ranges of the various channels. Some critics contend that the multiplicity of models confuses the market.

But Wada said bluntly: "There is no confusion."

He said Mazda has positioned itself through additional channels to meet the sales demands of Japan's so-called "echo generation" during the 1990s.

With about 10 million people between the ages of 15 and 19 in Japan in 1989, he said "these people will be grown up and they will have a driver's license. In the decade of the 1990s new demand will increase substantially and these people will want something fun to drive. So a new segment will appear in this decade."

Mazda also is raising capacity to meet the new demand. Part of the response is a new plant that opened last month and which will produce Mazda's future premium cars. The plant is designed to produce 150,000 units annually, 20,000 of which are targeted for export to the United States.

Mazda's domestic vehicle sales declined 7.7 percent last year, to 556,000 units. But the company's prediction of an 11.5 percent increase this year, to 620,000 units, is by far the most optimistic forecast of all Japanese companies.

Wada believes the American and Japanese markets bottomed out in 1991, but he expects soft recoveries in both countries. In Europe, the Mazda president worries about a downturn in Germany, where Mazda is particularly strong. But he thinks the overall European market could repeat last year's sales level.

Mazda's sales in Germany trail only Nissan and Toyota among Japanese companies. Mazda's unofficial totals last year were 112,952 units, good for 2.7 percent of the market.

Mazda is facing some serious decisions about its future in Europe. Talks aimed at joint production in Europe between Ford and Mazda have sputtered for years and are now "going slowly," he said.

Previous plans to build Mazdas at a Ford plant in Germany collapsed, and the two companies are now discussing an agreement whereby Ford of Europe would build Ford-based, Mazda-badged models on consignment.

The Eunos 500 will debut in Europe as the Xedos 500 at this week's Geneva auto show.

"This project has taken three years, and it would be a lie if I said I was not disappointed," he said. "However, if by doing this hard work, it takes a lot of time, I can understand the delay."

Wada said exports from Mazda's Flat Rock, Mich., assembly plant to Europe figure into the company's strategy.

As for how those cars will be treated by the European Community — as American or Japanese — he said "that is between America and the EC."

Sources say 626 shipments from Flat Rock to Europe will begin in late 1993.

On other topics, Wada said it is "impossible to predict" whether Japan's Ministry of International Trade and Industry will lower Japan's voluntary ceiling on exports to the United States for the new year beginning April 1.

But, he said, Japan's regulators are now caught between U.S. demands for lower exports and other nations' charges that a separate deal with Washington will violate international trade rules.

"The correct or right action to take is very difficult to determine," he said.

"If we don't change this limit, there will be a reaction. And if we do change the limit, there will be a reaction. So any way we turn, there will be a reaction." ■

INCENTIVE WATCH— DEALER INCENTIVES

CONTINUING PROGRAMS

ACURA (1991 models, expires May 1)

Legend sedan	$2,500
Legend coupe	$3,000
Integra (expires Feb. 3)	$500

AUDI (1991 models, no expiration date)

Audi 100 and 200	$1,500
Audi 90	$1,000

Rebates apply to models purchased by dealer from Audi of America port stocks.

BMW (no expiration date)

750iL (1991)	$10,000

CHEVROLET (expires May 4 on 1991 models, June 4 on 1992 models)

Corvette ZR-1	$2,000
Other Corvette	$1,000

HONDA (expires March 3)

Accord (1991)	$500

740 series	$1,750-2,500
940 series	$1,500-2,500
780 coupe	$2,500

GE Capital buys Europe fleet leasing business

CHARLES M. THOMAS

Staff Reporter

GE Capital Fleet Services is on the prowl again with an agreement in principal to purchase Avis Lease's European vehicle leasing and fleet management business consisting of 120,000 vehicles in 14 European countries. GE declined to release terms of the purchase.

The leasing giant has also acquired Ballas Leasing Inc.'s 2,300-vehicle lease portfolio for $23 million through its McCullagh Leasing arm.

GE's acquisition of Avis Lease makes it the largest leasing company in Europe. It is already the leading fleet-lease company in the United States. Avis' European operations has total assets of approximately $900 million.

"The acquisition of Avis Lease is part of our strategy to expand GE Capital's focused approach in European markets," said Gary Wendt, chief executive officer of GE Capital.

Avis keeps its daily rental business in Europe, but Avis Lease will continue to use Avis Rent A Car for its pre-delivery and replacement car requirements in Europe.

In the Ballas acquisition, offices in Toledo, Ohio, will be merged into McCullagh's nationwide network of regional business centers in Detroit.

"This acquisition allows McCullagh to strengthen its regional service network in a key market," said Jim Culotta, president and general manager of McCullagh.

Minneapolis-based GE Capital Fleet Services is the largest corporate fleet management company in North America with more than 500,000 cars, trucks and specialty vehicles under lease, management and administration services.

In just six years, GE Capital Fleet Services has acquired eight fleet leasing companies. The company's strategy is to build a fleet leasing company that can deliver vehicles anywhere in the nation. Most of the acquisitions were regional firms that had served several states.

Though growth is expected to slow in coming years, fleet leasing offers revenues from value-added services combining money, knowledge, ideas and specialization for high returns.

Fleet leasing firms help customers manage their fleets by offering services such as title transfers and tax advice, fuel economy data, maintenance tracking and vehicle disposal.

GE buys more than 80,000 vehicles annually through dealers and manufacturers through an ordering dealer, who acts as its agent. ■

RELOCATE

Ford studies moving British headquarters

continued from PAGE 4

"The writing would be on the wall for Dagenham and Halewood if they move research and development out of the country," said Airlie, referring to Ford's two principal manufacturing operations in Britain.

"What eventually would be left would be a screwdriver operation," he said.

The Ford document, a copy of which was obtained from union sources by *Automotive News,* lists a series of steps "that would build towards co-location of Engineering and Vehicle Manufacturing Group, Ford of Europe, functions in Germany."

If undertaken, the relocation — referred to as Option C — would take place in five phases, the document suggests.

The first phase would include the transfer of 108 engineers from Dunton to Merkenich. The company would then transfer 215 body engineers from Dunton to Merkenich. That would be followed by the transfer of 182 chassis engineers from Dunton to Merkenich, and then 290 trim assembly and plastics workers from Avely to Merkenich. Finally, 102 paint engineers would be relocated from Avely to Niehl.

But the document warns that a "major reaction" to the transfers should be anticipated.

"Even Phase I will raise a major reaction from Ford Britain employees and unions who will believe it to be the first step, as indeed it could be, toward a much larger transfer," the unidentified author of the study says.

The reaction might be sufficiently severe to derail plans for a "phased" transfer, the author warns.

"If the decision is made (to implement Option C), this will have to be communicated upfront, and the associated disruption may force rapid rather than phased transfer," the document reads.

Ford has been exploring ways of cutting its costs in Europe amid a troubling sales downturn in Britain and tumbling profits.

The company last month reported a 1991 loss of $1.1 billion on European operations, compared with profits of $145 million a year earlier and a record $1.7 billion in 1989.

The company confirmed last month that it is studying the possibility of relocating its headquarters to the Continent as part of a plan to eliminate thousands of jobs and slash development spending by 25 percent in coming years.

Ford's two principal British plants, Dagenham and Halewood, have long been rumored as targets for closing because of their inefficiency relative to the company's Continental operations.

According to one Ford study, Dagenham-produced Fiestas require 57 man-hours of assembly compared to 33 hours at the company's plant in Valencia, Spain. ■

INCENTIVE WATCH — CUSTOMER INCENTIVES

CONTINUING PROGRAMS

CHRYSLER CORP.

Expires March 31. Finance rates in lieu of rebates from zero to 9.9 percent.

1991-92 models

Chrysler New Yorker Fifth Ave., Imperial	$1,500

SUBARU (expires March 3)

Loyale (1991-92, fwd sedan, awd wagon)	$500
Legacy L, L Plus (1992)	$500

incentive

WATCH

Toyota hikes dealer rebates by regions

Toyota Motor Sales in U.S.A. is offering regional incentives to its dealers as well as national incentives. The company will not disclose details of its regional programs, but Detroit-area dealers are receiving up to $1,900 on pickups, while the national program tops out at $1,500. Toyota's national program expires April 2.

Ford Motor Co.'s $1,000 "Owner Loyalty" incentive on Ford Crown Victoria, Mercury Grand Marquis and all Lincolns expires March 3, rather than March 31 as previously reported by Ford. The buyers collect if they already own a Ford Motor Co. vehicle made by that division. ■

Bidwell joins board of investment firm

CLEVELAND — Bennett Bidwell, retired chairman of the Chrysler Motors subsidiary of Chrysler Corp., has joined the board of directors of McDonald & Co. Investments Inc.

Bidwell, 64, was appointed chairman of Chrysler Motors in 1988.

He retired from Chrysler in 1991.

Bidwell currently serves on the boards of Kerr-McGee Corp. and Kelly Management Group.

He is also chairman and a board member of Pentastar, the Chrysler Corp. parent for Snappy, Thrifty and Dollar rental cars. ■

Output leads '91 by 9.4%

ANNE E. WRIGHT
Chief Statistician

So far this year, car and truck production in the United States and Canada tops 1991 by 9.4 percent. U.S. output is up 6.3 percent, and Canadian producers have assembled 24.7 percent more vehicles than last year.

Last week's estimated car production in the United States was 108,048, down 6.9 percent from the prior week and up 1.6 percent from the 1991 week. In the year-ago week, 14 U.S. and Canadian assembly plants were idle because of high inventories and poor sales. Ten car plants and four truck plants were closed.

For the year to date, U.S. car production is 854,424, down 3.6 percent from the same period in 1991.

Estimated truck production last week in the United States was 83,873, up 8.4 percent from the prior week and up 49.1 percent from the same week in 1991.

U.S. truck producers have assembled 569,861 units this year, topping the same period in 1991 by 25.7 percent.

In Canada last week, car production was estimated at 24,826, up 98 units from the prior week and 10.4 percent above the year-ago week.

Year-to-date, Canadian car production is 150,428, a dip of 0.5 percent from the same period in 1991.

Canadian truck producers' estimated assembly at 20,537 units last week, 10.0 percent below the prior week but 14.4 percent over the same week one year ago.

Thus far in 1992, Canadian truck production is 187,559, an increase of 56.4 percent over 1991.

U.S. and Canadian makers' daily build rate was 47,457 last week, down 1.5 percent from the previous week and up 16.9 percent from the year-ago week.

U.S. carmakers split last week's estimated car production as follows: General Motors, 42.9 percent; Ford Motor Co., 23.6 percent; Honda of America Manufacturing Inc., 9.3 percent; Chrysler Corp., 9.0 percent; Toyota Motor Manufacturing U.S.A. Inc., 4.4 percent; New United Motor Manufacturing Inc., 3.9 percent; Diamond-Star Motors Corp., 3.2 percent; Nissan Motor Manufacturing Corp. U.S.A., 2.6 percent and Subaru-Isuzu Automotive Inc., 1.1 percent.

Mazda Motor Manufacturing (USA) Corp.'s plant in Flat Rock, Mich., is down for changeover to production of 1993 models.

GM scheduled overtime last Saturday at four truck assembly plants: Janesville, Wis.; Moraine, Ohio; Scarborough, Ontario; and Oshawa, Ontario. The Janesville plant also worked overtime last Friday.

Ford scheduled Saturday overtime at the Kansas City, Mo., truck facility last week.

Chrysler's St. Louis (No. 2) truck plant operated two nine-hour shifts last Saturday and is scheduled to operate three seven-hour shifts this week.

Kume successor may be Tsuji

TOKYO — Yutaka Kume will step down as president of Nissan Motor Co. in June and will be succeeded by Yoshifumi Tsuji, executive vice president, according to widespread press reports here.

The company did not deny the reports.

Tsuji, 64, has been executive vice president in charge of production.

Bowler resigns from Porsche

RENO, Nev. — Frederick J. Schwab has been promoted to president of Porsche Cars North America, replacing Brian Bowler, who resigned Friday.

A company statement said Bowler resigned "as a result of differences over the direction of the company's future efforts in the important U.S. market."

New model due for Beijing Jeep

Beijing Jeep Corp., the joint production venture between Chrysler Corp. and China's Beijing Auto Works, has begun work on the next-generation BJ-202 four-wheel-drive vehicle it produces for the Chinese military.

IRS ruling threatens dealers

Tax treatment of service pacts called a killer cost

CHARLES M. THOMAS
Staff Reporter

An Internal Revenue Service advisory on extended service contracts could push hundreds of recession-weary dealers out of business. It also inflicts a crippling blow on independent vehicle service contract administrators by making their programs less competitive than factory programs.

"The IRS position could wipe out 10 percent of the dealer body," warns David Robertson, who is coordinating the lobbying efforts of two independent extended service contract administrators with the Department of the Treasury and IRS to reverse the advisory.

A spokeswoman with the President's Council on Competitiveness, chaired by Vice President Dan Quayle, said Robertson has brought the issue to the attention of both the council and the White House assistant to the president for domestic policy. But she said there has been no decision on whether to put it on the council's agenda.

The most likely alternative is that the council could recommend that it be added to the list of regulations to be reviewed under President Bush's 90-day moratorium on regulations.

Frank McCarthy, National Automobile Dealers Association executive vice president, concedes that some dealers are at risk.

"The timing couldn't be worse because dealers are just coming out of a long recession and have depleted cash flows," he said.

Under the IRS advisory, some dealers are being assessed hundreds of thousands of dollars in interest and penalties. McCarthy cited one instance in which the IRS assessed a dealer $500,000.

The IRS says an extended service contract is prepaid insurance. Hence, dealers should take the income from the sale in the first year and amortize costs over the term of the contract. Dealers were writing off the cost in the first year, too.

Ford Motor Co. triggered the issue when it changed its extended service contract program in 1985, making Ford and Lincoln-Mercury dealers the principals under their programs even though American Road Insurance Co., a subsidiary of Ford, insured the program.

Dealers selling General Motors and Chrysler Corp. extended service contracts are unaffected because the automakers are the principals under those programs and dealers are considered agents.

But dealers who sell independently administered contracts can face IRS audits because they are considered principals.

According to Robertson, at least half of U.S. dealers sell independently administered extended service contracts.

He estimated that 95 percent of the dealers selling the contracts used accounting methods

Bertone's Blitz

Italy's Carrozzeria Bertone last week showed this concept of an electric leisure car of the future at the Geneva auto show. Named the Blitz, the two-seater is described by Bertone as a motorcycle that can be driven without a crash helmet. A working prototype will be shown at next month's Turin show, Bertone said. Other Geneva show news is featured on Page 8.

Trade report: Chrysler 4th in U.S. parts

LINDSAY CHAPPELL
Staff Reporter

If the "Buy American" movement comes down to comparing bloodlines with a blue book from the Commerce Department, Chrysler Corp. could be in trouble.

U.S. plants run by General Motors, Ford Motor Co. and Honda Motor Co. generally use a higher percentage of U.S. parts and materials than most of Chrysler's plants, according to a recent Commerce Department agency report covering the 1990 model year that measures the import of production parts and materials.

The report indicates that Chevrolet's Beretta and Corsica were "more American" than any other cars and trucks made in this country. At the foreign trade subzone for the Wilmington, Del., plant building the cars, GM bought $1.4 billion worth of domestic parts and $800,000 of

Big 3 catch consortium fever in drive to edge past Japanese

First eight groups are 'just the tip'

JOSEPH BOHN
Staff Reporter

In a small room in Ford Motor Co.'s Scientific Laboratories in Dearborn, Mich., Ronald Wlosinski shows off the intricate machinery he uses to test a vinylester composite that may someday replace steel as the structure in cars.

By agreement, he is to spend only one-fourth of his time on the project. Often, though, it works out to more than that. To cover the extra time, Wlosinski frequently puts in 10-hour days. To keep up, he often travels across town to the laboratories of his colleagues at Chrysler Corp. in Highland Park and at General Motors' Tech Center in Warren.

There, on designated days, he can watch GM engineers develop a liquid molding process for the the composite crossmember Ford has given them. Or he can watch them do a brutal "tower test" in which a chunk of composite is smashed at 35 mph.

When the time comes, though, GM and Chrysler engineers will have to visit Ford to see the crash-testing of an entire composite vehicle. Meanwhile, there's still a lot of drafting and other testing to be done by all the parties.

Welcome to the world of automotive consortia. In this consortium effort, 11 part-time researchers from three companies, working on one of four related composites projects, split up their jobs according to their capabilities and the best available facilities.

Consortia, of which there are eight and counting, are the wave of the future in Big 3 research — and possibly one of Detroit's best and last chances to edge out Japanese technology.

If, for example, Wlosinski's Automotive Composites Consortium fails, so largely will the future of

Senate mulls import tariff on minivans, sport-utilities

MAX GATES
Staff Reporter

WASHINGTON — Washington's focus on import vehicles sharpened last week as the Senate Finance Committee approved a tax bill that would subject imported minivans and four-door sport-utilities to a 25 percent tariff.

The bill also retains the luxury tax on cars that cost over $30,000. But it adds an index provision that would adjust the $30,000 baseline to keep pace with inflation.

The increased minivan tariff has a long way to go before becoming law. But with last week's 11-9 vote, it advanced with the backing of

Redesign for Cadillac DeVille

Major changes are in store for the 1994 version of Cadillac's best-selling line. This prototype, caught undergoing cold weather testing in Canada, shows more rounded body lines, a larger trunk and a longer, more sloping hood line. Tape disguises the skirted rear wheel openings; use of chrome on the exterior is limited primarily to the grille. The powerplant is expected to be a 200-horsepower version of Cadillac's new 4.6-liter Northstar V-8.

in Fraser, Mich., said it has been awarded a $45 million contract to design and engineer a prototype of the next-generation BJ-202 and for related production dies and assembly tooling.

The current vehicle, which Beijing Jeep produces alongside the Jeep Cherokee, is based on a nearly 30-year-old Soviet design. The venture produces about 45,000 of the vehicles a year.

A Visioneering spokesman said the new BJ likely will be based on the long Jeep Wrangler chassis and will offer both a 2.5-liter four-cylinder and a 4.0-liter six-cylinder engine. The price will be less than the equivalent of $12,000, the executive said.

Infiniti prices J30 at $33,000

Infiniti Division of Nissan Motor Corp. in U.S.A. has priced its 1993 J30 four-door sedan at $33,000. The J30t (touring package) is $34,700. The cars go on sale this month.

The J30, a new entry, fits between the G20 sedan at $19,100 and the Q45 sedan at $44,100 in the Infiniti lineup. Other models are the M30 two-door at $25,500 and the M30 convertible at $33,700.

Standard equipment on the J30 includes driver-side and passenger-side airbags, keyless entry system and in-dash compact disc player.

Mercedes taps Niefer successor

FRANKFURT — Mercedes-Benz AG said last week that Chairman Werner Niefer would retire on May 27 after 50 years with the company. Helmut Werner, head of the commercial-vehicles division, was named to succeed him.

Niefer, who also is deputy chief executive of parent-company Daimler-Benz AG, was thought to be heir-in-waiting to Daimler CEO Edzard Reuter. But the company said last week that the 64-year-old Reuter had been asked to stay on past normal retirement age of 65.

Reuter took over Daimler in 1987 and is responsible for launching the company on a major diversification program.

Werner, 55, is the former head of Continental AG, the German tire maker. He joined Mercedes in 1987 to take over the truck operation and is credited with its turnaround.

Separately, Dieter Zetsche, 38, former president of Freightliner Corp., was named head of passenger-car development at Mercedes. He assumes the position on April 1, replacing Wolfgang Peter, who is joining the management board of Mannesmann AG in Dusseldorf.

Ford reaches pact in Mexico

Labor negotiators at Ford Motor Co.'s Escort/Tracer plant in Hermosillo, Mexico, avoided a work stoppage by agreeing on a new two-year contract last Thursday.

The contract had expired at the end of February but production continued as the negotiations were extended. All of the plant's output is shipped to the United States.

No details were available on the new accord. The plant's 2,100 hourly workers still need to ratify it.

Ford in Mexico reached a separate two-year agreement with workers at its Chihuahua engine plant earlier this year. Another contract, covering only wage issues, expires at the end of this month at Ford's manufacturing complex near Mexico City.

Hearings begin on trade bill

WASHINGTON - The House began hearings last week on the Gephardt-Riegle trade bill that would force Japan to reduce its $43 billion a year trade surplus with the United States or face limits on sales of imported and transplant-built vehicles.

The lead witness was the bill's co-author, House Majority Leader Richard Gephardt, D-Mo. He argued that while the bill may not be perfect, Congress needs to act to protect the Big 3 domestic automakers. "We cannot afford to give up on cars," Gephardt told a House Energy and Commerce subcommittee.

The Bush administration came in for its share of criticism as Democrats charged that the president has failed to enforce U.S. trade laws with the Japanese. This bill "would not be needed if the administration was doing its job. The president has never devoted his attention to the unfair practices of Japan," said Rep. John Dingell, D-Mich.

Republicans on the subcommittee labeled the bill "protectionist" and "political grandstanding." Two more hearings are scheduled.

Jaguar shops for new agency

MAHWAH, N.J. — Jaguar Cars Inc. has put its advertising account up for review.

The account is estimated to be worth $15 million to $20 million in annual billings, according to *Advertising Age*, a sister publication to *Automotive News*.

The present agency, Geer Dubois Inc. in New York, will be invited to the review. The agency will continue to handle the account for the rest of the 1992 model year, said Michael Jackling, Jaguar vice president of sales and marketing. Jaguar's U.S. sales are up 18 percent so far this year after dropping 50 percent in 1991.

— Jim Henry

Distributor owes $3 million

North Carolina's motor vehicle commissioner closed the case against Southeast Toyota Distributors Inc. late last week by fining the independent distributor $3 million but allowing it stay in business.

A state hearing found Southeast Toyota guilty last month of obstructing justice during a 1987 investigation and of misallocating cars to Toyota dealers in the state in 1988. Southeast's penalty is a $1 million fine annually for the next three years.

The commissioner's decision rejects a last-minute recommendation by the state's attorney general to throw out the fine and instead revoke the distributor's business license in the state. (See story on Page 23.)

An attorney representing two Toyota dealers who had called for the hearing said an appeal is being considered.

— Lindsay Chappell

briefly

Honda flirts with trucks

Honda teased financial analysts in New York last week with talk about future products, including a minivan and sport-utility that if built would put Honda in the truck business. Fumihiko Ike, an American Honda Motor Co. executive in investor relations, said Honda is also considering a new little Honda that won't be the Beat and a new luxury Acura — a Legend plus — that could be based on the FS-X concept car from the 1991 Tokyo Auto Show. He showed analysts a photo of the Beat convertible mini-car popular in Japan but said neither it nor a derivative would be a new small Honda. "I'm not saying we are going to build these vehicles," he said. "But we are studying them."

MISS THE MOOSE — **Volvo** and **Saab** are testing ultraviolet headlights that could help Alaskans who play miss-the-moose just about every time they drive at night. Still being tested in Europe, the UV lights developed by the automakers reportedly make moose hides glow in the dark up to a mile off. But it could be years before the lights are available in the United States — if ever. There is concern over possible health hazards from the radiation discharged by the bulbs.

SUN STRUCK — Those government-automaker partnerships you've heard so much about have moved to solar cars. The Department of Energy has taken over principal sponsorship of an every-other-year Sunrayce for engineering students at 36 U.S. and Canadian universities. In 1991, **General Motors** sponsored the educational fun, but for Sunrayce '93, GM is a co-sponsor with SAE, the EPA and a few others. Racers will leave Dallas June 20, 1993, aiming to cover in seven days some 1,000 miles of back roads leading to Minneapolis.

SAFE TO SAY — **Saab Cars USA Inc.** is running an ad that says Saab is "one of the few car companies that would welcome a repeat of 1991." Saab sold 26,103 cars in 1991, down only 1 percent. The entire industry was off 12.0 percent, and Swedish rival **Volvo Cars of North America** fell 24.7 percent.

TAKE THIS JOB AND . . . On **General Motors'** "blue Monday" Feb. 24, Girvan White learned he will lose his job when GM closes its St. Catharines, Ontario, foundry in 1995. Four days later, the 53-year-old material handler picked up a check for $935,592.10 (Canadian) — his share of a $1.87 million Lotto jackpot.

CLOSE TO THE VEST — In his first meeting with the press, Transportation Secretary Andrew Card dodged questions about the future of Jerry Curry. The former general invigorated the National Highway Traffic Safety Administration when he took it over in 1989. Last November he was tapped to head the Federal Aviation Administration, a larger agency, but since then he's become embroiled with the second in command at Transportation, James Busey. In private, Curry said he expects the situation to be resolved to his "satisfaction."

Curry: No endorsement

GM officials to meet with UAW

Plant closings cast shadow over committee agenda

PHIL FRAME and LIZ PINTO
Staff Reporters

General Motors and UAW officials meet in Atlanta this week for their first face-to-face, high-level discussions since GM announced it would idle 21 U.S. and Canadian plants and trim 60,000 blue collar jobs by 1995.

The annual meeting of the National GM Jobs Committee will be Thursday at the Hyatt Regency in Atlanta. The committee comprises local union presidents and shop chairs plus GM plant managers and labor relation representatives.

The national committee is co-chaired by Donald Gardner, director of employee relations and job security for GM, and Cal Rapson, administrative assistant to Stephen Yokich, UAW vice president of the GM department.

A major topic of Thursday's meeting relates to procedures for administering the program that allows permanently laid-off UAW workers to move to openings at other plants. But UAW officials said they won't be afraid to use the meeting as a forum to express their rage over GM's cutbacks.

Bob Harlow, president of UAW Local 1776 in Ypsilanti, Mich., will be at the Thursday meeting, ready, willing and anxious to talk about GM's decision to close the Willow Run plant, idling more than 2,000 workers.

"I don't know if it's on the agenda officially, but I'm always prepared to talk about GM's decision to close Willow Run," Harlowe said.

This will be the first meeting of high-level company and union representatives since GM's cuts were announced, said Karen Messenger, financial secretary for UAW Local 664 in North Tarrytown, N.Y., which is one of the plants GM will idle.

Messenger, who is not going to the Atlanta meeting herself, said she also believes GM's cutbacks will be brought up by the UAW representatives.

"I'm sure they will use it that way," Messenger said. "Whether it falls on anyone who's listening is another question."

North Tarrytown is where GM's plastic-bodied minivans (Chevrolet Lumina APV, Oldsmobile Silhouette and Pontiac Trans Sport) are built. GM Chairman Robert Stempel said the plant would close in 1995 and minivan production shifted elsewhere.

Workers there are upset with GM decisions that they feel doomed the plant:

- The North Tarrytown UAW shop committee thought they were in line to build Trans Sports with an Opel badge for eastern Europe, Messenger said. But then GM announced the plant would close and that it would open a plant in Poland to build the vans for Europe.
- GM designed the minivans to have plastic bodies, retooled the plant and removed its metal body shop. The next generation of the vans due in the 1996 model year will have metal bodies, which would have required a big capital investment to restore a metal shop, Messenger said.

Meanwhile, near Atlanta, where the Doraville, Ga., Oldsmobile Cutlass Supreme plant is in jeopardy, UAW Local 10 is busily preparing for the Jobs Committee meeting and a big "Buy American" rally March 14 at Fulton County Stadium.

Russell Cobb, chairman of Local 10 education committee, said he hopes the rally shows GM the area's commitment to domestic manufacturers with the ultimate goal of swaying GM's decision regarding the Doraville plant. Cobb said Jesse Jackson and congressmen Ben Jones and John Lewis have been invited to address the rally.

Four more assembly plants and at least three more component plants will be idled by GM.

Chrysler plans electric minivans for 1993

PHIL FRAME
Staff Reporter

Chrysler's electric-powered TEVan, based on the company's minivans, will be sold to utility company fleets only.

Chrysler Corp. is expected to announce soon that it will build up to 300 electric-powered minivans in 1993 for use in utility-company fleets across the United States.

The first retail units are likely to be built on the next generation of Chrysler minivans due in three years.

Chrysler has suggested that it would produce its so-called TEVan, a joint-venture product with the Electric Power Research Institute, but has not said when or how they would be distributed.

In December, Chrysler applied for exemptions from National Highway Traffic Safety Administration standards that don't apply to electric vehicles, saying it planned a demonstration fleet of up to 300 vehicles. The public comment period for the exemptions expires today. NHTSA allows manufacturers to get exemptions to build up to 2,500 electric vehicles a year.

Chrysler may announce the production and distribution plans for the TEVan next month at the Greater New York International Auto Show, where the company will display its electric EPIC concept minivan that has been at other auto shows this year.

Although Chrysler has not decided whether to disclose TEVan production plans at the New York show, spokesman Jason Vines said it is the next good opportunity for such an announcement.

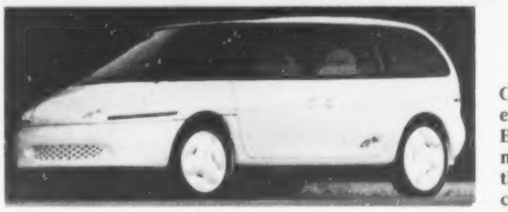
The TEVan, based on the Plymouth Voyager, will not be sold to the public. The vans will be sold to utilities selected with the help of the Electric Power Research Institute, which wants customers who are interested in promoting electric vehicle technology.

"We know who most of the proactive utilities are," said Gary Purcell, manager of the institute's program with Chrysler.

Purcell said he was not aware of an impending announcement.

He said that distribution of the Chrysler vans will not be limited to Southern California and that Chrysler and the institute want a good test of how electric vehicles work in a variety of climates.

The TEVan name is derived from the "T" in the T-115 Voyager engineering code-name and "E" for electric. Chrysler began developing the vehicle last year.



Chrysler's electric-powered EPIC concept minivan is on the auto show circuit this year.

The TEVan will have a direct-current motor that can propel the vehicle from 0 to 60 mph in about 25 seconds. The 1,500-pound battery pack has a range of 120 miles in city driving, Vines said.

The first production vans will not use the electric vehicle technology that Chrysler said it will develop in a multi-million dollar joint venture with Westinghouse Electric Corp (see story below).

Chrysler may be shooting for retail sale of electric versions of its next-generation minivan, which is due in the 1995½ or 1996 model year. Engineers are working on how to package the electric vehicle components more efficiently in a body that also will be used for gasoline-powered versions.

The TEVan will be built at the company's Windsor, Ontario, assembly plant, but may be converted to electricity elsewhere.

Westinghouse electric motor project helps minivan against GM Impact

KRISTINE STIVEN BREESE
Staff Reporter

UNIVERSAL CITY, Calif. — Chrysler Corp. accelerated its electric minivan plans last week, planning to race it in the marketplace against General Motors' electric sports car.

Jean Mallebay-Vacqueur, Chrysler's general manager of special projects engineering, announced an agreement between Chrysler and Westinghouse Electric Corp. to design a more efficient electric motor.

Clearly taking aim at GM, Mallebay-Vacqueur said the goal for the Westinghouse motor would be acceleration from 0 to 60 mph in less than 15 seconds, a range of 200 miles and a top speed of 70 mph. GM's coupe, based on the Impact concept car shown two years ago, goes from 0 to 60 mph in 8 seconds, has a 120-mile range and a top speed of 75 mph.

Although Impact offers better acceleration and top speed, Chrysler's minivan would have better range and carrying capacity.

"The minivan is our base effort because it can carry five people, not two like some of our competitors," Mallebay-Vacqueur said.

Chrysler used the occasion of the motor announcement to offer more details on its plan to sell 100,000 alternative-fuel vehicles nationwide in the 1994 model year.

This summer, dealers in California will begin selling Dodge Spirits and Plymouth Acclaims that run on a combination of methanol and gasoline. The federal government has ordered 2,500 of the cars.

This month, Chrysler will begin selling full-sized vans that run exclusively on compressed natural gas. The first 50 vans will be delivered to a California fleet March 31, and Chrysler said it plans to sell 2,500 of them annually.

While boasting of its progress and goals, Chrysler urged regulators to give the auto industry a "breathing period." And the company asked energy suppliers to prepare infrastructures to make methanol, natural gas and electricity more accessible.

Feb. sales rise 6.6%; Saturn at new peak

JIM HENRY
Staff Reporter

February sales showed strength in spots, particularly the Big 3 bastion of light trucks.

And sales continued to grow for General Motors' Saturn operation, which set another monthly record.

"Saturn is now standing on its own four tires," said Marcy Maguire, the dealer at Saturn of Bordentown (N.J.).

Helped by an extra selling day on Feb. 29, industry sales topped the 1991 figure by 6.6 percent. Nameplates with higher sales than last year outnumbered losers nearly 2 to 1.

The seasonally adjusted annual selling rate for the month was about 12.9 million cars and trucks, a 9.3 percent improvement over January, and the highest SAAR since last October.

"The ninth post-World War II recovery has started with a whimper, rather than a bang," said John Ryding, vice president for Bear Stearns & Co. Inc. He spoke at an auto industry seminar in New York last week shortly before the February figures were released.

Toyota Motor Sales U.S.A. Inc. had its best February ever. Its Lexus Division almost doubled year-ago sales.

Customers "are actually pulling out their checkbooks and spending some money," said Greg Penske, general manager of Longo Toyota and Longo Lexus in El Monte, Calif., the top-selling dealerships for both brands.

Light trucks helped the Big 3 show a 7.5 percent increase.

Robert L. Rewey, Ford's vice president of sales operations for North America, said Ford has purposely cut back on its sales to rental fleets, which disguises an increase in demand among individual consumers. A year ago, during the Persian Gulf war, fleet sales were about the only action.

"The truck market, unaffected by the transition under way in the rental business, is providing a clearer picture of the revival in demand," Rewey said.

Saturn had its best month ever, with sales of 13,035 cars..That was 27.7 percent above January, the previous high. Sales-per-outlet were around 95 for the month, keeping Saturn at the top of that list.

Like some other Saturn dealers, Maguire is preparing to open second and third dealerships, by June in her case.

Saturn began February with 137 dealerships and finished with 144. The company plans to add another 10 to 15 through March and April, said Donald W. Hudler, Saturn vice president, sales service and marketing.

As Saturn adds dealerships, the company is boosting production at its Spring Hill, Tenn., plant.

Hudler said Saturn built about 16,000 cars in February, including about 1,000 that were shipped to Canada.

He said February sales left Saturn with a slim 35- to 36-day supply of cars.

Staff Reporter Phil Frame contributed to this report.

FEBRUARY RUNDOWN > 38, 39

Mexico's Big Five positioned for more growth

DAVID VERSICAL
National Editor

MONTERREY, Mexico — That rising juggernaut to the south — the Mexican auto industry — continued its course in 1991.

Industry sales increased more than 15 percent for the fourth straight year. The "Big Five" automakers — Ford, Chrysler, Nissan, Volkswagen and General Motors — helped top a decade-old sales record by selling 614,823 cars and trucks. Each of them gained sales. Each increased production.

Together, they produced 960,883 vehicles last year. More than one third of those — 341,826 — were exported, principally to the United States and Canada. Smaller truckmakers built an additional 28,490 trucks, truck tractors and buses, bringing the total industry just 10,000 units shy of 1 million.

The year also dramatized another development: parity. In 1990, more than 23,000 sales separated fifth-place Ford from second-place Nissan. In 1991, when the U.S. Big 3's Mexican arms each increased sales by more than 20 percent, only 1,450 units separated Nissan from GM at the back of the pack. But the tightness of the race made the rankings almost meaningless: GM had 113,025 sales; Ford, 113,279; Chrysler, 113,433; and Nissan, 114,475.

VW, meanwhile, stayed well ahead of the rest. Its sales jumped 10.7 percent, to 160,611. More than half of those were for the Beetle — which is an oddity for more than its 50-year-old styling. It sells for the equivalent of about $6,700 in Mexico and competes for sales against used cars.

Beetle demand still rising > 34

Sales of imported cars in Mexico also climbed last year, but not as much as had been projected. The government's ban on imported cars was lifted in 1990, and as many as 15,000 had been expected to arrive in 1991.

Although the import volume did rise significantly, to 9,371 units, imports were kept in check by rules that require automakers to earn credits for importing by exporting Mexican-made parts and vehicles.

In addition to the Big Five, six other companies make trucks, tractor-trailers and buses in Mexico. Their performance was even stronger, up 68.8 percent last year.

Here are status reports on Mexico's five carmakers, based on 1991 sales statistics from the Mexican Automotive Industry Association and interviews with executives attending Mexico's annual dealer convention held in Monterrey Feb. 28-29.

Volkswagen

On the sales charts, Volkswagen de Mexico walloped the competition in 1991.

Its 160,611 car and truck sales were 46,136 more than second-place Nissan. But more than half (86,353) were Beetles, whose $6,700 sticker makes it by far the least expensive car on the market. Volkswagen's competitors question whether it makes any money. "It's not our most profitable car, but I also would not say we are losing money," says Martin Josephi, president of Volkswagen de Mexico.

VW's car sales kept pace with the car market last year. The company's three mainstream entries — the Beetle, Golf and Jetta — allow VW to dominate Mexico's popular car segment. In 1992, Josephi says, the company is planning a 15 percent increase in production with the addition of the resigned Golf and Jetta in May.

Josephi: Beetle bolstered

The company's weakness is trucks: VW sold 11,965 units in Mexico last year; Nissan, its closest competitor, sold three times as many. "We have not given up our hopes" of adding additional truck entries, says Josephi. But the parent company is in Europe, where trucks don't get the attention that they do in other markets, he says.

Although Mexico is the North American production base for Golf and Jetta models sold in the United States, VW built just 54,667 export units last year. Only Nissan exported fewer vehicles. Volkswagen's Mexican trade balance also limited the number of imported cars it could sell to 60, all of them Passat sedans and wagons.

Nissan

Nissan Mexicana's 1.5 percent sales increase was the smallest among Mexican carmakers last year, but its 114,475 sales were enough to set a record, says Seiroku Ochi, sub-director for commercial sales. Its product line is Mexico's narrowest: the Tsuru (Sentra) subcompact, pickups and a passenger van.

The company also is unusual because it is the only one of Mexico's Big Five that does not export to the United States, although Nissan Mexicana does produce the old Sentra exclusively for Canada. Despite those units and vehicles shipped to other Latin American countries, Nissan is the lowest-volume exporter among the five producers.

Ochi: limited by capacity

For now, capacity is a problem. "We could have sold 20,000 more if we had sufficient capacity," says Ochi. A new plant in Aguascalientes is slated to open late this year and eventually will provide 100,000 units annually. The plant will produce a version of Japan's AD wagon, primarily for export to Japan and Latin America.

More plants, says Ochi, depend on the future of free-trade talks with the United States. And expansion of Nissan's product line hinges on continued growth in the Mexican market.

While known in Mexico for reliable, fuel-efficient family transportation, Nissan has jazzed up its line with two imports, the 300ZX and Maxima. Last year, the company sold as many of the two cars as Mexico's import rules would allow: 1,667.

General Motors

General Motors' fortunes are mixed in Mexico. Its 67,820 truck sales during the 1991 calendar year led the Mexican market by a wide margin.

But the company sold 40,455 cars, fewer than anyone else. And even though it finished last in total sales among Mexico's Big Five, GM's 1991 volume jumped 20.8 percent, compared with the previous year. Only 1,450 sales separated GM from second-place Nissan.

"1991 was a really good year for the industry and a really good year for us," says Robert Hendry, the company's president.

Hendry took the job last September while the company was enroute to a 41.5 percent jump in production, compared with the previous year. Hendry says the company sold out its 1991 model year production and is exploring ways to boost capacity from its two assembly plants. A third shift is one possibility.

Hendry: a great 1991

Last year, GM's car plant in Ramos Arizpe sent 40,000 Buick Century vehicles to the United States and 46,000 Chevrolet Cavaliers to Canada. The other plant, in Mexico City, builds S-10 and Suburban trucks, which are sold only in Mexico.

GM doesn't compete in Mexico's biggest car segment — popular cars. But the Cavalier, with 18,419 units, and Cutlass, 17,927 units, made gains in the compact class. The Century (4,108 units) was the best-seller in the luxury group.

GM's Mexican trade balance also allowed the company to import more vehicles than any of its competitors. The Cadillac DeVille, Chevrolet Corvette, Oldsmobile Eighty Eight and Silhouette generated 4,750 sales, more than twice as many as any other company.

Ford

Ford surpassed VW to become the Mexican industry's biggest producer last year. Car and truck output increased 30.5 percent, to 222,523 units. About half were Escorts and Tracers built in Hermosillo and sold in the United States.

Ford also posted the industry's largest gain in Mexican sales. Overall volume rose 26.6 percent, largely on the strength of trucks. With that increase, Ford joined GM as the only Mexican carmakers to sell more trucks than cars in Mexico last year.

Last year's strong gains, however, were compared to a weak 1990, when both of Ford's assembly plants were closed early in the year for changeover or labor problems.

Barreiro: luxury leader

The company leads the Mexican market's luxury segment, where it sells the Cougar and Grand Marquis. Managing Director Victor Barreiro reports a four-month waiting list for the Grand Marquis, which replaced the Taurus (U.S. Sable) last fall. The Thunderbird is the industry's only entry in the sport segment.

Those models as well as the Topaz (U.S. Tempo) and Ghia (a V-6 Tempo) are all built at Ford's plant in Cuautitlan, near Mexico City. Barreiro calls the complex, which produces trucks on one line and cars on two others, "the most complex assembly plant in the Ford world."

The high percentage of U.S. and Canadian content on the Escort and Tracer means they generate few import credits for Ford when they are sent to the United States. Ford of Mexico's 1991 imports were limited to 1,700 Lincoln Town Cars and Ford Aerostars and Explorers.

Ford's engine plant in Chihuahua has been closed for retooling. It will resume production in 1993 when it begins building Ford's new four-cylinder Zeta engine.

Chrysler

Chrysler's strategy for Mexico is simple, says Jose de la Pena, the firm's executive director for sales and marketing: Use the Shadow, which starts at the equivalent of about $12,300, to attract first-time buyers. And then build from there into more profitable segments of the market.

Sales of the Shadow and a bigger Chrysler compact, the Spirit, totaled 57,219 last year. Together, they led Chrysler to the top of Mexico's "compact" segment. Chrysler also sold 7,428 LeBaron sedans, New Yorkers and Phantoms (LeBaron coupe) to take nearly a third of the "luxury" class.

Overall Chrysler sales rose 23.4 percent last year, to 113,433. The Spirit was Chrysler's best-selling car (31,532); the Ramcharger (14,309) was its hottest truck.

Chrysler gained on the competition, says de la Pena, when it started 1992-model-year sales with a minimal price increase in midsummer, about six weeks ahead of the competition.

Chrysler de Mexico also makes the LeBaron sedan, Shadow convertible, Spirit, Acclaim, Ram Club Cab and Ramcharger for the United States. Export production rose 7.5 percent last year to 81,919 units, nearly all of it bound for the United States.

de la Pena: building

On the import end, Chrysler brings in the Imperial, Wrangler and Voyager. Sales nearly doubled in 1991, to 1,194 units.

Falling interest rates, a growing economy and a rising vehicle population will help keep the market strong, says de la Pena.

He predicts "moderate" growth for 1992. ■

INSIGHTS

CHINESE BUY U.S. TEST GEAR: The Shanghai Automotive Research Institute has ordered $3.1 million in fatigue and durability test systems and consulting from MTS Systems Corp. of Eden Prairie, Minn. The institute in China is building a research laboratory in Shanghai. Sale includes a road simulation system and a multi-axle durability simulation system.

MERCEDES MIRRORS U.S.: Gentex Corp. of Zeeland, Mich., maker of high-tech automatic dimming mirrors, said it has a $4.2 million in additional orders from Reitter and Schenfenacker GmbH & Co. of Esslingen, Germany. The order covers elements and subassemblies that will be used in advanced-feature mirror on several Mercedes models.

U.S. ROBOTS GOING ABROAD: ISI Robotics Inc. of Fraser, Mich., has been named supplier of stamping automation equipment to General Motors' Vauxhall plant in Ellesmere Port, England, and Steyr Nutzfahrzeuge AG's plant in Steyr, Austria. Together, the orders amount to about $2 million. GM's equipment will be used in building the new Astra car and Steyr will use its in producing mid-sized trucks.

MEXICO LURES PART MARKERS: There are about 500 auto parts manufacturers in Mexico and that number is expected to grow substantially in the years ahead, says the Mexico Investment Board. Most Japanese operations are maquiladoras, companies looking ahead to free trade and the need to expand in the country on a large scale. A study funded by the board found Japanese investors the most cautious. But the study shows more manufacturers believe production in Mexico is a key to global competitiveness.

ROBOTS HEAD FOR KOREA: Apollo Industrial Co. Ltd. of Kyongju, Korea, supplier of plastic bumpers to Hyundai Motor Co. in Seoul, is buying 21 painting robots in a $4.75 million-order from ABB Graco Robotics Inc. of Plymouth, Mich. ABB Graco is part of Asea Brown Boveri of Stockholm, Sweden.

NISSAN GOES SHOPPING: Nissan has placed its first order for aluminum wheels, including design responsibility for wheel development. Value of the order totals $12 million, with shipments to begin in spring 1993. The new wheels will be made in La Mirada, Calif., for vehicles built in Japan. Nissan Motor Co. Ltd. said the agreement with Kelsey-Hayes Group of Romulus, Mich., is the first since Nissan President Yutaka Kume announced plans to increase the company's parts procurement goal from North American suppliers. "Kelsey-Hayes provides a good example of qualified American suppliers," says Januchi Hashiuhi, director of purchasing strategy at Nissan.

MORE NISSAN BUYS: Nissan is also buying $4 million of machine tools from Ingersoll Milling Machine Co. of Rockford, Ill. The purchase is of transfer lines to be used in a new plant in Iwaki City, Japan, to machine bearing caps for a new Nissan six-cylinder engine going into post-1994 models. Nissan said the decision to buy machine tools from Ingersoll was influenced by the positive experience Nissan has had using U.S.-made machine tools at its Smyrna, Tenn., plant.

LONG HAUL TIRE: Bridgestone/Firestone Inc. of Nashville, Tenn., is adding an S speed-rated tire to its Turanza tire line. Carrying an 80,000-mile tread wear warranty, the tire is designed for U.S. sedans such as the Cadillac Seville, Ford Crown Victoria, Pontiac Bonneville and Chrysler LeBaron. The tiremaker said that in the past tires built for long tread life could not provide the comfort, quiet and all-season performance buyers of those types of cars demand.

FRENCH LICK TIRE RECYCLING PROBLEMS: A French company says it has developed a process for recycling tires into a purified rubber powder. The company says the powder has uses ranging from school playground and noise-free road surfaces to toy wheels and shoe heels. Comptoir Industriel des Metaux et Plastiques' recycling method uses only mechanical procedures to shred and separate the tires. Little power is required, the method is pollution free and two men can process about two metric tons of tires an hour, said the company, based in Crepy-en-Valois. Huge scissor-like cutters reduce the tires to smaller and smaller pieces and magnets remove metallic materials.

NON-STOP BRAKE EXPANSION: Kelsey-Hayes Group is going to manufacture and sell its car and light-truck Electronic Brake Control 10 (EBC 10) globally. The Romulus, Mich., firm said its new four-wheel system is 50 percen lighter, significantly smaller and more cost-effective than others. EBC 10 had its U.S. introduction at last month's SAE Conference and Exposition in Detroit. Kelsey-Hayes recently opened a sales and engineering office in Frankfurt, Germany, and is investigating European partnerships and joint ventures. In Japan, Kelsey-Hayes is expanding its Tokyo sales and engineering office and is in the final stages of a year-long joint-venture discussion with a Japanese manufacturer.

French-built tire shredder can process up to two metric tons of old tires per hour.

Niche du jour

Japanese entrees focus attention on the near-luxury segment

By: Kristine Stiven Breese

Last July, automotive industry research giant J.D. Power and Associates added a new category to its literature, product analysis and rankings: the near-luxury segment.

It's not that the niche, sandwiched between high-end mass-market cars and low-volume luxury cars, didn't exist before. But it wasn't until the Japanese moved into it that the industry really took notice.

As defined by Power, the segment now includes 16 different models — six Japanese, six European and four domestic nameplates. Last year it grew 4.0 percent to 350,817 units.

After a slow start, the Japanese importers are now considered the segment pace setters with the introduction of five such products in the last 18 months.

Two Infinitis (the M30 and the G20), the Lexus ES300, the Acura Vigor, the Mitsubishi Diamante and the Mazda 929 are the best known players in the segment, and the reason it exists.

"When Mitsubishi launched the Diamante last May, it became necessary to find another word for these cars, which are luxurious but not exactly 'luxury,' " says Todd Turner, an editor in J.D. Power's publications division.

Even though most agree with Turner that the segment now exists as a separate entity, there is less agreement on how to define it. Even Turner admits the parameters are somewhat fluid.

"They cost between $20,000 and $30,000 — usually," he explains. "Their engines are 2.5 liters to 3.5 liters — most of the time. They're usually six-cylinders — but not always. They're larger than the mid-sized cars, with about a 105-inch wheelbase.

"Although the Honda Accord is bigger than that, it's not near-luxury," adds Turner. "And the G20, which is considered near-luxury, has a wheelbase that's only 100.4 inches."

Turner says that when Infiniti introduces its new J30 sedan this spring, Power will bump the G20 down to an "upper middle sedan" segment.

"Obviously, the definition is not set in granite," he says.

Early rumblings by the Japanese in the segment began in late 1989 when Toyota Motor Sales U.S.A. Inc. and Nissan Motor Corp. in U.S.A. launched their Lexus and Infiniti divisions. Each brought two products to market, a V-8 flagship sedan and six-cylinder entry-level car. The flagships were priced in the $40,000 range, the entry-level models around $25,000.

In both cases, the launches pivoted on the success of the top-of-the-line model. And that's where the companies spent most of their energies.

Indeed, both entry level cars, the Lexus ES250 and Infiniti M30, were remakes of other cars in the automakers' Japanese market lineups, and came across as little more than after-thoughts to most of the automotive press.

IMPORTED CAR SALES — 1991 CALENDAR YEAR

*Estimate

Even so, everyone needed a term to describe the cars. They weren't quite luxurious, at least not when compared to their high-end siblings. But they weren't mid-level, mass-market vehicles either.

Slowly, sporadically, the word "near" began to appear before the word "luxury" when the cars were described.

Susan Jacobs, president of Jacobs Automotive Inc., a research firm in Little Falls, N.J., says that while the Japanese get the credit, they did not actually create the segment. She says the Europeans founded it, but nobody called it that at the time.

"What first drew the attention of the Japanese to the segment was the success BMW had with the 3 series in the 1980s," she says. "They wanted to get in on the action."

Jacobs notes that American Honda Motor Co.'s Acura Division was the first Japanese company to jump in, but the momentum has been captured by Lexus and Infiniti.

Jacobs says that there are two ways to look at near-luxury: top-end Toyotas, Mitsubishis, Mazdas and Oldsmobiles, for example, "that don't have a luxury badge associated with them"; and cars at the low end of the luxury market "which are under $30,000" but have a luxury badge.

She says the second definition is the most viable one for the future, for two reasons.

Most importantly, a separate luxury division gives the company an ability to start from scratch and build an entire corporate culture around a new luxury philosophy. In that scenario, the product is almost secondary to the image and service of the brand in drawing customers.

Second, Jacobs says, simply topping off an existing line with a new high-end product will only bring in one-time buyers. Someone who buys a Mitsubishi Diamante, for example, may love the car, but when ready to buy another car, the buyer has nothing to move up into.

Mazda Motor of America hopes to play on both sides of the near-luxury game. Its new 929 is the first luxury class car the company has ever sold. And just when some of the current 929 buyers are ready to trade up, Mazda's Amati luxury channel will be open for business.

"The near-luxury segment, especially products that have a luxury nameplate, will grow because it can expand from both ends," Jacobs says. "Consumers will stretch to get into a luxury nameplate, even the low end, because of the image and service. And when the economy is weak, people who had aspired to buy the top-of-the-line car may find they have to lower their sights a bit, but they can still stay with the nameplate."

Lexus General Manager J. Davis Illingworth calls the near-luxury segment "crucial" to Lexus' future because it gives people entree into the rarefied world of luxury car buying.

Illingworth defines near-luxury as the $25,000 to $35,000 price range. While he doesn't feel the economy will keep too many interested buyers out of the LS400, he does think some people are waiting "and buying just one more car" before they upgrade to a high-end V-8 sedan. ☐

Turnabout Is Fair Play

Saturn puts the import shoe on the other foot

By: Lindsay Chappell

Don Hudler sounds gleeful these days.

Word is filtering up to the Saturn Corp. vice president of sales, service and marketing that his import competitors are getting itchy about the young upstart U.S. small-car line. Some Saturn dealers say they have been approached by representatives from Japanese import lines that they also handle, wanting to know more about Saturn.

Hudler

"Our Japanese competitors are starting to look at us," Hudler says. "They're asking our dealers, 'How are they really doing this? How are they pulling it off?' We tell them. The response has been: 'Gee, we're doing those things.'

"They seem to be looking for some magic formula," Hudler adds. "It's no more complicated than picking the right people, building the right product, pricing it right, treating customers right, and it works. But it's so simple, people look right past it."

Hudler's words seem to flow from a text of speeches given throughout the 1980s by executives from American Honda Motor Co., Toyota Motor Sales U.S.A. Inc. and Nissan Motor Corp. in U.S.A.

Japanese importers have smoothly lectured the American industry for a decade on the wisdom of doing things simply and well. Taking copious notes in those days were people like Hudler and the team which would launch Saturn, "the import fighter," in 1990.

Now, to hear Saturn's sales boss tell it, the shoe is on the other foot.

As of February, according to company surveys, 53 percent of Saturn's national sales were coming from import buyers. More than 70 percent were coming from outside of parent company General Motors. Hudler says the company expects that share to increase by about 5 percentage points a year.

In California, the all-important market where import sales rule the roost, Saturn sold 8,127 units in 1991. About 65 percent of its sales there were plucked away from the Asian imports.

In January, Saturn supplanted Lexus as the nation's highest sales-per-dealer car line, with average sales of 83 cars a month. That had been a position long dominated by arch-rival Honda. Saturn also passed Honda and Toyota to claim the industry's No. 2 spot on the J.D. Power and Associates Dealer Satisfaction Survey.

In a small-car market segment that the Big 3 had once about given up on for lack of profit potential, Saturn has emerged as the industry's third most profitable car line, according to J.D. Power calculations. The top two are luxury imports Lexus and Infiniti.

It may be worth asking again that stray question from import land: How is Saturn doing it?

The answer: Simply by copying the imports. Starting a decade ago, Saturn set out to identify and reach out to the typical import buyer. The $3 billion startup "literally adopted the Honda-Toyota-Nissan owner base" as its own, according to Hudler.

Through consumer studies, Saturn asked what import-buyers wanted in a product, from design to engine power. Saturn planners studied the sales transaction to see how potential buyers wanted to shop and buy. That led them to a simplified pricing policy, with costs laid out in writing, no haggling and no confusing factory incentives.

They questioned preferences in retail store design, discovering that buyers preferred open and bright shopping environments. They considered the import buyer's personality and how he views himself — a question that flavored the advertising blitz that cost the carmaker more than $59 million in its first full year.

"I acknowledge that these are easier things for a new company with no existing customer base to do than for an existing company," Hudler says. "We've ended up with an owner base that actually mirrors the Honda-Toyota-Nissan base, which is exactly what we set out to do. It's been almost scary how well it's worked."

Consider one consumer family: Tom and Ibba Surface in Nashville, Tenn. The two 30ish professionals have two kids under 8. Tom works in management for a telecommunications firm and Ibba is a structural engineer. Last summer, after years of relying on a Volvo station wagon as the family car and a variety of used cars for their second car, the couple bought a new Saturn SL.

"It had to have four doors, have room for five passengers and be cheap," Tom Surface says. "We also wanted to 'Buy American.' "

Their shopping stopped after they strolled into a Saturn dealership.

"It was a different kind of sales experience," Surface says, souding remarkably like Saturn's "different kind of company" TV ad line. "Salesmen didn't latch onto us. They quoted us a price of $9,500 that was firm, and we thought was their honest price. Somewhere else, we could have gone through the tedium of haggling with a salesman to get it down to $9,500, but then we would have always wondered whether the next guy got it for less."

Apparently, the transaction converted them. Two months later, when Ibba was blindsided at an intersection and the new car was totaled — she walked away uninjured — they went back for their second new Saturn SL. Surface says he happily paid another $900 attributed to insurance deductible, depreciation and a $200 new-model price increase.

The couple comes close to Hudler's description of Saturn's typical import buyer.

"Import buyers are typically younger than most domestic buyers," he says. "They're more knowledgeable about cars, better educated with higher incomes. Their values in a product are really driven by the price-value relationship. They want more functionality. They want a practical car, and one that's reliable."

If that somehow makes import buyers — and more specifically, Saturn buyers — different from the rest, the opportunity isn't lost on the Spring Hill, Tenn., manufacturer. Saturn is pushing its "A different kind of car, a different kind of company" advertising line hard. With ads that feature usually young, slightly free-spirited individual buyers, the company is seemingly attempting to create an alternative lifestyle kind of car line. Hudler acknowledges the direction.

That same spirit of independence, or desire to be different, may have helped start the import avalanche in the first place 20 years ago. Its appeal today seems to be striking a new chord among buyers, especially in Saturn's California markets.

"There are people in California who are in their mid-40s whose kids are growing up in a family that has never owned a domestic car," Hudler says. "The people out there aren't particularly into Japan bashing. Asian imports caught on there initially because of their fuel-economy advantage, then because of quality. If we can succeed in an environment like that, it will be a barometer for how well we do in the rest of the country."

If California is Saturn's most important trial, its second most critical region is a corridor stretching from Richmond, Va., up through New England. The company doesn't talk about it as much, but the mid-Atlantic-Northeast region also has a high saturation of import loyalty that Saturn wants to tap.

That will mean building more name recognition. Despite the hoopla that has surrounded the mammoth venture in automotive circles, the Saturn name is still an unfamiliar one to most of the general car-buying public.

Meanwhile, the company is pushing for more retail stores. There were 138 Saturn stores as of February. Plans call for 260 by year-end. Dealers have also been asked to step up plans to open second and third stores within their exclusive market areas.

"The pack we're running with is running at a sprint," he says of the import competition. "They're improving too. And it's tough to keep pace."

Since Saturn made its debut in October 1990, Honda introduced a new Accord wagon and new Civic. Toyota introduced a new Camry and will introduce a new Corolla next fall. Nissan will introduce a remodeled Stanza this year.

Hudler believes a general trend toward larger cars among the importers may spell increased opportunity for Saturn. "There will remain a basic desire for transportation in our size of products. As others move up in size, it leaves more room for us in that category.

"Our job was to go after the imports," he says. "They may be moving, but we'll never take our eyes off of them." ☐

PROFILE

A Star Is Born?

Mitsubishi's Richard Recchia finds himself center stage in the import debate

By: Kristine Stiven Breese

Maybe Richard Recchia is comfortable talking about imports because he comes from a family of them.

The Mitsubishi Motor Sales of America Inc. executive vice president is a first-generation Italian American who grew up in Detroit.

Recchia said growing up in the city and "coming from an immigrant family" taught him core values about fair play and hard work.

It is those values, as much as his 20 years in the auto industry, that have spurred him to speak out aggressively on fair trade and competitiveness, turning him into the unofficial spokesman for the import industry.

Recchia, 52, appeared recently on "60 Minutes" and before large industry audiences at the Automotive News World Congress and National Automobile Dealers Association convention. He used each opportunity to defend the Japanese from claims that they are to blame for the Big 3's market malaise.

During his NADA speech, Recchia criticized the "latent racial prejudice" that has emerged in the auto industry recently. He also said that the Japanese should not be blamed for "every problem in the U.S. economy . . . or rising unemployment in the U.S. auto industry."

Discussing his background in a recent interview, Recchia said his immigrant roots taught him that America should mean opportunity and equality for everybody.

"My dad and the people in our neighborhood were laborers, not big executives. We knew that this was a land of opportunity and that the harder you work, the more successful you're going to be," he said. "Everybody has the same shot. That's what we were taught from the beginning."

Even as his industry stature rises, Recchia is called by some an unlikely choice for the job of import spokesman. He runs one of the so-called second-tier import companies; Mitsubishi was the fifth-largest Japanese importer in 1991, selling 152,811 units fewer than fourth-place Mazda.

Richard Recchia credits growing up in an immigant family for his values of fair play and hard work.

And Recchia's affable and laid-back style seems more effective one-on-one and in small groups than at a podium in an auditorium. His persona is more favorite uncle than blood and thunder activist.

"Actually," he says, "a lot of this notoriety is accidental. I agreed to speak at these events months ago, and who knew then what the political situation would be now? It just all came together."

But Recchia admits that he could have tackled far less sensitive matters than the trade debate in his speeches. But he says he had no choice.

"We don't have anybody in the import industry that has the charisma or the draw of Iacocca, Stempel or Poling," he points out. "So it was imperative, when there was the opportunity to speak on an almost national scale, to use it to speak out on something I feel strongly about, as do our dealers and all people in the import industry."

Although Recchia said he didn't go after his industry spokesman role, he has been pushing NADA for years to have an import executive as keynote speaker at the annual meeting. Recchia became the first one this year.

Recchia started his automotive career in 1963 with Chrysler Corp. He worked there for 15 years, rising to general sales manager of the Automotive Sales Group.

While at Chrysler, Recchia worked with most of the executives who now run the distribution and marketing arms of the Asian importers.

Those he worked with include: Robert McCurry, Toyota Motor Sales U.S.A. Inc. executive vice president for sales and operations; Al Wagner, Toyota's group vice president of sales; Clark Vitulli, senior vice president and chief operating officer at Mazda Motor of America Inc.; George McCabe, Mazda Division group vice president and general manager; and Rod Hayden, executive vice president and chief operating officer, Hyundai Motor America.

Recchia left Chrysler in 1978 to become president of Fiat Motors of North America, importer and distributor of Fiats and Ferraris.

In the fall of 1980, Recchia packed his bags for California to take a job as consultant for Mitsubishi Motors Corp. when they were exploring an independent move into the U.S. market. Prior to that, Mitsubishi had merely been supplying cars to Chrysler.

Recchia said it was harder to make the transition from Chrysler to Fiat than from Fiat to Mitsubishi.

"There's a huge difference between working for an import company and working for one of the Big 3," he said. "In that respect, going from working with the Italians to the Japanese wasn't that big of a shock.

"I think one of the big problems in the domestic industry, that is leading to their tunnel vision, is that most of their executives don't have experience working at an import company and seeing what it takes to sell products in another country. When you interact with another ethnic group, you learn how they see this market, and you in turn see this market more clearly."

Recchia said he and "the old guys from Chrysler" who are now based in Southern California with Asian importers talk often but don't see each other except for industry events and bumping into each other on the golf course.

While Recchia likes golf, he says he would much rather mix business and pleasure by standing thigh-deep in a creek fly-fishing. He calls himself "an absolutely bona fide nut about fly-fishing," and says he would love to own a fly-fishing store or "fish my way across the country" after he leaves the auto business.

Although Recchia says he doesn't think much about life after Mitsubishi, he admits he would love to teach some day and has aspirations as an author.

"I'd love to write two books," he says. "One would be fiction. The other would be about marketing. There are a lot of business books out there, but I see a need for a book about marketing in America with an international flavor. I believe that's the future of marketing in this country." ☐

Imported car sales tumble 14.2% in 1991

By: Karen Detkowski

Imported car sales in the United States fell 14.2 percent in the 1991 calendar year. A total of 2,103,762 units were sold, representing the lowest sales tally for importers since 1977 when 2,071,100 cars were delivered.

Japanese car sales in the United States fell 13.2 percent from 1990 despite increases from a handful of makers and several new model introductions.

Increases in Japan makes were reported at Acura, 3.8 percent; Infiniti, 45.6 percent; Isuzu, 127.9 percent; Lexus, 12.1 percent; Chrysler's captive-import Dodge/Plymouth Vista, 82.3 percent; and a considerable increase in captive-import Dodge Stealth, which was introduced in October 1990.

European sales in the United States declined 19.4 percent from 1990, when sales were up for the first time since 1987.

The increase in 1990 was punctuated by a late-year rush as buyers moved to avoid a 10 percent luxury tax on the purchase price above $30,000 that became effective on Jan. 1, 1991.

Sterling Motor Cars and Peugeot Motors of America Inc. withdrew from the U.S. market in August 1991.

The only increase in European nameplates for 1991 came from Ford-Mercury captive-imports, 47.4 percent.

Korean makers, comprised of Hyundai, Ford captive-import Festiva and General Motors' Pontiac LeMans, reported a sales decrease of 15.1 percent.

Of the import total, Japanese makers took 71.0 percent of sales, 19.3 percent belonged to European makers, Korean makers held 9.2 percent, and captive imports possessed 14.3 percent.

Imported car sales divided by size classification shows subcompacts as the largest segment with 39.4 percent of the market.

Intermediate models totaled 21.8 percent; compacts, 12.4 percent; luxury models, 11.4 percent; near-luxury cars, 7.3 percent; specialty cars, 6.6 percent; and standard models, 1.1 percent.

The five top selling imported cars, in order, were the Toyota Tercel, Nissan Maxima, Geo Storm, Honda Accord and Honda Civic/CRX.

New models introduced in the 1991 calendar year included the Acura Vigor, Hyundai Elantra, Mazda MX-3, Mitsubishi Expo and Expo LRV, Subaru SVX and Toyota Paseo. ☐

Japan may cut import limit, but impact would be minimal

By: Roger Rowand

The Japanese auto industry's fiscal year closes at the end of April, and attention is beginning to focus on Japan's annual voluntary restraints.

It is expected the Japanese Ministry of International Trade and Industry will announce a reduction of 600,000 to 700,000 cars to a maximum of 1.6 million or 1.7 million from the current car limit of 2.3 million.

It is not expected that Daihatsu Motor Co.'s plan to stop sending vehicles to this country will have any appreciable impact on import levels. In 1991, only 6,202 Daihatsu cars were sold here, down 41.6 percent from a year before.

The restraints are structured to expire as the financial year dies but have survived in one form or another since 1981.

With protectionist sentiment strengthening in the United States in a presidential election year, the restraints probably will be renewed with reductions in the number of cars that makers are permitted to send to the United States. That may be an exercise in politics, however, because imports haven't been close to voluntary restraint agreement limits for years.

The first automotive voluntary restraint agreement with a cap of 1.68 million cars was reached between the U.S. and Japanese governments in April 1981 and was to expire after three years. Extensions and boosts to 1.85 million cars and, in 1986, to 2.3 million cars followed.

Under the voluntary restraint agreements, companies were allotted import limits based on previous sales. The allotments for new entries were negotiated in Japan among vehicle makers and the government's Ministry of International Trade and Industry.

Government-mandated voluntary restraint agreements ended in 1986 when they were succeeded by corporate agreements.

Voluntary restraint agreements have been unheeded in recent years because of the transplant factories here. But because of them, many Japanese believe Japanese companies gained respect in this country. Also, voluntary restraint agreements are credited with turning the United States into a seller's market for Japanese vehicle retailers.

Japan depends upon manufacturing and industry for its existence, and the lifeblood of that industry is export.

The island nation's first automotive exports left the docks in 1951 when Isuzu shipped buses to Thailand. For years exports consisted mainly of trucks going to developing countries.

It wasn't until a substantial home market for cars had been created that auto exports became significant.

In 1965 exports topped 100,000 for the first time.

The first shipments from major auto makers landed in the United States in the late 1950s. In 1966, Toyota, the leader, imported 500 Crown M series cars.

There was little friction between the two nations until the 1973 oil embargo, when popularity of economical Japanese cars skyrocketed. □

E&G IS READY TO TAKE ON AN IMPORT-ant JOB.

As the aftermarket industry's restyling leader, our classic stylings and product innovations have helped the domestic car dealers of America reap top profits and build great CSIs. Now, we could just sit back and enjoy life but we think we still have more IMPORT-ant things to do.

For the last twenty years, E&G has been helping America's car dealers build their bottom lines, and we can stimulate your import car sales today.

For more information about our full line of products for imported cars and our unbeatable Dealer's Advantage™ high profits, call us direct, toll-free, 1-800-394-2774 today.

IRS

Service-pact ruling threatens dealers

continued from PAGE 1

contrary to the IRS advisory.

In 1989, Ford reversed gears by by becoming the obligor on the contracts, making its dealers agents again. Ford also told dealers it will pay the interest on any back taxes owed resulting from an audit on the Ford program.

In late February, NADA notified dealers of the audits and said the IRS' position is wrong. Ironically, the government doesn't gain additional revenues from the accounting change; it does receive the revenues sooner.

NADA, Ford and Robertson, who is acting on behalf of Western National Warranty Corp. and Western Diversified Services, have steadfastly opposed the IRS' interpretation of the rule.

The IRS has audited hundreds of dealers during the past two years. Most of them are appealing their tax assessments.

But an IRS advisory in January may put the issue to rest.

After nearly two years and more than $100,000 in expenses, NADA asked the revenue service to decide a test case — William Reineke Sr., an Ohio Ford dealer and NADA director who was audited.

NADA asked the IRS to reverse its position. The association asserted that Reineke was merely an agent selling the program and that the IRS method of accounting for income from extended warranties results in a mismatch of income and expenses for tax purposes.

In January, the IRS responded that dealers were "primarily obligated" on the Ford contract from 1985 to 1989 and the money sent to Ford is prepaid insurance. The IRS did not waver from its original interpretation.

Reineke declined to say how much the dealership owes or what he will do next.

"I still think it is wrong, but my only alternative now is to go to court," he said.

Though McCarthy said he is open to any suggestions to reverse the IRS advisory, he is pessimistic. "Any chance of an appeal to reverse the ruling now is zero."

McCarthy said the association also sought a remedy through Congress. "We floated it by a couple of key people and got no place."

For now, the association recommends that dealers consult their accountants. NADA reminds dealers that the IRS can go back only three years with audits.

Meanwhile, Robertson is forging ahead. He has retained Don Alexander, a Washington-based attorney who was the commissioner of the IRS during the Nixon and Ford administrations.

Robertson wants legislation changing the IRS' interpretation of the tax code, or language inserted in the code that exempts dealers from the prepayment of premiums rule.

But progress so far has been minimal, though Robertson has brought the issue to the Bush administration.

"Though we have yet to make a change in the interpretation, the Bush administration has shown a willingness to weigh the merits of our arguments," he said.

He has marshalled the support of some state dealer associations.

For independent administrators, the stakes are high. It means dealers selling independent extended service contracts will have to keep extensive records on the prorated portion of premiums for each contract sold, which they never had to keep before the advisory.

And because the manufacturers are the principals in the factory programs, they are taxed, which gives them a competitive advantage over independent administrators.

Prices of extended service contracts offered by independent administrators and the manufacturers are similar, so independents can't simply reduce the prices of their programs to offset the impact of the tax hit taken by the dealer in the first year.

That means the added burden of providing amortization schedules to dealers will be costly to administrators.

One remedy might be to make independent administrators the obligors on extended service contracts, like the manufacturers are on their contracts.

But only a handful of states allow independent administrators to be the obligors. ■

Independents say ruling gives factories a monopoly

CHARLES M. THOMAS
Staff Reporter

Extended service contract administrators say an Internal Revenue Service tax rule changing the way dealers account for costs and income of extended warranties will create a monopoly for factory programs.

"All factory programs are structured in a way that the dealer serves as agent, so the IRS advisory doesn't apply to them," says Paul Askos, president of Western National Warranty Corp., based in Scottsdale, Ariz.

But it does affect dealers who sell independently administered service contracts. It "will eliminate the competition, so the factory programs will be the only ones available to dealers," he says.

Western National is one of two extended service contract companies seeking a remedy to the ruling, called an advisory, through the Treasury Department or legislation.

Askos says three Western National dealers have been audited and are appealing. One was assessed $187,000 in back taxes and interest.

Under the new advisory, the only alternative for extended service contract administrators "is to provide dealers with amortization schedules on their book of business," he says.

That would be costly, making the programs less competitive with factory programs, Askos says.

Even the Financial Accounting Standards Board's interpretation differs from the IRS advisory. Says Askos: "It is very clear according to FASB that the cost of service contracts should be amortized over the life of the contract and so should income." ■

TOYOTA HIKES MR2 PRICE

TORRANCE, Calif. — Toyota Motor Sales U.S.A. Inc. has announced an increase of $1,610, or 10 percent, in the price of its 1993 MR2. The new model is $17,658; the 1992 version was $16,048.

The 1993 MR2 Turbo is $20,278, up $900, or 4.5 percent.

An SE four-door sedan with a V-6 engine has been added to the Camry lineup. It has a sticker of $18,528 with five-speed manual transmission and $19,328 with automatic. With automatic transmission, the Camry SE is $1,850 less than the top-of-the-line Camry XLE V-6 sedan.

Both new models go on sale this month.

ANNUAL MEETINGS SET

DETROIT — The Big 3 automakers have set the dates and locations for their annual meetings.

The General Motors annual meeting will be held at 9 a.m. Friday, May 22, at the Grand Wayne Center in Fort Wayne, Ind. It will be followed by a tour of GM's Fort Wayne truck assembly plant.

The Chrysler Corp. annual meeting will be 10 a.m. May 14 at the Chrysler Technology Center in Auburn Hills, Mich.

The Ford Motor Co. annual meeting will be May 14 at the Fairlane Grand Manor in Dearborn, Mich. No time has been set.

GM FORMS HISPANIC PACT

DETROIT — General Motors signed a joint declaration with the Hispanic Association on Corporate Responsibility acknowledging the automaker's commitment to enhance relations with Hispanics and other minorities.

In the declaration, GM promises to continue to inform its suppliers of its commitment to equal opportunity and minority-supplier development. In turn, the association will inform the Hispanic community about GM's commitment and help identify potential Hispanic dealers and suppliers.

CONTENT

Honda Marysville tops Chrysler; other transplants are far behind

continued from PAGE 1

imported parts, for 99.9 percent domestic parts content.

The data comes from the Foreign Trade Zone Board annual report, a document that compiles statistics from foreign trade zone subzones around the country. Most car plants have been declared foreign trade zone subzones in order to receive tariff breaks on imported parts.

The report reveals how much U.S. material is used at most U.S. plants. GM's factories appear to use the highest percentage of U.S.-sourced materials, followed by Ford. Honda's Marysville, Ohio, assembly plant shows up with a higher percentage of U.S. content than any of Chrysler's.

A spokesman for Honda of America Manufacturing Inc. in Marysville warned that the official financial data contained in the foreign trade zone report is "not a totally reliable way of measuring U.S. content."

For one thing, the Honda foreign trade zone includes parts and materials for a motorcycle assembly plant, although it is modest in size and the company says its percentage of U.S. content is about the same as for cars.

Also, in all foreign trade zones, numbers can be inflated when parts leave the zone temporarily for additional machining. Finally, if a U.S. supplier imports parts, pays duty on them, then builds a sub-assembly it ships to a foreign trade zone, the entire value would show up as domestic content.

But the foreign trade zone figures provide a relatively uncomplicated record of which plants rely on imported parts, and it reveals how far behind the Japanese transplant automakers were in sourcing U.S. content. Except for Honda, the transplants fell below 50 percent in the 1990 model year.

Japanese carmakers, which have been under pressure to source more American-made components, commonly cite "domestic content" levels based on a formula devised by the EPA. That formula includes such overhead expenses as workers' wages, advertising and plant mortgage costs.

When such overhead is included, for example, a Toyota Corolla made in Fremont, Calif., in 1990 had an EPA domestic content of about 70 percent. Actual domestic component purchases equaled 39 percent, according to the Commerce figures.

The foreign trade zone report for 1990 does not cover a few plants. Some did not have subzone status — such as GM's Van Nuys, Calif., plant, which builds the Pontiac Firebird and the Chevrolet Camaro — and others did not use the zone they had. Ford's Louisville, Ky., plant is a registered subzone, but in 1990 the company felt it could not adequately monitor data for the zone and did not use it.

Under subzone rules, a carmaker pays no duty on imported parts until a vehicle is completed and shipped. The delay in payment helps cash flow, and the rates are lower. Duty on most imported parts is 6.9 percent, while the duty on complete vehicles is 2.5 percent.

A foreign trade zone can cut duty payments substantially.

The duty savings for Nissan Motor Manufacturing Corp. U.S.A., which imported about $811 million worth of parts in 1990, was about $36 million, and Mazda Motor Manufacturing (U.S.A.) Corp., which imported $988 million in parts, saved almost $44 million. ■

Japan sales continue slide; Feb. off 3%

MARY ANN MASKERY

Staff Reporter

TOKYO — New-vehicle sales in Japan fell 3.3 percent in February to 458,618 units, marking the 10th straight month of year-to-year decline as demand remained weak in the mainstream small-car category.

According to preliminary data reported last week by the Japan Automobile Dealers Association, sales in the segment from 660 cc to 2.0 liters slid 12.3 percent last month to 256,456 units. But demand for cars in the near-luxury and luxury classes above 2.0 liters surged 44.4 percent, to 63,359, continuing an upturn that began last summer. The figures do not include mini-vehicle sales, which are reported separately.

Analysts said they expect the market to remain weak until at least midyear.

"Given the condition of the economy, there is no reason to expect a change in the small-car segment soon," said Neal Doying, who follows the industry for Baring Securities in Tokyo. "The large-car segment can continue to increase without having a major impact on the total market."

Toyota Motor Corp., the market leader, reported a 1.1 percent decline in sales from a year earlier to 198,118 units. The Corolla, the company's biggest seller, fell 8.3 percent to 22,299.

Nissan Motor Co. Ltd. sales fell 4.2 percent to 111,736; Honda Motor Co. declined 9.1 percent to 30,216; and Mazda Motor Corp. was down 6.8 percent to 34,748.

Mitsubishi Motors Corp. reported another month of strong sales, up 9.4 percent to 38,699 units, based largely on sales of recreational vehicles and the recently remodeled compact Mirage. The Diamante, which helped pace the growth in Mitsubishi sales last year, showed a 34 percent decline.

Suzuki Motor Co., the only other company to report an increase in sales for February, was up 14.7 percent to 3,923 units.

Import sales dropped for the 14th consecutive month, to 12,720 units, as demand continued weak for German makes. Volkswagen sales were down 24.8 percent, to 1,803, prior to new-model introductions expected in April, while Audi declined 17.5 percent to 779 units. Mercedes-Benz was down 5 percent to 2,543.

BMW, which reported a turnaround in January, said sales fell 17.2 percent in February to 1,961 units. The company said it could not sustain January's momentum because of a shortage of right-hand-drive 3-series models.

General Motors sales rose 8.1 percent to 785 units; Chrysler Corp. rose 3.8 percent to 108; and Ford Motor Co. declined 10.2 percent to 221. Honda of America imports shot up 65 percent from a year earlier, to 1,125 units. ■

TARIFF

Senate weighs 25% tax

continued from PAGE 1

Sen. Lloyd Bentsen, D-Texas. Bentsen is chairman of the Finance committee and one of Congress' most powerful critics of Japan's trade practices.

Under the proposal, minivans and four-door sport-utilities would be reclassified as trucks. As a result, tariffs would rise to 25 percent, up from the current level of 2.5 percent. The change would add between $1,500 to $6,000 to sticker prices, according to the American International Automobile Dealers Association.

Spokesmen for import firms contend the changes would hurt consumers by raising prices higher and limiting selection.

At Range Rover of North America Inc., officials said the tariff hike would trim sales and "result in lost jobs and closed dealerships."

Range Rover dealers sell only one product: a British made sport-utility that costs about $40,000.

"It is inconceivable that the higher prices and reduced selection this bill would cause could be deemed to be a positive step," the company said in a statement.

Interest in raising the tariff on minivans has increased since last December when the U.S. Department of Commerce concluded that Mazda and Toyota were "dumping" minivans in the U.S. market at less than fair market value.

The Commerce decision, which won't be final until late spring, resulted from dumping charges filed by domestic automakers. The Big 3 hold about 90 percent of the U.S. minivan market. Imports accounted for about 15 percent of all minivan and sport-utility sales in the United States in 1991.

Increased tariffs on minivans and sport-utilities is also part of the Gephardt-Riegle trade bill. That measure would set limits on U.S. sales of Japan's imports and transplants unless Japan reduces its current $43 billion trade surplus with the United States.

The proposed 25% tariff on imported minivans and sport-utilities could add $6,000 to a Range Rover's sticker price.

Meanwhile, the U.S. Treasury Department is still reviewing its 1989 decision to keep the tariff on minivans and four-door sport-utilities at 2.5 percent and set the tariff on two-door trucks at 25 percent. At that time, Treasury overruled Customs officials who had recommended raising the tariffs on minivans and four-door sport-utilities.

The increased tariff was not part of the House tax bill approved in late February. For the tariff to become law, it must now be approved by the full Senate, then survive House-Senate Conference Committee negotiations to produce a bill that both chambers would pass.

The House bill includes the same luxury tax provisions as the Senate proposal.

If the tariff hike is part of the final tax bill, it likely faces a veto by President Bush. The proposed tariff increase is opposed by U.S. Trade Representative Carla Hills, one of the administration's staunchest advocates of free trade. AN

Ford begins recall

DEARBORN, Mich. — Ford Motor Co. has begun notifying customers to bring in about 755,700 trucks for modifications to automatic transmissions that slip out of park.

The recall covers 1990 Rangers, 1990-91 Aerostars and 1991 Explorers with the A4LD transmission. Ford said the park mechanism may not take hold, and the vehicle may roll as if in neutral.

Owners were initially notified in October and cautioned to use the parking brake. AN

MEXICO

Free trade pact gets Big Five support

continued from PAGE 3

compete with them, they see it asan opportunity to rise from the hibernation that has marked the industry since government decrees began regulating it 30 years ago.

The first set of rules chased such names as Fiat, Volvo and Peugeot from Mexico. Today's Big Five were allowed to import vehicles only two years ago. Last year, imported models accounted for just 1.5 percent of their 614,823 sales.

"We can't be isolated" from the economic blocks being formed around the world, argues Victor Barreiro, managing director of Ford Motor Co. in Mexico and the company's first Mexican-born president. He sees a U.S.-Mexico free-trade agreement as a necessity if the United States hopes to compete against the Pacific basin and Europe.

Automakers also hope a trade deal will make their operations more efficient. For example, the product mix at Ford's plant in Cuautitlan includes about 11,000 Thunderbirds and Cougars annually for Mexico. Meanwhile, a huge Ford plant in Ohio turns out the same cars at well below capacity. With a unified market, production could be consolidated into one plant for both markets.

More importantly, Mexico's makers see free trade as a key to foreign investment. That will help all sectors of the economy and raise the standard of living for a majority of Mexicans who now don't earn enough to buy a new car. That includes auto workers, who take home about $100 a week.

While manufacturers unanimously support the idea of free trade, most dealers are less than ecstatic. Last year, dealers representing the Big Five racked up an average of 735 car and truck sales each: about 200 more than the average U.S. dealer. Bankruptcies are almost unheard of, and stores commonly stay in family hands generation after generation.

"Our dealers are absolutely scared of this movement," says Ari Kahan, immediate past president of the Mexican dealers association. He acknowledges that dealers feel threatened by the prospect of more players in the market, but the group is pushing for it anyway.

"The world is going that way," he says. "We cannot close our eyes."

Automakers themselves want any free-trade deal to give them special treatment as a reward for sticking it out in Mexico over the years. And they caution that free trade should be phased in gradually over 10 to 15 years.

In the meantime, the Mexican market is expected to continue to grow — with or without a free-trade deal.

The Mexican dealer association is forecasting another 14 percent gain in car and truck sales for 1992. Ford's Barreiro says the Mexican market will reach 1 million sales by 1996.

But fortunes can change quickly in Mexico. It took double-digit sales increases in the last four years for the Mexican market to recover from the early 1980s, when plunging oil prices sent the economy into a tailspin.

If the memory of those lessons were lost on the gathering at Monterrey, Richard Strauss, the president of the U.S. National Automobile Dealers Association, offered this maxim of life in an open market: "Even in the best of times, you must always be prepared for the inevitable downturn." ■

940 series	$1,500-2,500
780 coupe	$2,500

GM ADS

Campaign names Japanese rivals

continued from PAGE 3

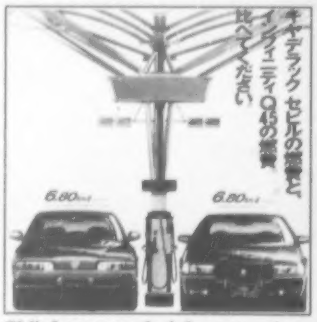
indirect swipe at Coca-Cola in a series of TV ads. But the ads were quickly dropped by the networks, prompting charges from Pepsi that they had knuckled under to pressure from Coca-Cola.

"The Pepsi ad came the closest, but even that skirted it," said David Bodkin, GM's director of Asian public affairs. "This leaves nothing to the imagination."

Old hands in Japan still recall a Nissan Sunny ad from almost 25 years ago, in which Nissan sought to point out that its basic-transportation model was larger than the rival Toyota Corolla. The ad read "our Sunny looks bigger than the neighbors' car."

Toyota reacted angrily, and no Japanese auto ad has overtly gone after a competitor since.

"We know it's done in the United States a lot," said Nissan spokesman Toshiaki Yasuda. "But no major Japanese company has ever done a campaign like that. It has to do with Japanese practice or values."



GM's Japanese ads defy convention.

As long as the GM ad does not distort the truth, Yasuda said, there would be no reason to make a formal complaint.

"There is no law against it, just a kind of tacit agreement within the advertising industry," he said.

GM is projecting sales of about 500 Sevilles in the 1992 model year, up from 175 in 1991. The Seville sells for 7.45 million yen in Japan (under $60,000 at current rates).

The company sold about 1,000 Cadillacs in Japan in 1991, mostly Eldorados and Fleetwoods.

General Motors Japan is forecasting sales of 12,000 North American vehicles in 1992, up from 10,300 last year. ■

Legacys, Loyales get cash incentives

incentive WATCH

Subaru of America Inc. announced an incentive program that pays dealers $500 to $1,200 on 1992 Legacys depending on when the vehicle was invoiced and $1,200 to $1,700 on 1991 Legacys depending on region.

The program also includes customer rebates of $500 on 1992 Legacys and $500 on 1991 and 1992 Loyales.

The payments expire April 2. ■

INCENTIVE WATCH — CUSTOMER INCENTIVES

NEW PROGRAMS	
SUBARU (expires April 2)	
Loyale (1991-92)	$500

Pickups (1990-92, Southwest region)	$1,000
Mirage (1990-92, Southwest region)	$500

Saturn trims frills to save $9.8 million

THE ASSOCIATED PRESS

SPRING HILL, Tenn. — Turning utilities off on weekends and cutting out overnight mail are among moves officials at General Motors' Saturn Corp. hope will trim costs by $9.8 million this year.

"In today's economic conditions, there isn't a business anywhere that isn't paying attention to cost," Saturn spokesman Bill Betts said.

The cost cutting comes in the wake of GM's record $4.5 billion 1991 loss and its plans to idle 21 plants and trim its U.S. and Canada work force by 80,000 by 1995.

Saturn, which has formed five task forces in an effort to make the $1.9 billion plant profitable by next year, was spared from the cuts. But Saturn hopes to save millions with the new moves.

Among the cuts implemented are:

- Turning off utilities during weekends and other downtime for savings of $4 million.
- Reducing travel by $2.7 million.
- Phasing out a student intern program, saving $1.4 million.
- Eliminating nearly all overnight mail between its Troy, Mich., office and Spring Hill, saving $1 million.
- Reducing by 50 percent the number of facsimile and copy machines in Michigan and Tennessee, saving about $625,000.
- Eliminating paid car washes for cars given to some Saturn employees who evaluate them. Also, fuel and other operating costs incurred while on vacation will now be the employees' responsibility, saving $100,000. ■

York gets board seat at Chrysler

MARY CONNELLY

Staff Reporter

Jerome York, Chrysler Corp. executive vice president and chief financial officer, has assumed greater stature in the company because of the departure of Vice Chairman Robert S. "Steve" Miller Jr.

Last week York was elected to the company's board of directors, effective April 1. York, 53, is one of three company executives on the Chrysler board. The others are Chairman Lee Iacocca and President Robert Lutz.

York's election to the board came just a week after he inherited some of Miller's responsibilities. Under the corporate restructuring precipitated by Miller's decision to become an investment banker, Chrysler Financial Corp. and Chrysler Technologies Corp. began reporting to York.

York now is poised to follow Miller as the company's financial quarterback. York is even mentioned as having a possible role in the Iacocca succession drama. The Chrysler chairman has said he will step down on Dec. 31 at age 68.

Miller, along with Lutz, was a candidate to succeed Iacocca. In addition to seeing a wider role for York if Lutz is named chairman, some have even suggested that York may have caught Iacocca's eye as a possible successor.

York's corporate background is varied. An engineer by training, he joined Chrysler in 1979. He has served as vice president of Dodge Division, vice president of Truck Operations and vice president of Advanced Manufacturing Operations. He was named vice president and controller in May 1989 and executive vice president and chief financial officer in May 1990.

2 million reached; leads '91

ANNE E. WRIGHT

Chief Statistician

U.S. and Canadian car and truck production reached 2 million last Friday, 12 days ahead of 1991.

Year-to-date production of cars and trucks in the United States and Canada is 2,000,750 units, 9.8 percent ahead of the 1,822,185 built last year at this time.

February production of cars and trucks in United States and Canada totaled 917,136, up 10.6 over January and 21.4 percent more than the year-ago month.

In February 1991, the Big 3 idled an average of 16 plants per week because of sluggish sales and high inventories. This year, they idled an average of nine plants per week in February.

At Ford Motor Co., an average of three plants per week were down this February and six last February. General Motors idled an average of five per week this year and six last year. Chrysler Corp. averaged one idle plant per week this year and three per week last year.

U.S. and Canada car production in February was 520,282, up 6.1 percent over February 1991. U.S. producers assembled 4.3 percent more cars, while Canadian output climbed 17.4 percent.

February truck production in the United States and Canada was 396,854, up 49.6 percent over last year.

U.S. truckmakers' output was up 46.0 percent, and Canadian truck output was up 62.8 percent.

Last week, U.S. and Canada car producers scheduled 138,189 units, up 5.0 percent over the prior week and 13.4 percent more than the same week last year.

Year-to-date car production in the United States and Canada through last week trailed the year-ago total by 1.9 percent.

Estimated U.S. and Canadian truck production last week was 102,928, virtually equal to the prior week and 24.3 percent above the same week one year ago.

So far this year, truck production is up 30.4 percent over 1991.

Last week's estimated daily-build rate was 48,223 cars and light trucks in the United States and Canada, up 2.7 percent over the prior week and 17.8 percent above the year-ago week.

GM will idle six plants this week in response to slow sales and high inventories.

They are: Arlington, Texas; Oklahoma City; Willow Run, Mich.; Oshawa, Ontario (Nos. 1 and 2) car plants and the Tarrytown, N.Y., truck plant.

GM also reduced production at the Lake Orion, Mich., car facility to one shift this week and next.

Overtime was scheduled at four GM truck plants last Saturday: Baltimore; Janesville, Wis.; Scarborough, Ontario, and Oshawa Truck in Oshawa, Ontario.

Ford ran Saturday overtime at the Kansas City, Mo., truck plant last week.

Chrysler's St. Louis and Windsor, Ontario, truck plants worked overtime last Saturday.

BMW working on smaller car

FRANKFURT — BMW AG confirmed last week that it is developing a smaller car based on its year-old 3 series to compete with Volkswagen's six-cylinder Golf. The new generation Golf is the top-selling vehicle in Europe.

Wolfgang Reitzle, BMW's chief of research and development, said the new entry-level vehicle would be based on the 3 series, but have a redesigned body and house specialized mechanicals. BMW said it is too early to discuss the new car in detail or to say when it will be introduced.

The lower end of the luxury market has been targeted by Japanese makers as well as other European marques. Earlier this month, Mazda Motor Corp. introduced its Xedos luxury marque in Europe and Toyota Motor Co. launched the Carina E, which will be built in Britain.

Toyota dealers feel IRS bite

Mazda stores also periled by service contract ruling

CHARLES M. THOMAS
Staff Reporter

Thousands of import dealers, including Toyota and Mazda retailers, are vulnerable to Internal Revenue Service audits on the sale of extended service contracts.

Thirty Toyota dealers have been the target of IRS audits or inquiries, and some have been assessed back taxes, penalties and interest on sales of the automaker's Extra Care extended service contract, Toyota Motor Sales U.S.A. Inc. confirmed last week.

Extended service contracts naming dealers as principals are considered pre-paid insurance under a final ruling by the revenue service last month. Hence, dealers must expense their cost over the term of the contract instead of the year in which the contract is sold.

Though the ruling targeted Ford Motor Co.'s program, other extended service contracts sold by independent administrators and other automakers are affected.

"Toyota is aware of the IRS position on service contracts, and we believe it is unfair," said Toyota spokesman John McCandless. "It has the potential to put many dealers out of business and needs to be reviewed more carefully."

He said Toyota will support dealers in the event of an IRS inquiry, but declined to say if the automaker will pay interest and penalties for dealers. So far, the company hasn't paid interest and penalties assessed to dealers.

Michael Petrizzo, director of service parts marketing for Mazda Motor of America Inc., said the company changed its insurer last June to American Road Insurance Co., a subsidiary of Ford Motor Co. Under the new extended service contract, Mazda is the principal.

But under the prior extended service contract

Ford plans new truck to battle Toyota

KRISTINE STIVEN BREESE,
KATHY JACKSON
and MARY ANN MASKERY
Staff Reporters

Ford Motor Co. is preparing a new mid-sized pickup truck to battle Toyota's planned entry in that developing segment.

Toyota Motor Sales U.S.A. Inc. confirmed last week it will begin selling its long-anticipated mid-sized pickup sometime during the 1993 model year. The word came one year after Toyota said the project was on hold indefinitely.

Meanwhile, Ford is working on a mid-sized pickup of its own, according to a highly placed Ford executive.

Toyota's entry and the prospect of Ford's arrival promise to reshape the U.S. pickup market. The 2 million unit segment is dominated by compact models, such as the Ford Ranger and Toyota's current pickup, or full-sized models, such as Ford's F series and General Motors' C/K line.

The only in-between models are Chrysler Corp's Dodge Dakota and

Dealership decline is steepest since '82

JOHN K. TEAHEN JR.
Senior Editor

It wasn't the worst of years for dealer mortality, but 1991 brought the biggest loss the industry has sustained since 1982.

The annual *Automotive News* census finds that the number of new-car dealerships in the United States declined by 904 during recession-plagued 1991.

At the beginning of this year, 23,368 outlets were doing business, down 3.7 percent from the 24,272 in operation when 1991 dawned.

It was the most brutal year since 1982 when 974 establishments bailed out of the dealership business.

The *Automotive News* tally includes Big 3 dealerships and those handling foreign-badged cars. Both segments shared in the decline.

Numerically, the Big 3 lost more new-car dealerships last year than the imports did. But the imports' downturn was greater on a percentage basis.

The Big 3 bid farwell to 628 outlets — 252 at Chrysler Corp., 244 at General Motors and 152 at Ford Motor. That total of 648

Bush gives auto industry break on vapor recovery

MAX GATES
Staff Reporter

President Bush's announcement last week that the auto industry had won a 15-year battle over capturing gasoline vapors at the pump marked another in a series of White House moves aimed at boosting the auto industry.

Bush, in an address to the Economic Club of Detroit four days before Michigan's primary, said that the EPA has decided to not require carmakers to equip cars with onboard vapor recovery canisters.

In the same speech, Bush pledged to veto any new legislation increasing fuel economy requirements "that will destroy the auto industry and cost American jobs." He also reaffirmed his support of a free-trade agreement with Mexico and said more needs to be done to limit anti-trust rules from impeding U.S. corporate efforts to compete globally.

Although Bush has steadfastly supported free — and fair — trade with Japan, a series of events in Washington have recently tightened the screws on Japanese automakers since the president's con-

Mustang redo

Ford Motor Co. is revamping the Mustang for the 1995 model year with an entirely new skin. Power will be provided to the rear wheels by V-6 and V-8 engines. Stopping hardware will include four-wheel-disc brakes with anti-lock assistance. Engineers familiar with the program say the new car features major refinements to the previous platform.

BMW hires political insider

WOODCLIFF LAKE, N.J. — BMW of North America Inc. has hired Craig Helsing, a former GOP official, as vice president for corporate affairs and customer relations, which includes responsibility for lobbying in Washington.

Helsing, 41, replaces Friedrich Hanau, 64, who has been semi-retired since the end of 1990. Helsing worked most recently for the Department of Commerce, as assistant secretary of legislative and inter-governmental affairs.

He was also senior adviser to Lee Atwater, deputy campaign manager for the 1984 Reagan-Bush campaign.

Porsche reports profits slide

STUTTGART, Germany — Porsche AG reported Friday that earnings for the first half of its fiscal year, ending Jan. 31, plunged 97 percent from a year earlier, to the equivalent of $1.97 million, as worldwide sales continued to worsen.

The luxury sports car maker said revenue fell 23.3 percent, to the equivalent of $677.8 million, as unit sales fell 25 percent, to 10,562 units.

In the United States, Porsche's biggest market, sales plunged 54 percent from the year-ago period, to 1,798 units.

Despite the gloomy results, Chairman Arno Bohn told the annual shareholders' meeting that Porsche will remain in the black in fiscal 1992 because of lower production costs.

Meanwhile, the company's controlling shareholders, the Porsche and Piech families, told shareholders they would "consider" reducing the number of seats they hold on the 12-member supervisory board.

The families' non-committal statement was in response to demands from non-voting stockholders that they surrender their five seats.

Brown, Fisher get new duties

Brown

Fisher

DETROIT — Editor Peter Brown will take on the additional duty of associate publisher of *Automotive News* effective immediately, Keith Crain, publisher and editorial director, announced last week. Brown has been editor of *Automotive News* since February 1989.

In a related move, Edward Fisher has been promoted to advertising director for *Automotive News*. He had been assistant sales manager since January 1989.

In his new post, Fisher replaces M. Reid MacGuidwin, who retains the title of vice president/director of marketing. MacGuidwin, 66, will continue to work on special projects until he retires at the end of the year.

Under the new structure, the advertising sales department will report to Fisher, who will report to Brown. Brown reports to Crain, who is also vice chairman of Crain Communications Inc. "We are pleased that we have the depth of talent in this organization that allows us to make this smooth, natural transition," Crain said.

Brown, 43, joined Crain Communications in September 1984 as the first editor of *Crain's Detroit Business*, a sister publication to *Automotive News*. He was named associate publisher of *Crain's Detroit Business* in December 1987.

Brown came to Crain Communications from the *Detroit Free Press*, where he had been a reporter and copy editor. He holds a bachelor of arts degree from Ohio Wesleyan University and a master's from the University of Michigan.

Prior to joining *Automotive News*, Fisher, 44, was Detroit advertising sales manager for *Southern Living*, a consumer publication based in Birmingham, Ala. He also has been a media supervisor at the Young & Rubicam advertising agency and a media planner at D'Arcy, McManus & Masius. He has a bachelor's degree from Wayne State University.

MacGuidwin

MacGuidwin joined *Automotive News* in January 1972 as an advertising sales representative. He was promoted to marketing manager and then to director of marketing with responsibility for advertising sales. In 1988, he was named a vice president of Crain Communications, which publishes *Automotive News* and 24 other business and consumer publications.

Before joining Crain, MacGuidwin was Detroit regional sales manager for *Automotive Industries* magazine. He also held sales positions at *Design News* and *Chemical Week* magazine. AN

briefly

The winner gets a limo

The presidential candidates have been talking a lot about cars, including which ones they'd like to own and drive. A survey by The Associated Press said Jerry Brown's dream car would be "a non-polluting, energy-efficient, American-made car." Bill Clinton recently purchased his dream car: a 1966 **Ford** Mustang convertible. Paul Tsongas wants a **Jeep** Cherokee. Pat Buchanan would like a "1930s Gatsby-style convertible," while David Duke would choose a **Chevrolet** Corvette. President Bush declined to state a preference, but a campaign adviser was quick to take a jab at challenger Buchanan. "The fact that he calls for 'America first' but drives a **Mercedes** probably won't be lost on the good people of Michigan," he said.

THE PHANTOM SPEAKS — The banter never ends in the battle for sales leadership in full-sized trucks. **Ford Motor Co.** executives, still smoldering over remarks made by **Chevrolet** officials last year, sent a masked man to the *Automotive News* office last week. "Chevy says that Ford is selling a phantom model," the masked man said, referring to a statement by Jeff Hurlbert, Chevy general marketing manager, that Ford could not possibly have sold 34,000 F-series trucks in the final 10 days of December. But based on registrations compiled by R.L. Polk and Co., Ford says that phantom vehicle was the F series, and it outsold Chevy's C/K by 21,145 units during the 1991 calendar year. The masked man advised Chevy officials to go see *Phantom of the Opera* if they want to see a real phantom.

TRADE WAR — If a free trade agreement with Canada and Mexico is a good idea, opening borders with Japan would be even better, suggests U.S. Rep. Sam Gibbons, D-Fla., chairman of the House subcommittee on trade. Not so, says U.S. Trade Representative Carla Hills. Free trade agreements are effective for breaking down tariffs and duties, Hills told Gibbons, but "in the case of Japan . . . it would be difficult to get at the impediments through an FTA." Hill suggests continued backroom jawboning over impediments like *keiretsu*.

ONLY BARGAIN IN NEW YORK — Parking places are at a premium in land-starved Japan. How bad is it? Seth Petok, manager of **Nissan Finance of America Inc.** in Manhattan, said it cost him $200 when his car got towed from a no-parking zone in New York. In Tokyo, he said it could have cost him $1,400.

AUTHOR, AUTHOR — Former **Chrysler Corp.** manufacturing honcho Dick Dauch is stamping out a different product these days — a book titled *Passion for Manufacturing*. The book, being published and distributed by the Society of Manufacturing Engineers, will draw on Dauch's 27 years at Chrysler, **General Motors** and **Volkswagen of America.** Scheduled for early 1993, the book will present Dauch's management and manufacturing philosophies and his call for a stronger voice for manufacturing if companies wish to compete globally. In April 1991, Dauch left Chrysler, where he was executive vice president of worldwide manufacturing.

Dauch: by the book

Japanese farm out production

System is vulnerable to quality problems

MARY ANN MASKERY
Staff Reporter

TOKYO — Japanese automakers are buttressing their reputation for being the world's most efficient producers by a little-known expedient — paying other companies to build many of their vehicles.

Among the 50 models that Japan's major producers farm out to contract assemblers are some of the industry's best known exports:

- Toyota's Previa minivan and MR2 sports coupe.
- Nissan's 300ZX sports car and Bluebird/Stanza sedans.
- Mitsubishi's Pajero/Montero sport-utility.
- Isuzu's Rodeo and Amigo sport-utilities.

Industry analysts and economists call the system of contract assembly — which turned out 22.5 percent of Japan's total vehicle production last year — an "escape valve" and "safety net" that maximizes profit for the primary producers by assigning much of the cost and risk of manufacturing to others.

"The system is a fantastic advantage" for Japanese carmakers compared with their American competitors, said John Krafcik, a contributor to the Massachusetts Institute of Technology study on lean production, *The Machine that Changed the World*.

By out-sourcing assembly as well as parts, Krafcik said, Japanese companies benefit from lower costs for labor, tooling and inventory while simultaneously enjoying greater production flexibility.

In essence, he and others explain, the subcontractors are taking on many of the risks normally borne by the manufacturer.

"They can load their own assembly plants to maximum effect, and give the low volume stuff to the others," said Krafcik, who has since joined Ford Motor Co. "It is the ultimate buffer."

James Womack, a co-author of the landmark MIT study, said the main advantage of Japan's subassembly system is the simpler management system it gives the primary producer.

"By out-sourcing work, Toyota has fewer employees on the books and can choose them selectively and give them a sense of what they are doing and why," he said last week. "In the great vastness of GM, it is difficult to figure out what you are doing."

But, he stresses, there is no point to subcontract assembly if quality suffers.

"If you drop the ball on quality, it does not matter how low your cost of production is. Look at Hyundai," he said, referring to the Korean carmaker's admitted quality problems.

Michael Smitka, an associate professor of economics at Washington & Lee University who has done a study of Japanese manufacturing, said the initial benefits

Chung set to engineer Hyundai's U.S. revival

Quality questions tower over maker

KRISTINE STIVEN BREESE
Staff Reporter

FOUNTAIN VALLEY, Calif. — Just as its zippy concept car did at the Detroit auto show, the arrival of Hyundai Motor America's new president signals something's up at the Korean importer.

The sleek HCD-1 prototype exposed the design creativity that had been lurking at Hyundai while the company has turned out a series of plain sedans. And one of the project's chief supporters in Korea is now Hyundai's new U.S. boss, D.O. Chung.

Chung says a car like the HCD-1 is important because it carries benefits that can't be measured in dollars and cents.

But Hyundai needs more than an image. U.S. sales have plummeted, largely because Hyundai spun out on quality after racing into the United States six years ago.

The quality challenge in the United States helps explain why Chung was hand-picked by chairman Se Yung Chung to fill the newly created position of vice president of quality in Korea last year. Looking back, Chung thinks the "special mission" was simply a homework assignment for the new U.S. job. Now his animated style and honest appraisal of where Hyundai stands has raised hopes that Hyundai's worst days will soon be behind.

TIM PETROS

D.O. Chung, shown with a model of the HCD-1, believes engineers hold the key to restoring Hyundai's U.S. image and sales.

Hyundai profits fall ➤ 23

Chung, 51, arrived in the United States in late January to take over from H.W. Baik, who returned to Korea to become vice president of export operations at Hyundai Motor Co.

Chung was trained as an engineer, and his reputation as a "car guy" has already helped endear him to the company's product team. One of his first moves was to switch reporting channels and have Hyundai's product planning, product development and strategic planning departments report directly to him.

"President Chung is much more involved in the day-to-day operations of the company — especially with our department," says Mike

AMERICAN FIRST AID FOR ISUZU

Sullivan prescribes more product sharing with GM

RICHARD JOHNSON
Staff Reporter

TOKYO

Forty-five days into his landmark assignment at Isuzu Motors Ltd., General Motors career-man Donald Sullivan is not exactly taking his time settling into the job.

Instead, he has hit the ground in a mad dash, working to stop the bleeding at Japan's sixth-largest vehicle maker, which is 37.5 percent owned by General Motors.

"My biggest problem has been finding enough time to sleep," he said in an interview last week.

Among his first impressions: the existence of a surprisingly wide communications gap between the two companies, and — here it is again — unabashed wonderment at the Japanese work ethic.

Sullivan, 48, came to Isuzu in late January as executive vice president, or *de* facto chief operating officer. As such, he is the highest-ranking *gaijin,* or foreigner, at any Japanese automaker. Responsible for corporate, product and production planning, and engineering, he reports directly to Isuzu's new president, Kazuhira Seki.

The first job, he said, is to make a recovery plan established last October "more robust" by reining in costs and pushing for more product sharing with GM in North America — especially on the truck side.

Isuzu suffered a consolidated pretax loss of 54.14 billion yen ($413 million) for the year ended last October, after earning a small profit the year before.

But Sullivan said losses will be cut during the current fiscal year, and said the company will return to profitability in 1993.

Some of Sullivan's other objectives:

- Supply more cars to GM, for which it now builds the Geo Storm. For example, Sullivan said, he wants to build the replacement for the Pontiac LeMans.
- Collaborate more closely with Fuji Heavy Industries Ltd. at the jointly-owned, money-losing Subaru-Isuzu Automotive assembly plant in Lafayette, Ind.
- Prune Isuzu's range of truck offerings.

"My first priority, frankly, is to work toward a truck summit between General Motors and Isuzu," Sullivan said. "I think that's the greatest area of opportunity."

Meanwhile, any doubts about how a hard-charging, 26-year GM veteran would be received by Isuzu staffers have been eased.

"This organization has reached out to me — the genuineness of it just kind of makes me go 'Aw shucks,' " he said. "No hidden agendas, no surprises. It's been: 'How can we help you?' "

And there has been that first brush with Japanese drive.

"Before you go, people tell you about the work ethic here and they say it will surprise you," said Sullivan. "But I thought, 'I can outwork the average two people, I always have and I always will.'

"Well, the work ethic here *did* surprise me. Man, I feel like I'm knocking off at noon. I think they work too hard," he said.

Sullivan was uniquely qualified for the posting, having worked with Isuzu in several previous GM positions. His last GM post was group director of Product and Business Planning and program management at the C-P-C Group. Prior to that, he was at GM Europe.

Still, Sullivan has had a tough, crash course in Isuzu Motors.

"I thought I knew this organization," he said. "I'd been over to visit maybe a dozen times. But the wide-aisle walking tours that you get as a U.S. visitor are quite different from the Isuzu one-on-one immersion class

Donald Sullivan says the large communications gap between Isuzu and GM surprised him.

GM cut deal with China just in time, executive says

RICHARD JOHNSON
Staff Reporter

HONG KONG — General Motors got into China just before the door slammed shut on automotive joint ventures for at least five years, says GM's point man in the emerging Asia-Pacific region.

The company formed a joint venture in January to produce light trucks with Jinbei Automotive Co. in Shenyang. It settled on trucks after studying, and rejecting, a venture to build the Opel Astra or even North American J-cars at the Second Automotive Works plant in Wuhan, said Ronald Gilchrist, executive vice president of General Motors Overseas Corp. and head of the Hong Kong regional office.

Instead, GM will settle for being part of the "second wave" of passenger-car projects later in the decade, Gilchrist said in an interview here last week.

Gilchrist, who played a key role in setting up the landmark Beijing Jeep joint venture for American Motors in the early 1980s, said economic development in China has exceeded the expectations he had at that time.

"Even though now we are doing a project to put GMC trucks on the road," he said, "it's rewarding to see the number of (Jeep) Cherokees and the number of imported vehicles. When we started, there were hardly any cars on the road, let alone imported vehicles."

'93 Escort will debut with no price hike

ARLENA SAWYERS
Staff Reporter

DETROIT — Hoping to spotlight value, Ford Division will hold the line on prices of 1993 Escorts and will go national with its one-price Escort LX program.

Ross Roberts, Ford Division general manager, said last week that the company will not raise prices when the freshened 1993 Escorts are introduced May 21. Escort base sticker prices range from $8,355 to $11,871.

At the same time, the one-price Escort program, which has been limited to Ford's West, Southeast and Northeast regions, will become national.

Under the one-price program, 1993 Escort LX models with manual transmission will be priced at $10,899; with automatic transmission, the price will be $11,631. Air conditioning, power steering, rear defroster, dual remote control mirrors and AM/FM stereo radio are standard.

Roberts said the 1993 Escort may be introduced with a $500 customer rebate depending on market conditions.

The national 1993 one-price Escorts are $400 more than the 1992 one-price Escorts in the three test regions.

The one-price Escort is a marketing concept fueled by customer demand, Roberts said. It is also a way Ford Division can focus its marketing on product, rather than price.

"That's what the customers told us they wanted," said Roberts. "It takes the hassle out."

Ford has test marketed one-price Escorts in the three regions since last fall.

In those regions, all Escort LX models with manual transmissions are priced at $10,499, with a customer rebate cutting it to $9,999. The price of the Escort LX with automatic is $11,230; there is no customer rebate.

The lack of a sticker price increase on Escort models coupled with the one-price program means Ford has reduced the overall Escort price 0.2 percent, or about $25, said Keith Magee, Ford Division general marketing manager.

Though the new price will represent an increase in the test regions, the overall price reduction in non-test regions is $440 or 3.6 percent, he said.

For instance, in non-test regions, a comparably equipped LX wagon with manual transmission is almost $11,800, he said.

Roberts said the Escort market share so far this calendar year is 3.3 percent compared to 3 percent for calendar 1991.

Magee said Ford Division and Ford dealer ad associations will incorporate the one-price strategy into their advertising this summer.

Ford Division also has a spring ad campaign that promotes its vehicles as world class in engineering and quality.

The TV spots and newspaper ads feature Ford Division's entire car and truck line and carry the new tagline, "Ask anyone who's driven a Ford lately."

The tagline is to be the answer to Ford's well-known themeline: "Have you driven a Ford lately?"

The newspaper ads broke Feb. 24 in national newspapers. The TV campaign began last week.

Europe up despite dip in German car sales

DIANA T. KURYLKO
Staff Reporter

FRANKFURT — Despite continuing weakness in Germany and the United Kingdom, European new-car sales in February rose 4.5 percent from a year earlier on the strength of renewed demand in several major markets.

According to *Automotive News* estimates, sales in the 17-nation market rose to 1.1 million units last month despite a 5.5 percent decline in Germany, Europe's biggest market, to 324,000 units.

The United Kingdom, another crucial market, slid 12 percent to 109,400 units. But that was offset by gains in other major markets, including France, Italy and Spain.

Sales for the two-month period rose to 2.42-million units from 2.36 million a year earlier.

For the two months, German car sales were down only 1.1 percent, to 655,200 units, causing analysts to review prior forecasts. DRI/Europe in London is now projecting German sales this year of 3.45 million units, up from an earlier forecast of 3.34 million units.

NEW—CAR SALES BY COUNTRY IN EUROPE

Country	2 months 1992	Pct. change vs. 1991
Germany	655,200	– 1.1
Italy	523,300	4.0
France	339,700	1.9
United Kingdom	263,100	– 0.6
Spain	169,700	27.2
Netherlands	125,500	5.8
Belgium-Lux.	106,000	19.3
Austria	50,600	6.5
Switzerland	48,700	– 0.4
Portugal	40,200	24.3
Sweden	24,900	– 0.7
Greece	20,200	– 0.0
Finland	16,000	– 16.2
Denmark	13,900	27.7
Ireland	13,500	– 10.4
Norway	9,500	10.3
Total	**2,420,000**	**2.6**

"Germany keeps coming in strong," said Edmund Chew, a DRI analyst based in Frankfurt. "We thought it (the boom) was a one-time spend and that people had run out of money."

Sales in the United Kingdom continued weak through February, falling 8.6 percent to 263,100 units, as buyers deferred car purchases in anticipation of a cut in the special car tax (story on Page 10). The reduction, which was announced last week, should boost sales this year, analysts agree.

DRI has raised its forecast for sales in Britain this year by 40,000 to 50,000 units, to a total of 1.75 million.

EUROPEAN SALES BY MANUFACTURER

Manufacturer	2 months 1992	Percent share[1]	2 months 1991	Change percent

Skoda	5,300	0.2	6,800	– 22.1
Others	60,900	2.5	41,900	45.6
TOTAL	**2,420,000**	**100.00**	**2,357,700**	**2.6**

[1] Does not add to 100 because of rounding.
[2] Includes Volkswagen, Audi and Seat brands.
[3] Includes Fiat, Alfa Romeo and Lancia.
[4] Includes Opel, Vauxhall, GM—U.S. and Isuzu; excludes Saab.
[5] Includes Peugeot and Citroen.
[6] Includes Jaguar.

In the other major European markets, the industry showed signs of definite recovery.

Sales in Italy were strong, rising 4 percent to 523,300 units for the two months. France was up 1.9 percent to 339,700 units, while Spain jumped 27.2 percent to 169,700 units.

Among Europe's Big Six, Volkswagen Group sales through February were up 6.5 percent from a year earlier to 402,300 units, as share increased to 16.6 percent.

Fiat Auto was down 9.9 percent in the period to 300,600 cars, and is expected to continue to slip for several months.

Capacity-stricken General Motors leap-frogged from fifth place to third in February, with a 5.5 percent increase for the two-month period to 297,100 units.

GM began production at a new plant in Hungary plant last week (story on Page 35), and will be bringing its new east German plant in Eisenach on line in October with an annual capacity of 150,000 units.

The Hungary plant begins producing engines in July and will produce 200,000 powerplants at full capacity.

Both French manufacturers showed increases through February. Peugeot Group said its sales were up 7.9 percent to 289,500 units, while Renault's sales rose 10.3 percent to 256,800.

Spectators at the Geneva auto show got a good look at the wider, kidney-shaped grille BMW is using to distinguish its V-8-powered 7-series sedan from six-cylinder versions.

BMW brings back V-8 power for 7 series

JACK KEEBLER
Staff Reporter

BMW aims to do something this fall it hasn't done since the mid-1960s.

It plans to sell a passenger car with a V-8 engine.

At the Geneva auto show, BMW introduced two new eight-cylinder, multi-valve engines in the 7-series sedan. The new V-8s will fit between the existing range of six-cylinder engines and the V-12 offered in the 7 series.

The big sedans that carry the new engines are distinguished from six-cylinder-powered sedans by wider, kidney-shaped grilles similar to that used to distinguish the V-12-powered 750iL.

In Europe, the company claims the 730i does 0 to 62 mph in 8.5 seconds. The 740i is said to hit 62 mph in 7.4 seconds. Top speed for the 730i is posted at 145 mph. The 740i top speed is 150 mph.

The V-8-powered models will be in German dealerships in late summer, according to BMW AG. U.S. dealers should see the V-8-engined cars in late fall, a BMW of North America Inc. spokesman said.

Insiders at BMW speculate that some time late next year the company will offer a V-8 in the 5-series sedan. Outsiders say the 3.0-liter V-8 would make an interesting addition to the 2.5-liter six currently offered in the 3 series.

The new all-aluminum V-8s displace 3.0 liters, which provides 218 horsepower and 214 pounds-feet of torque, and 4.0 liters, with 286 hp and 295 pounds-feet of torque. The engine bank angles are 90 degrees. The cylinders breathe using two camshafts to activate two intake and two exhaust valves. Valve lash is handled by hydraulic tappets.

Mazda, Suzuki raise prices again

Mazda Motor of America Inc. last week announced its third price increase since the end of the 1991 model year, and American Suzuki Motor Corp. applied the second boost to its 1992 stickers.

Mazda placed price tags on two of its 1993 lines and added $700 to the 1992 edition of its 929 sedan.

The MX-6 and RX-7 coupes have been redesigned for 1993. Prices climbed $2,085 on the MX-6 base model and $720 on the LS. The RX-7 Turbo, the only 1993 in that line, is $4,200 more than the 1991 version. There is no 1992 RX-7.

Part of the increases on the MX-6 and RX-7 result from the addition of a driver-side airbag as standard. *Automotive News* estimates that the hikes on the 929, the MX-6 and the RX-7 amount to an average of $325 when spread across the full line of Mazda cars on a sales-weighted basis.

Last week's hike followed increases averaging $570, or 3.1 percent, last September and $125, or 0.8 percent, last October. The three actions have added an average of $1,020 to Mazda car prices.

That figure is expected to increase when the 1993 model 626 sedans go on sale this spring. Also, there was no mention last week of price revisions on other models.

Suzuki last week raised prices $100 on its Swift GA and GT hatchbacks and sedans. Samurai sport-utilities also went up $100, and Sidekick sport-utilities rose $100 to $150. Suzuki said the increases are due primarily to changes in the exchange rate.

PRICE INCREASES

	Current price	Increase
MAZDA		
MX-6 2-dr.	$15,550	$2,085
LS 2-dr. (V-6)	17,825	720
RX-7 Turbo 2-dr.	31,300	4,200
929 4-dr.	28,500	700

GM service test racking up gains

Gross profits rise 9% on average

PHIL FRAME
Staff Reporter

The General Motors dealers involved in a Columbus, Ohio, pilot program to boost customer service satisfaction have seen gross profits on service rise an average of 9 percent in three months.

The GM Goodwrench Service Plus program involves reorienting dealership service departments from high-priced warranty work to lower-priced but higher-volume maintenance work — the mainstay of independent shops.

The 14 participating dealers collectively invested about $350,000 in the campaign and many already are seeing a return, even though customer-directed programs didn't start until September.

"Many of these dealers have told us that they have recognized a payback in the first 90 days," said Richard Sherman, executive director of service marketing for GM's customer sales and service staff.

Sherman: goal is selling cars

Service Plus officially started when training of dealership personnel began last June. The element of the program aimed at customer retention started three months later and advertising began in December.

"Every dealer is realizing greater sales and more customers coming back," said Marty Zwolan, manager of service marketing.

The main elements of the program are:

- Pricing that is competitive with independent repair and maintenance shops
- Free alternative transportation for customers who can't wait for service
- Convenient hours
- A lifetime guarantee on parts and labor for most work.

GM developed a database of each dealer's customers. From that, recent new-vehicle buyers are invited to the dealership for a service orientation clinic so they can see the changes that have taken place.

The early results are encouraging, Sherman said.

Besides gross service profits going up 9 percent, the number of repair orders written at the 14 participating dealerships are up 9 percent, Zwolan said. The number of hours per repair order are up 25 percent, and the effective labor rate is up 20 percent.

Dealers also are seeing improvements in shop utilization, return on parts investment and technician efficiency, Sherman said.

There also has been a marked increase in the percentage of a dealer's customers who return to the dealership for non-warranty service — from 27.6 percent in November to 37.5 percent now.

Customer surveys show that the new business is coming from people who took their vehicles to independent shops, did the work themselves or didn't have it done at all, Zwolan said.

Eight of the 22 Columbus-area GM dealers decided not to participate in the program.

To participate, dealers must pay for training service department employees on how to change the shop environment to be more like an independent shop, Sherman said. There's also an internal investment in changing labor rates so that less-experienced technicians do lower-priced maintenance work while difficult, high-tech work is done by technicians at a higher labor rate.

Dealers pay for the alternative transportation offered to customers, and commit to paying for any labor claims related to the lifetime parts and labor guarantee, Sherman said. Dealers also incur the costs of opening their service department for longer hours and maintaining the customer database set up by GM.

The average cost for a dealer is $25,000, but the figure varies widely depending on the size of the dealer's customer base, Sherman said.

"We're giving them advertising support — significant, heavy advertising support," Sherman said. "We're giving them support on the parts pricing, with the customer management system, with the development of the service orientation clinic, and with the lifetime parts guarantee."

GM expects its return will come from increased vehicle purchases by customers who are overwhelmingly satisfied with the service they have received from their GM dealer, Sherman said.

Sherman doesn't flinch at the cost of offering the program nationally to GM's 9,000 dealers, but said it is too early for such a decision to be made.

"The better we can improve the service experience, the more likely we are to get a customer back who is thinking about repurchase," Sherman said. "That's what this is all about long term. There's a tactical piece, which is more service and parts business, but we're still in the business of selling more cars and trucks."

What's included

Service Plus involves 10 categories of service:

- Air conditioning
- Shocks/struts
- Cooling system
- Transmission
- Brakes
- Fuel delivery system
- Emission control system
- Ignition system
- Front-wheel drive
- Lube/oil/filter

Protected parts

Parts covered by the lifetime warranty are:

- Air conditioning accumulator, condenser and compressor
- Brake pads and shoes
- Constant velocity joint/boot seal kit
- Ignition module, coils, wire sets and individual wires
- Exhaust gas recirculation valve
- Fuel injectors, throttle body injectors and fuel pump
- New or remanufactured generators and starter motors
- Oxygen sensors
- Shocks and struts
- Water pumps

in brief
SERVICE

Subaru to fix rust problems

DETROIT — Subaru of America Inc. is recalling 147,000 front-wheel-drive cars that might be dangerously corroded by road salt.

The cars affected are three-doors, four-doors and coupes made from 1985 to 1987.

Continuous exposure to road salt could cause rear suspension damage, which might affect operation and control of the cars, the company said.

There have been no reported accidents or injuries.

The cars will be inspected and rustproofed if needed.

— *The Associated Press*

Honda recalls 175,964 Accords

TOKYO — Honda Motor Co. will recall 175,964 Accords because of a defect in the power steering mechanism.

The defective crank pulleys, which connect to the drive generator and pump for power steering, may cause loosening of a belt and prevent the battery from recharging, Honda said.

The cars include 159,533 Accords produced by Honda in Japan from Sept. 13, 1989, to Feb. 20, 1991.

About 97,600 of those cars were exported to 17 nations.

Also being recalled are 16,431 Accord coupes produced by Honda of America Manufacturing Inc. from Jan. 29, 1990, to May 13, 1991.

— *The Associated Press*

Service work up in Jan.

Parts and service business at new-car dealerships began the year on a positive note, rising from the volume recorded at the beginning of 1991.

As measured by the Automotive News Service Index, parts and service business in January was 102.2 percent of that in the same month a year earlier.

January was the second consecutive month in which the index topped the previous year.

The largest gain for the month was in shop parts sales, up 4.2 percent. Sales of all parts and accessories rose 4.1 percent, while total labor sales and gross profit on all labor and parts and accessory sales increased slightly.

Only repair orders written were off for the month, down 1 percent.

Dealerships that reported increased business cited more aggressive advertising, tighter rein on costs, increased labor rate and a push to increase CSI scores.

One dealership credited the addition of a part-time mechanic and helper trainee, while another noted that more of its customers opted for expensive repairs in lieu of buying a new car.

Dealerships that reported a decline in business generally tended to blame the recession. One respondent wrote, "No customers — no reason — recession?"

Figures used in the Automotive News Service Index are compiled from a cross-section of new-car dealerships.

SERVICE INDEX
102.2★

	Jan., '92 vs. Jan., '91
Gross Profit on All Labor and P&A Sales	+ 0.6%
Repair Orders Written	– 1.0%
Total Labor Sales (Customer & Warranty)	+ 0.8%
Shop Parts Sales (Customer & Warranty)	+ 4.2%
Sales of All P&A	+ 4.1%

★ Survey by Automotive News shows that dealers' service and parts business in January 1992 was 102.2 percent of business in January 1991.

Chrysler opens Atlanta parts center

HIGHLAND PARK, Mich. — Chrysler Corp. has opened a new 250,000-square-foot parts distribution center in Atlanta.

The center, located on a 40-acre site near Hartsfield International Airport, serves about 550 Chrysler-Plymouth, Dodge and Jeep-Eagle dealerships in eight Southeastern states.

It is Chrysler's 18th parts distribution center.

SPX, Prestone unveil recycling system

DALE JEWETT
Service Editor

WARREN, Mich. — SPX Corp. will build and market to auto dealers and service locations an automotive coolant recycling system developed by the maker of Prestone.

The system has two machines. One removes old coolant from a vehicle and replaces it in 12 to 15 minutes; the other recycles and reinhibits up to 40 gallons of used coolant in one hour.

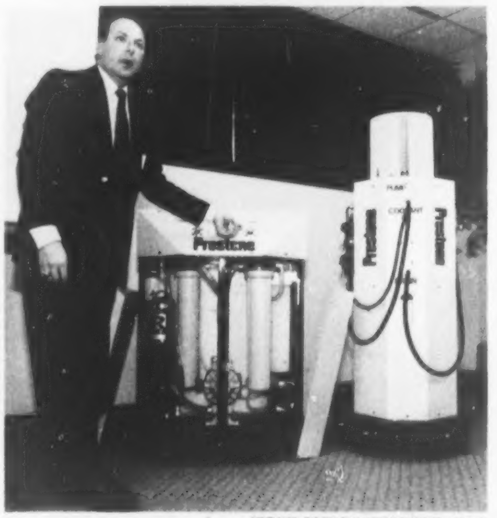
SPX's Robinair Division will build the machines, which will be marketed through the corporation's divisions, including Bear Automotive, Kent-Moore, Kent-Moore Tool and Equipment, OTC, and Robinair.

Their customers include the Big 3 and Hyundai, Isuzu, Mitsubishi, Nissan and Toyota.

The drain-and-fill machine is expected to be priced around $1,000, and the recycling unit will be priced between $3,000 and $4,000, said William Clogg, general manager of Robinair Division. The machines should be available this fall to coincide with the traditional coolant-changing season, he said.

Currently, 10 states regulate the disposal of used auto coolant, Clogg said, and several others are considering such regulations.

While the primary component of automotive coolant, ethylene glycol, is biodegradable, it picks up metals such as lead, zinc and iron from the engine's cooling system, said Tom Nathanson, vice president of technology for Prestone Technology Systems Inc.



JOE WILSSENS/AUTOMOTIVE NEWS

Prestone's coolant recycling and drain-and-fill machines are demonstrated by Tom Nathanson, vice president of technology for Prestone Technology Systems Inc.

About 200 million gallons of concentrated coolant are sold every year, Nathanson said.

The air-pump-driven recycling machine uses a proprietary Prestone system and a series of filters to separate and remove the contaminants. It uses Prestone chemistry to reinhibit the ethylene glycol, restoring it to coolant that meets SAE and American Society of Testing and Materials standards for new antifreeze.

The drain-and-fill machine will remove 90 to 95 percent of a vehicle's used coolant and refill the system with new or recycled coolant using the vehicle's water pump. The service technician does that by cutting the vehicle's upper radiator hose and installing an adaptor.

A service operation that charges $39 for a cooling system drain and refill would make a profit of about 50 percent, Clogg said.

GM, Chrysler thrive in Canada

JEREMY SINEK
Staff Correspondent

TORONTO — Canada was a profitable place for two of the Big 3 to build and sell vehicles in 1991.

While all three makers sustained big losses in the United States, General Motors of Canada and Chrysler Canada increased their profits last year.

And although Ford Motor Co. of Canada lost money, much of the company's 1991 deficit was caused by weakness in markets outside Canada.

GM reported net income of $323.3 million ($271.2 million U.S.), seven times as much as the $39 million it earned in 1990. Last year's sales were $19.3 billion ($16.2 billion U.S.).

George A. Peapples, GM of Canada president and general manager, credited the gain to cost-cutting programs, reduced reliance on incentives, higher option content in the vehicles it produced and reduced depreciation and amortization charges.

Relatively strong demand for the GM vehicles produced in Canada kept capacity utilization high.

GM's earnings rose despite a pre-tax restructuring charge of $131.8 million ($110.6 million U.S.) for the cost of closing the Scarborough, Ontario, van plant in the spring of 1993.

Ford of Canada blamed lower production and sales in North America and overseas for its loss of $209 million ($176 million U.S.) on sales of $12.2 billion ($10.2 billion U.S.) in 1991. In 1990, the subsidiary lost $57 million ($48 million U.S.).

In North America, a small increase in Canadian revenue was wiped out by a 16 percent drop in sales to Ford operations in the United States.

Ford's Canadian operations lost $85 million ($71 million U.S.), compared with a profit of $11 million ($9.2 million U.S.) in 1990.

Most of the loss — $123.5 million ($104 million U.S.) — was suffered by Ford of Canada subsidiaries in Australia and New Zealand.

Chrysler Canada's earnings more than doubled, to $34.2 million ($28.7 million U.S.), on sales of $8.3 billion ($7.0 billion U.S.).

Operating profits more than doubled, to $95.0 million ($80.3 million U.S.) from $37.6 million ($31.8 million) in 1990. Production rose 3.9 percent, to 406,893 vehicles, and retail sales rose 4.5 percent, to 207,571.

President G. Yves Landry attributed the strong performance to the effectiveness of Chrysler's massive cost-reduction program. The Canadian operation also benefitted from the success of minivans produced in Windsor, Ontario. ▰

BIG 3 RESULTS IN CANADA*

	1991	1990
GM	271.2	39.0
Ford	(76.0)	(48.0)
Chrysler	28.7	13.5

Trucks pull sales ahead in Canada

ANNE E. WRIGHT
and JEREMY SINEK
Automotive News

Sales of light vehicles in Canada inched ahead 0.8 percent in February, but car and truck results headed in different directions.

Trucks sales rose 15.4 percent over last year to 27,602, while cars slipped 5.4 percent to 53,486.

The year-to-year comparisons are skewed in part by a small sales boom in early 1991 that was sparked by the enactment of Canada's goods and services tax on Jan. 1. Fleet buyers delayed car purchases so they could take advantage of the lower prices.

For the first two months of this year, light-truck sales rose 11.2 percent, and car sales dropped 8.1 percent. The overall market was off 2.3 percent from 1991.

General Motors was the only Big 3 maker to post higher car and light-truck sales for both February and the year-to-date. February sales were up 9.1 percent, pushing GM's car and truck sales 2.5 percent ahead for the year. In trucks alone, GM was up 13.5 percent.

Stew Low, a spokesman for GM of Canada, attributed the truck gain to incentives. "In January, February and early March last year, there was very little incentive activity in trucks in particular," he said. "This February, in virtually all the segments, there were very competitive incentive programs."

Chrysler Canada sold 7,991 trucks in February, an increase of nearly 19.0 percent over 1991 and a record for the month. But Chrysler's car sales slipped 13.9 percent in February.

Ford Motor Co. of Canada reported increases in cars and trucks for February and an overall 7.8 percent gain. Though Ford truck sales were up 19.1 percent for two months, slipping car sales left the firm 1.1 percent behind 1991.

Norm Clark, president of Canada's Motor Vehicle Manufacturers Association, sees the truck trend as another sign of economic recovery.

"Going into the recession, the truck market probably dipped earlier than the car market," Clark said. "It may be coming back a bit quicker." ▰

CENSUS

Biggest dealership drop since 1982

continued from PAGE 1

was reduced to 628 by a change in the number of intercorporate duals. Those are dealerships handling the cars of two or more of the Big 3 in the same showroom.

The GM and Ford dips were the largest since 1982; Chrysler's was the stiffest since 1980.

Chrysler's dealership total has declined two years in a row after seven consecutive gains that followed its brush with death in the early 1980s.

The import-only stores fell to 5,012 on Jan. 1, down from 5,288 a year earlier.

The 5,012 consist of 3,941 exclusives, which handle a single imported make, and 1,071 duals, which stock a combination of imported lines but no Big 3 makes. Both totals are down from a year ago.

Although most of the Japanese-brand dealerships handle cars built in the United States and Canada by transplant operations, those dealerships are counted under the import banner.

All figures listed in this article and in the accompanying tables refer to the net change in dealership totals.

On Jan. 1, the Big 3 had 18,356 dealerships, down 3.3 percent from 18,984 a year earlier. The import-only total of 5,012 was down 5.2 percent.

BIG 3 LOST 345

The first half and second half were turnabout situations for the two segments.

The Big 3 lost 345 dealerships in the first half and cut the attrition to 283 in the second. The import-only stores showed a gain of 17 in the first half and a loss of 293 in the second.

The reason for the 1991 falloff is obvious. Big 3 car sales in 1991 dropped 14.2 percent from a lackluster 1990, and profit was only a word in the dictionary for most retailers. Many dealerships failed, or their owners decided it was time to run for their lives.

Also, the Big 3 decided it wasn't absolutely necessary to fill every open point in these days of depressed sales.

Sales of Japanese cars dipped only 4.4 percent, but the Europeans took a bath with a plunge of 26 percent from 1990.

2 MAKES EXIT U.S.

Two imports withdrew from the U.S. market last year, but the departure of Peugeot and Sterling had little effect on dealership totals.

Only 32 of Peugeot's 151 dealerships and none of Sterling's 124 were exclusives. The rest were part of dual outlets that kept operating.

Many of the Peugeot and Sterling spots continue to provide parts and service for those makes, but they are not counted as new-car franchises because they do not sell new cars.

Last year brought the third consecutive downturn in car sales, and those three years have cost the auto industry 1,545 new-car dealerships. The dip of 189 in 1989 was followed by 452 in 1990 and 904 last year.

The doldrums of the early 1980s exacted a much heavier toll on dealers — 1,558 in 1980, then 633 in 1981 and 974 in 1982 for a three-year drop of 3,165.

19 IMPORTS LOSE DEALERS

Apparently, the survivors of the decade-ago washout are stronger and better able to cope with a protracted period of depressed sales.

On the franchise side, 19 of the 31 imported makes in the census lost dealers during 1991.

Aside from the wipeouts of Peugeot and Sterling, the biggest loss was suffered by Porsche, down 40.

Declines of 20 or more franchises were reported by Volkswagen, Audi, Saab, Daihatsu, Maserati and Alfa Romeo.

Daihatsu has announced that it will withdraw from the U.S. market at the end of the 1992 model year.

Ten imports added franchises last year, with Hyundai posting the biggest gain.

The South Korean make boosted its total by 73. Eight of the gainers were Japanese, led by a 44-outlet pickup by Suzuki.

Among the domestics, Saturn, up 76, and Eagle, up 67, reported the only increases.

Chevrolet and Ford, the largest dealer organizations, took the biggest hits. Chevrolet lost 150 franchises, and Ford lost 134. The lightest losses among the domestics were recorded by the two most expensive Big 3 cars, Lincoln (15) and Cadillac (20).

Both the imports and the domestics have more than twice as many franchises as dealerships, which emphasizes the importance of dualing in the retail auto industry.

The 11,005 import franchises (excluding captives) result in 5,012 dealerships handling only imported cars. The 38,482 Big 3 franchises provide a network of 18,356 dealerships.

95 PERCENT HAVE IMPORTS

At the beginning of this year, an imported car could be purchased at an estimated 22,164 of the 23,368 new-car dealerships in the United States — 95 percent.

That is largely because of the captive imports handled by the Big 3.

A captive is a line that is sold only by the Big 3 company or division that imports it. All Ford Motor Co. and all Chrysler Corp. dealerships stock captives. So do all Pontiac dealerships and 89 percent of the Chevrolet dealerships. *Automotive News* estimates that 16,167 Big 3 stores carry a captive.

Domestic duals with independent imports (with no captive involved) also are included in the number of outlets at which an imported car can be purchased.

Loss of 904 dealerships in '91 wasn't industry's worst year

JOHN K. TEAHEN JR.
Senior Editor

Although the auto industry in the United States lost 904 dealerships last year, that decline was no worse than 13th on the Retailers' Roll of Agony.

Since World War II, the annual loss has exceeded 3,000 establishments on two occasions and has topped 1,500 on seven others.

In that period, the dealer total has plunged from 45,580 in 1947 to 23,368 at the beginning of this year, a drop of 48.7 percent. There has been a decline in 38 years; a rise in only seven.

The wildest swings occurred during the decade following the war when the manufacturers were trying to get their retail organizations back in shape. Five times from 1947 through 1956, the industry lost 1,500 or more dealerships. Twice, the toll was more than 3,000, including a peak of 3,281 in 1953.

But that decade also brought the biggest gain of the postwar era — 3,081 in 1948.

Only three of the heaviest losses have occurred since the mid-1960s. The recession of the early 1980s was vicious. It cost the industry 1,558 dealerships in 1980 and 974 in 1982. Last year's dip of 904 was the final member of that triumvirate.

Economic recessions have been a major reason for the steepest declines since the mid-1950s. Also, several domestic makes (Nash, Hudson, Kaiser, Willys, Studebaker, Packard, DeSoto, Edsel) have left the arena. And dozens of imported nameplates have come and gone. Each had an effect on dealer totals.

The table accompanying this article lists the biggest yearly losses in new-car dealerships in the United States since World War II.

Figures through 1957 are for domestic makes only. Figures since 1958 include both domestics and imports. That is when imported cars became an important factor in the U.S. market.

THE ROUGHEST YEARS

Biggest losses of new-car dealerships in the United States

Year	Loss

Saturn outlets post highest sales average

KAREN DETKOWSKI

Statistician

In February, sales-per-dealer averages increased for 28 makes and declined for only three, according to *Automotive News* sales-per-dealer calculations.

Saturn dealers were on top again, just as they were in January. Sales are increasing faster than the network of dealerships, contributing to an increase in Saturn's sales-per-dealer score. For February, it was 103 units, up from 83 in January.

Lexus dealers also had good news. An 8.2 percent increase in February sales showed up as 12 more sales per dealer than in January.

"The last weekend in February was our best of the year," said Lexus general manager J. David Illingworth.

'More of the people who are shopping are buying."

All makes in the top 10 increased their sales-per-dealer averages in February.

Only Volvo, Suzuki and Yugo sold fewer new vehicles per outlet than in January.

Volvo attributed its decline to a low consumer confidence index that reduced shopping and purchasing activity.

A spokesman said a delay in shipments from Canada delayed retail deliveries as well.

Although sales of Suzuki's Swift subcompact increased in February, sales of its Sidekick and Samurai sport-utilities were off 18.7 for the month. ■

Interest rates hurt Korean earnings

Hyundai off 20% despite rise in sales

OLES GADACZ

Staff Correspondent

SEOUL — Hyundai Motor Co., South Korea's biggest vehicle maker, said last week that 1991 net income dropped 20.4 percent from a year earlier despite robust increases in revenue and worldwide unit sales.

Hyundai attributed the profit decline, to 53.76 billion won (about $72.6 million at current rates), to sharply higher borrowing costs last year. The industry's second biggest producer, Kia Motors Corp., also said late last month that high interest rates had hurt its 1991 earnings.

Hyundai said worldwide revenue jumped 20 percent last year, to the equivalent of $7.57 billion, as domestic sales and exports continued strong.

Passenger-car sales increased 14.1 percent, to 640,628 units, generating revenue of $4.95 billion, the company said.

Propelled by the new Elantra and opening of new markets in Germany, Eastern Europe and Scandinavia, passenger-car exports climbed 10.7 percent to 253,856 units, Hyundai said. Exports generated $1.5 billion in revenue, Hyundai said.

Domestic passenger-car sales rose 16.4 percent to 386,772 units, and generated $4.95 billion in revenue, Hyundai said.

While competitors were hit by a softening of the domestic market for commercial vehicles in 1991, Hyundai said its truck and bus sales rose 7 percent to 125,817 units. Exports, at 485 units, were negligible.

Two other vehicle makers also reported last week.

Asia Motors: Unit sales for the fully owned subsidiary of Kia Motors were virtually unchanged from the year before, at 54,145, but revenue rose 11.8 percent to the equivalent of $1.3 billion.

Net income fell 20 percent to $14 million, the company said.

Bus and van sales held steady at 10,857 units while truck and specialty vehicles sales dropped to 32,986 and 4,877 units, respectively. But sales of the company's sport-utility, the Rocsta, rose 49 percent to 5,425 units.

Ssangyong Motor: A producer of sport-utilities and commercial vehicles, Ssangyong sales rose only slightly in 1991 due to sluggish demand for trucks and buses and the entry of new competitors into the 4x4 segment.

Turnover rose just 6.5 percent in 1991 compared to 60.9 percent in 1990, to reach $543 million, the company said.

Net income improved to $12.6 million, representing a gain of 60.9 percent over 1990 earnings.

Unit sales rose 6.6 percent, to 24,173 units, Ssangyong said.

But demand for the company's Korando 4x4 sport-utility slowed as customers found alternative offerings in Asia Motors' Rocsta and Hyundai Precision's Galloper.

Nevertheless, over half of the company's 1991 revenues were generated by the Korando. Sales of the 4x4 rose 8.1 percent from a year earlier to 20,486 units. ■

Hyundai credit lines restored

SEOUL — In an apparent signal that the government has loosened its chokehold on the Hyundai Group, banks and regulators last week permitted the huge conglomerate to resume raising funds via new bond issues and to make new investments using bank loans.

Following a squabble over taxes between Hyundai founder Chung Ju-Yung and the government, financial regulators early this year shut the group off from its major lines of credit. It was then forced to raise capital on more expensive secondary markets and to take out costly short-term loans.

The squabble took a new turn in January, when Chung announced plans to form a new political party.

Despite the sometime bitterness of the dispute between Chung and tax authorities, bankers and analysts here agree that the government is unlikely to sanction measures that would damage Hyundai's financial health.

Hyundai ranked as the country's top exporter in 1991, shipping an estimated $7.7 billion worth of products abroad — nearly 11 percent of the nation's total.

Auto exports accounted for $2.5 billion of the total.

Hyundai's largest exports were ships ($2 billion) and cars.

Despite the tax squabble, Hyundai was ranked as the most successful bidder for government-financed projects in 1991, topping the list with 87.7 billion won ($118.5 million) worth of public works. Hyundai placed 11th in 1990 with 51.9 billion won.

Diamond-Star begins management changes

LINDSAY CHAPPELL

Staff Reporter

A management shift has begun at Diamond-Star Motors Corp. now that founding partner Chrysler Corp. is out of the picture.

With Mitsubishi Motors Corp. now owing 100 percent of the assembly plant in Normal, Ill., an evolutionary transition is planned in management structure and personnel, said Tsuneo Ohinouye, Diamond-Star's president and chief executive officer.

Last week, Diamond-Star named Kohei Ikuta executive vice president of corporate planning, administration, and sales and marketing.

The new position is intended to bring the plant closer to Mitsubishi's U.S. sales arm, Mitsubishi Motor Sales of America Inc. Since 1987, Ikuta had been North American general manager in Mitsubishi Motors Corp.'s Office of International Business.

Ikuta will serve on Diamond-Star's board of directors.

Until Chrysler sold its 50 percent interest in the company last fall, half of Diamond-Star's eight-man board consisted of Chrysler appointees. Now, the board has seven members, all Mitsubishi appointees.

Ikuta will coordinate interaction between the assembly plant and Mitsubishi Motor Sales of America, as well as Chrysler, which remains a customer. He also will assist in export operations, an area Diamond-Star hopes to expand, Ohinouye said.

Ohinouye indicated that other changes are planned for the plant but he did not specify: "We may have to think about modifying our organization a little. It won't happen in a broad area. But our management area will change as some of us go back to Japan. Some will retire.

"We don't expect drastic change," he added, "just minor modifications to the structure. The major segment of the organization will remain unchanged."

FEW CHRYSLER MEN LEFT

Fewer than a dozen Chrysler employees remain at the plant, which builds the Mitsubishi Eclipse and Mirage, and Chrysler's Eagle Talon, Plymouth Laser and Eagle Summit.

Chrysler appointee Donald Shoene, executive vice president of finance, retired late last month and was replaced by Katsuhiko Kawasoe, executive vice president of human resources.

Ohinouye said that when Chrysler begins supplying Diamond-Star with engines and transmissions in the mid-1990s, other Chrysler personnel could be brought into the Diamond-Star organization.

Chrysler's $100 million sale of its Diamond-Star interest last year included various production agreements and a commitment to supply Chrysler with Diamond-Star vehicles through 1998.

The transplants traditionally rotate their Japanese personnel out of a plant after five years. A number of Mitsubishi personnel who helped build and launch Diamond-Star will reach the five-year point next year.

"Some of the successors will be younger and be positioned differently," Ohinouye said. "That could result in some kind of management change."

A plant spokeswoman said that about 50 Japanese personnel from Mitsubishi are currently on assignment at the company, not counting a larger number of technical advisers who work at the plant for short periods. ■

Subcompacts, luxury cars shine for imports

KRISTINE STIVEN BREESE
Staff Reporter

Sales of imported cars outpaced the overall car market in February. Imported units rose 6.4 percent while combined sales of imported and domestic cars jumped 4.7 percent.

Subcompacts were a bright spot. And there was also some healthy movement in luxury car sales.

Nissan's subcompact Sentra enjoyed a a 28.3 percent increase in February. While U.S.-built Sentras showed a modest 6.6 percent gain, sales of imported Sentras more than doubled.

Sales of Toyota's least-expensive car, the Tercel dropped 7.5 percent in February.

But Corolla sales jumped from 12,689 in February 1991 to 15,882 last month, a gain of 25.2 percent. Sales rose for both imported and U.S.-built Corollas.

Honda Civic sales were up 24.6 percent, with imported and domestic Civics contributing to this year's gain.

Like its rivals, Honda has been relying more on domestic-built cars and decreasing its dependence on imports.

Mazda also had success in the subcompact segment.

Sales of its Protege jumped 116.1 percent last month to 5,230.

But Mitsubishi's Mirage dropped 62.7 percent below last February's total.

The Mirage is due to be replaced this fall.

And even Daihatsu, which announced in February that it will from the U.S. market at the end of the 1992 model year, posted an increase. Sales of its Charade subcompact rose 143.3 percent for the month.

Sales of luxury imports also picked up.

Lexus, Acura, Audi, BMW, Infiniti, Jaguar, Mercedes-Benz and Porsche all posted gains compared with February 1991.

Lexus Division of Toyota Motor Sales U.S.A. Inc. now has three models in its lineup that weren't available a year ago.

The Lexus SC400 and SC300 coupes added 2,372 incremental units to total sales of last month. The ES300 sedan boosted sales of Lexus' entry-level model to 3,115 units, 89.2 percent better than its prededessor, the ES250, did last February.

Lexus sales in February totaled 8,748, up 97.2 percent over 4,299 in 1991.

Sales of Mercedes' 190 and 300 series and the new S-class improved for the month.

The Mercedes S-class total was 1,188 units, 67.6 percent better than last year.

BMW's 3 series did well, with sales up 22.6 percent. The 5 series and 7 series also picked up. But sales of the 850i coupe totaled only 116, down 41.7 percent from last year.

Acura was up only 56 units for the month, an increasse of less than 1 percent.

The Integra, Legend and NSX were down from last year, but the Vigor picked up the slack. The Vigor went on the market last spring. AN

M-B slips in study of quality perception

PRINCETON, N.J. — The Mercedes-Benz name delivers less of a wallop than it did a couple of years ago, but it still is one of the 10 strongest brand names in terms of consumer quality perception.

That is one of the findings of the third annual Equitrend "brand equity" study conducted by Total Research Corp. of Princeton, N.J.

In the study, consumers are asked their quality perceptions of products and services they are regularly exposed to.

Mercedes-Benz placed seventh this year; it was third in 1991 and first in 1990.

Topping the 1992 list are Disney World/Disneyland, followed by Kodak.

The automotive brand with the second best quality image is Cadillac, which placed 32nd on the list.

Equitrend measures the quality perception of 147 brands in 48 product categories.

The study is based on the premise that aside from price and distribution, consumer perception of quality is the most powerful factor in brand success or failure.

The results are based on telephone interviews of a national sample of 2,000 people age 15 and over.

The survey was conducted in January and February 1992. AN

Workers' ideas help GM save $488 million

DETROIT — General Motors' employee-suggestion plan resulted in net first-year savings of more than $488 million in 1991, despite depressed production and sales levels, the company announced.

GM said it paid $72 million to employees who submitted more than 211,000 suggestions last year.

GM President Lloyd Reuss said the plan plays an important part in helping the automaker step up efforts to become more competitive this year.

Since the plan's creation, GM has realized nearly $6 billion in net first-year savings and paid out more than $925 million to employees.

The program marked its 50th anniversary March 7. AN

Inventories shrink to 77 days

JIM HENRY
Staff Reporter

The industry's supply of cars and light trucks shrank to 77 days as of March 1, down from 87 a month earlier.

Relatively strong sales in February helped reduce the stockpile, despite stronger production schedules at most U.S. assembly plants.

Car stocks fell from 85 days to 70. The domestic supply was 64 days; the import stock was 90.

Light-truck supplies declined for individual models but held at 90 days, just one less than on Feb. 1. Domestics (90 days) and imports (91) were even in days' supply.

Stocks of the Jeep Cherokee declined from 63 to 58 days, for instance, as Cherokee sales jumped 69.7 percent for the month. Chrysler Corp. light trucks greeted March with a 79-day supply, compared to 88 days on Feb. 1.

Inventories fell for each of the Big 3, after swelling in January.

Chrysler Corp.'s stock of light vehicles dipped from 89 days to 80 days.

Ford Motor Co. dropped from 89 days to 71, and General Motors from 97 days to 81.

Daihatsu America Inc., which announced last month that it is ceasing imports, shrank from a 51-day supply to 32 days. Daihatsu sales in February jumped 180 percent over January.

Inventories also fell for the biggest Japanese-based companies. American Honda Motor Co. Inc. had a 69-day supply on March 1, down from 76 on Feb. 1. Its Acura Division was fat by comparison, at 104 days.

Nissan Motor Corp. in U.S.A. weighed in at 107 days, down from 120. Toyota Motor Sales U.S.A. Inc. had a 31-day supply, down from 44 days.

TRUCKS

Ford, Toyota eye new segment

continued from PAGE 1

Jeep Comanche. They accounted for about 89,000 sales a year, most of them Dakotas.

A Ford entry would mark an ironic twist to Toyota's on-again, off-again plans for the segment. Toyota's U.S. executives, led by Executive Vice President Robert McCurry, had long talked about their hopes of entering the full-sized segment.

When Toyota announced last March that the project was on hold, the company also said the model would be smaller than a full-sized truck. It was widely believed that Toyota scaled back its plans out of fear of attacking Detroit's last exclusive bastion of profitability.

Now, Ford sources indicate that a mid-sized Ford entry would be a response to Toyota's plans for the segment.

"We're certainly paying attention to the Toyota rumors," Allan Gilmour, president of the Ford Automotive Group, said last month. Gilmour would not say whether Ford was working on the truck.

A group of Ford designers met with Gilmour in January, saying that Ford would be kept out of a potentially lucrative segment if Toyota offers a mid-sized entry. Dealers have also told Ford that they want to bolster their current lineup by adding a cross between a full-sized and compact pickup. It would have more car-like handling and possibly be derived from an F-series platform.

Few details are known about either the Ford or Toyota models. But sources say Toyota's entry will likely carry a V-6 engine initially, with a V-8 option possible as soon as the 1994 model year. It is also expected to be like a full-sized pickup in its ability to carry a 4-by-8-foot sheet of plywood between the wheel wells. The existing mid-sized trucks carry such loads above the wheel wells.

HANS LEHMANN/HIDDEN IMAGE

Toyota's pickup is expected to be similar in size to the Dodge Dakota.

Toyota executives in the United States have said that annual volume would be in the 80,000-unit range. Toyota Motor Corp. spokesman Andrew Pheiffenberger in Tokyo characterized reports of 100,000 annual sales as "too much."

Pheiffenberger said the model will be built in Japan at first. If so, it would be subject to the 25 percent U.S. tariff on imported pickups.

But Pheiffenberger added that Toyota also will explore assemblying the model in the United States. Last year, Toyota began building compact pickups at its New United Motor Manufacturing Inc. joint-venture plant in Fremont, Calif.

Toyota's confirmation surprised some insiders. Japanese trade tensions are much higher now than they were a year ago, when the company announced the project had been put on hold.

Indeed, the drama surrounding the pickup has been commonly cast as a battle between McCurry's ambitions and more politically sensitive considerations in Tokyo.

That was reflected again last week.

A spokeswoman in Torrance, Calif., said, "Toyota will have a new intermediate-sized pickup truck sometime in the 1993 model year, and it will be built in Japan."

But in Tokyo the language was much more guarded.

"We are moving ahead with preparations on an intermediate-sized pickup on the assumption that we can do something in 1993," said Pheiffenberger.

"However, no final decision has been made. Toyota is still studying a number of factors, including the economic conditions in the U.S. market, and also the current (political) mood."

The words on the record

A larger pickup has been an on-again, off-again gleam in the eyes of Toyota Motor Sales U.S.A. executives. Some key comments during the last 18 months:

- **September 1990** — Robert McCurry, executive vice president: Any larger Toyota pickup Toyota builds won't arrive for at least two or three years. Ford Motor Co. and General Motors are too solidly entrenched in the full-sized market for Toyota to capture their customers. Toyota's entry would give owners of Japanese pickups something to move up to.
- **January 1991** — McCurry: a decision is due within 60 days.
- **February 1991** — Al Wagner, senior vice president: "There's no question we're planning a large truck, it's just a matter of when."
- **March 1991** — Toyota: a soft market and uncertain economy have forced an indefinite delay. The pickup will be between a compact and a full-sized model.
- **October 1991** — George Borst, vice president: A decision on a larger pickup is due "soon."
- **March 1992:** Toyota: Mid-sized pickup will go on sale during the 1993 model year.

Mid-sized truck segment measures up

In the past, *Automotive News* has divided pickups into just two sales categories: full-sized and compact. However, it is fairly easy to rejuggle the lineup to find a mid-sized segment made up of Dodge Dakota and Jeep Comanche.

The Dakota has a natural claim to the segment, being Dodge's middle offering between the Ram 50 and Ram 150, and the company calls it mid-sized in its marketing. Comanche, which gets little marketing support, is a tad bigger than Dakota in most dimensions and much smaller than the full-sized offerings.

Joining the little Dodge in the compact category are the Chevrolet S-10 and its GMC clone, the Ford Ranger, and pickups from Isuzu, Mazda, Mitsubishi, Nissan and Toyota. The average base-model wheelbase is 106.0 inches, and all models in the category are within 3 inches of that.

The average wheelbase for the two base-model mid-sized trucks is 112.6 inches.

At the full-sized end are the Ford F series, GM's C/K and Sierra clones, and the Dodge Ram 150. Their average base-model wheelbase is 116.4 inches.

Wheelbase alone can't determine segment, because a given nameplate has longer variations. In fact, the longest version of a compact pickup, the Ford Ranger SuperCab, has a longer wheelbase (125.0 inches) than any of the standard-model full-sized machines.

However, width is an excellent tool since it changes little with different versions of the same chassis, and there are no overlaps between classes. Entries in the compact class clump around their average width of 65.7 inches. The mid-sized average is 70.6 and the full-sized average is 78.4.

digest

HIGH COURT SLAPS GM, FORD

WASHINGTON — The U.S. Supreme Court has unanimously upheld a 1987 Michigan law that will require General Motors and Ford Motor Co. to repay some $25 million in withheld workman's compensation to employees injured before March 1982. The court rejected the automakers' arguments that the Michigan law abused their due process rights.

In this case, the auto companies had reduced workman's compensation payments by the amount the workers received in other benefits.

Ford's share is $7 million plus interest, which will go to 270 workers. The company said the decision retroactively increases workman's compensation rates for 1982 through 1987.

REPORT: U.S. NOT SO OPEN

WASHINGTON — The Bush administration has opposed bills in Congress to limit Japanese auto imports, saying it is firmly committed to a policy of open markets. But the rest of the world doesn't see the United States as open, according to a new report from the staff of the General Agreement on Tariffs and Trade, the 103-nation world trade organization headquartered in Geneva.

The report said the United States has been one of the most frequent users of anti-dumping and countervailing duty actions, forms of protectionism aimed at keeping cheap imports out of the country. For example, the number of anti-dumping investigations doubled last year, the trade group said.

Between 1988 and 1990, the U.S. Commerce Department ruled in almost every case — 68 out of 71 — that dumping was occurring, the report said. The result: Foreign manufacturers hold back products or price them higher.

FORD HIKES MEXICO WAGES

HERMOSILLO, Mexico — Ford Motor Co. has given workers at its Escort/Tracer assembly plant here an across-the-board 15 percent wage increase as part of a new two-year labor contract.

The agreement was ratified last week by the plant's 2,100 hourly workers and is retroactive to March 1.

A Ford spokesman said the contract also grants some adjustments in plant benefits, but said details were not yet available.

The Hermosillo plant exports Escorts and Tracers to the United States.

Ford's Mexican plants negotiate new contracts every two years, and conduct wage talks annually.

The spokesman said the 15 percent increase is "on a par with what industries have been paying there." A separate wage contract will expire later this month at Ford's manufacturing complex near Mexico City.

GM WINS SAUDI CONTRACT

PONTIAC, Mich. — The U.S. Army awarded a $25.7 million contract to General Motors' Truck and Bus Group to produce military vehicles for Saudi Arabia. GM will produce 600 trucks with a chassis-style cab with an ambulance body, the Army said.

HUNGARY ROLLS OUT ASTRA

SZENTGOTTHARD, Hungary — The first Opel Astra built in Hungary was completed last Friday. Initially, annual car assembly on one shift is planned at approximately 15,000 Astra units. In July, the production of gasoline engines for Opel and Vauxhall cars will begin at the Szentgotthard plant, with an annual capacity of over 200,000 units.

OUTSOURCE

Small firms build 22.5% of cars for Japan's Big 6

continued from PAGE 3

from subcontracting in the automotive industry were reduced labor and capital costs.

But in the end, he said, the Japanese were able to claim the most important benefit of all from the outsourcing system — faster technical change.

"While the U.S. industry was locked into rigid union rules and sluggish management, subcontracting permitted the Japanese auto firms to tap the entrepreneurial abilities of suppliers," Smitka said. "This was central to how the Japanese 'did it.' "

Japanese executives say the system goes back to the early postwar period, when the industry was regrouping.

"We established these companies to help each other mutually with development and technology," Toyota Chairman Eiji Toyoda said in a recent interview.

"The work involved different categories of jobs. It was not efficient for everything to be done by one company. We felt it was more efficient to establish separate companies for small volume work."

Toyota, which uses a network of eight independent subassemblers, produced 1,823,100 vehicles outside its own plants in Japan last year — 45 percent of total output.

Hirosuke Terada, Toyota's general manager of planning and production control, said subsidiary assembly work provided part of the "driving force" for the company's postwar expansion.

"It would have been difficult for one company alone to make such drastic changes," he said.

DOES SYSTEM IMPERIL QUALITY?

Toyoda said the system offers some advantages, particularly in difficult times "when we can help each other." But there also are disadvantages, he conceded, although he declined to cite any.

According to Krafcik and others who have studied the system, however, the dangerous downside to the system is quality control — outsourced vehicles tend to have more problems than those produced in-house.

In Toyota's case, for example, J.D. Power & Associates ranks the Previa minivan as having 132 defects per 100 vehicles in its 1991 Initial Quality Survey, which is conducted during a vehicle's first 90 days of ownership. The Previa is produced by Toyota Auto Body Co., a partly owned affiliate.

The Previa rating compares unfavorably with Power's average rating for all Toyota products — 90 — and is 85 points worse than Toyota's top-rated model, the Lexus LS400. The MR2, another farm-out that is assembled by Central Motor Co., is ranked by Power as having 119 problems per 100.

On the other hand, Toyota's lowest-rated product — the Supra, with 133 problems per 100 — is produced in one of the company's main plants.

Not surprisingly, Toyota insists there is no difference in quality between cars built in the main plants and the subsidiaries.

"Quality is quite the same," Terada said. "Others may express concern that quality is less, but I would deny that concern. Standardization of quality is applied to each plant."

But Honda Motor Co. Executive Vice President Shoichiro Irimajiri concedes that quality can be a problem if the subassembler is not firmly controlled.

"If production is kept simple, the system will work very well," he said. "If it becomes complex, varieties develop in the plant, staff is added and the advantage will disappear."

Honda works at keeping it simple. It assigns production of mini-vehicles (engines under 660cc), including the two-seat sporty Beat, to Yachiyo Industry Co., a Honda-related parts maker for 30 years that graduated into body assembly work eight years ago.

Honda owns a 40.3 percent interest in Yachiyo.

"The biggest advantage in such a system is reduced costs and small overhead," Irimajiri said.

In developing light-weight vehicles, he said, "cost competitiveness is a first priority."

At Honda's plants, 25 to 30 percent of the work force are non-line staff. But at Yachiyo, which employs 2,119 workers, only 10 percent are administrative staff.

"It is a lean organization," Irimajiri said.

But out-sourcing is not so useful when a quick model change is required, he said.

"When the engine has to be developed at the same time and simultaneous engineering is necessary, we can work together if it is in-house. Outside work can be more difficult," Irimajiri said.

SHORT-TERM ADVANTAGES

Nissan Executive Vice President Atsushi Muramatsu also said the system has a downside.

"If the volume is small and for a short period of time, there is an advantage," he said. "But for regular mass production, you cannot guarantee quality."

Muramatsu sees "no great advantage" to the system other than the historical motives.

"Wage levels may be lower for the subcontractors, but they face the same labor shortage," he said.

In terms of raising money, he said, the costs are higher for the subcontractors, "and eventually that cost comes back to us."

But the "eventually" part may be the final advantage.

"If the parent company wants to minimize fixed costs and reduce risks in event of a downturn, they can allow the fixed costs to accumulate at the subcontractor," said Ben Moyer, who follows the industry for Merrill Lynch in Tokyo.

"It allows for a better productivity figure, a lower break-even point, assuming labor costs are counted at a fixed percentage, and a better productivity per employee ratio," Moyer said.

Toyota's subcontract assemblers, for example, tend to operate on a lower profit margin than Toyota, Moyer said.

IRS

Service-pact ruling ensnares imports

continued from PAGE 1

program, Mazda's dealers were principals so they could be vulnerable to IRS audits. Petrizzo said he is unaware of any dealers who have been audited.

"We are looking into the old contract and its implications for our dealers," he said.

Ford, which had a similar program until 1989, has said it will pay the interest assessed on dealers who are audited on sales of its extended service contract from 1985 to 1989.

Dealers selling extended service contracts from General Motors and Chrysler Corp. are unaffected by the IRS ruling.

The interpretation by the IRS turns on whether the dealer is primarily obligated to customers or whether the obligation is between the manufacturer and the customer or the insurer and the customer.

Ford triggered the issue by changing its extended service contract program in 1985 making dealers the principals even though the program was insured by the subsidiary American Road company.

Under pressure from the IRS and dealers, Ford removed dealers as principals under the program in 1989. But by then, the IRS had already begun auditing Ford dealers.

The National Automobile Dealers Association, Ford and several independent extended service contract administrators opposed the ruling. But in February, the revenue service issued a technical advisory on a test case in Ohio reiterating its position.

David Roberston, who is coordinating lobbying efforts on behalf of two extended service contract administrators, estimates the IRS ruling could push 10 percent of the nation's dealers out of business.

Even NADA executive vice president Frank McCarthy concedes that some dealers are at risk.

The IRS assessed one dealer $500,000 while other assessments have ranged from $100,000 to $200,000, according to NADA and other sources.

More than 160 Ford dealers have been audited by the IRS so far. Dealers in Washington and Oregon have been special targets.

The Washington State Automobile Dealers Association is surveying dealers on whether they will contribute to a fund to research legal options.

Dealers believe the IRS plans to audit every dealer in the state.

Janet L. Cunningham, executive vice president of the Washington association, said the IRS is auditing "tons of dealers, not just big dealers but dealers in out-of-the-way places."

Toyota said it is reviewing the IRS decision and how it will affect dealers. Most of the audits of Toyota dealers have been in Washington and Oregon.

"We are studying alternatives," said the Toyota spokesman. "It is our desire that our dealers and customers have the best extended service contract program — one that relieves the dealer from this tax situation yet complies with state insurance regulations governing the sale of this product."

Mark Miller, owner of Mark Miller Toyota in Salt Lake City, said the issue as it concerns Toyota dealers first emerged at the NADA convention last month.

"I certainly hope Toyota will change the extended service contract and help dealers," he said. "They need to change the contract or dealers will stop selling it."

Meantime, independent administrators of extended service contracts fear the ruling will drive them out of business by making their programs noncompetitive with factory programs.

Dealers are usually the principal under the terms of extended service contracts offered by independent companies.

Robertson said 50 percent of the nation's dealers sell extended service contracts from independent administrators and 95 percent of them use accounting methods contrary to the IRS advisory.

Ironically, the government doesn't gain any additional revenues by requiring dealers to amortize the expense of the contract over the life of the agreement, rather than in the first year.

However, Robertson estimates that the government could raise $10 million in back taxes, penalties and interest by auditing dealers.

Robertson met with government officials last week in a last-ditch lobbying effort for legislation to change the the IRS' interpretation of the tax code or to insert into the code language that exempts dealers from the prepayment of premiums rule.

The best he can hope for now is that the President's Council on Competitiveness recommends a moratorium on the advisory under President Bush's 90-day moratorium on regulations.

GM's debt rating falls a notch

NEW YORK — Standard and Poors last Friday downgraded its debt ratings for General Motors and some subsidiaries.

The rating agency cited GM's "massive losses, higher debt levels and growing unfunded pension and retiree medical liabilities."

Standard and Poors lowered its ratings on the senior debt of General Motors, General Motors Acceptance Corp. and GM Hughes Electronics from A to A-minus.

Lowering a company's debt rating can raise its borrowing costs.

The agency said that while GM's operating efficiency and products will likely improve, the gains could be offset by market and competitive factors.

GM "continues to enjoy well-above-average financial flexibility," S&P said.

At year-end, GM had about $90 billion in consolidated debt outstanding, the rating service said.

BUSH

Autos beat oil on vapor catcher

continued from PAGE 1

troversial trip to Tokyo with Big 3 executives. They include:

- In late February Attorney General William Barr said he would use U.S. antitrust laws to stop unfair trade practices by U.S. trading partners, including the Japanese.
- Treasury Department officials have begun reconsidering their 1989 decision to classify imported minivans and sport-utilities as cars, with a 2.5 percent tariff. Reclassifying the vehicles as trucks would raise the tariff to 25 percent.
- U.S. Customs announced that Honda of America did not meet U.S.-Canadian content requirements for tariff-free shipment of Civics built in Canada and shipped to the United States. Honda officials and Canadian politicians blasted the decision, which would cost Honda $16.5 million in back tariffs.
- Early this month, the Federal Trade Commission subpoenaed documents from the U.S. office of the Japan Automobile Manufacturers Association here as part of a probe of possible discrimination against U.S. parts makers by Japanese transplant manufacturers.

Some observers see these actions as a series of unrelated moves, a reflection of Bush's inattention to trade issues and decisions by individual bureaucrats to pursue their own course.

But others see a planned effort to improve the president's image on trade, particularly auto and auto parts trade with Japan. The moves are designed to counter continuing criticism from congressional Democrats and Republican challenger Buchanan as the recession drags on, car sales slump, layoffs grow and the presidential primary season advances.

Contrary to press predictions last week, Bush did not use Friday's speech to announce a program that would allow companies with pollution problems to earn credits from the government by buying up and scrapping older, higher-polluting cars.

That program would not only help remove a major source of air pollution from the highways, it would boost the market for used and new car sales, proponents say. The plan is reportedly still in the works, however, and may be announced next week.

The EPA had estimated that the on-board fuel recovery units would cost about $25 per car. In announcing the decision, Bush cited a Department of Transportation review that indicated the canisters would be more dangerous than recovery units installed on gasoline pumps.

The Clean Air Act amendments of 1990 called for on-board canisters unless they were determined to be a safety risk. Now, the government will require so-called Stage II vapor collectors on gas pumps in most states.

Bush said the decision stemmed from the 90-day moratorium on new federal regulations that he announced in his state of the union speech in January.

A Washington-based Chrysler Corp. representative said he is not bothered by the political overtones of the decision.

"If the ultimate result is good, I guess I don't care what motivates it," said John Guiniven.

Auto executives in Detroit were happy (see story at right); the decision did not please oil industry representatives.

"I think it's very unfortunate, because the proposed on-board refueling canisters represent the most cost-effective technology for capturing gas vapors," said William O'Keefe, chief executive of the American Petroleum Institute in Washington.

O'Keefe noted that on-board canisters are called for in the 1990 amendments to the Clean Air Act and have been endorsed by EPA administrators.

On Feb. 20, the American Petroleum Institute, joined by the Natural Resources Defense Council and others, sued EPA in federal court in Richmond to force it to choose on-board canisters.

"We're in court now and we'll stay in court. Unfortunately, that's what will probably be required — to get the court to tell EPA to do what Congress told it to do," O'Keefe said.

The junker car proposal is expected to be less controversial.

Owners of older cars would be paid $700 to $1,000 for voluntarily turning them in. At the same time, companies that buy up the cars could avoid penalties for other forms of air pollution that they produce.

The junker rule was proposed again by the National Automobile Dealers Association in a meeting with Bush's chief of staff Samuel Skinner in February. It was supported by a DRI/McGraw-Hill study paid for last fall by the auto industry.

INCENTIVE WATCH — CUSTOMER INCENTIVES

CONTINUING PROGRAMS	
CHRYSLER CORP.	
Expires March 31. Finance rates in lieu of rebates from zero to 9.9 percent.

1991 models	
Expires March 31. In lieu of rebates, finance rates of 2.9 to 7.9 percent are offered.	
Ford Festiva, Probe	$1,000
Escort, Mustang, Thunderbird	$750
Taurus SHO	$600
Tempo, other Taurus	$400
Ford Bronco, Econoline E-150 RV	$1,000
Aerostar (regional)	$400-1,000
Ranger, F series, other Econoline	$400
Mercury Capri	$2,000
Tracer, Cougar	$750
Topaz, Sable	$400
GENERAL MOTORS	
1992 models	
Expires June 4, unless otherwise indicated. In lieu of rebates, finance rates of 2.9 to 6.9 percent are offered.	
Buick (based on option package ordered)	
Riviera	$2,000
Skylark, Century, Regal, LeSabre	$250-1,000
Cadillac (expires March 31)	
DeVille, Fleetwood, Brougham	$1,500
Chevrolet Lumina; Geo Storm, Prizm, Metro (manual)	$750
Cavalier, Camaro	$500
Geo Metro (automatic)	$300
Chevrolet S/T Blazer	$1,000
S/T pickup, Lumina APV	$750
G van	$500-750
C/K pickup	$400
GMC S15 Jimmy (exc. Typhoon)	$1,000
Sonoma (exc. Syclone)	$750
Sierra (regular cab)	$400
GMC (expires March 31)	
G van	$500-1,000
Safari	$500
Oldsmobile (regional)	
Toronado, Silhouette, Bravada	$1,000-2,000
Custom Cruiser	$1,000-1,500
Cutlass Ciera	$1,000
Cutlass Supreme	$750-1,500
Ninety Eight, Eighty Eight	$500-1,250
Pontiac Grand Prix, Trans Sport	$750
Sunbird, Grand Am, Firebird, Bonneville	$500
1991 models	
Expires May 4, unless otherwise indicated. In lieu of rebates, finance rates of 2.9 to 6.9 percent are offered.	
Buick (based on option package ordered)	
Reatta	$2,000
(other rebates same as 1992 models)	
Chevrolet (same as 1992 models, cars and trucks)	
GMC (expires March 31)	
G van	$500-1,000
Safari	$400
Other GMC (expires May 4)	
Same as 1992 rebates on S15 Jimmy, Sonoma, Sierra	
Oldsmobile (regional)	
Cutlass Calais	$700-1,000
(other rebates same as 1992 models)	
Pontiac (same as 1992 models)	
HYUNDAI (expires April 2)	
Excel (1991)	$1,000
Excel (1992)	$500
Elantra (1992)	$1,000
Scoupe (1991)	$750
Scoupe (1992)	$500
Sonata (1991)	$1,500
Sonata (1992)	$750
MAZDA (1992 models, expires April 6)	
Protege, 626, MX-6	$1,000 plus free air conditioning or automatic trans.
Pickups	$400-1,200
MITSUBISHI (expires April 30)	
Eclipse (1991-92, national) 5.9 to 8.9 percent loans, based on down payment	
Pickups (1990-92, Southwest region)	$1,000

Loyale (1991-92)	$500
Legacy (1992)	$500

Bush eases auto rules; Big 3 cheer

PHIL FRAME
Staff Reporter

DETROIT — Big 3 executives reacted warmly last Friday to the news that the domestic industry will get some regulatory relief from the federal government.

In a speech to the Economic Club of Detroit, President Bush announced that auto companies will not be required to design cars with fuel vapor recovery canisters to cut pollution during refueling.

The decision had been widely anticipated. "Obviously, the Department of Transportation had pretty well set that up ahead of time because of the safety issue," said Robert Stempel, General Motors chairman. "I was pleased to hear him put that in there. And hopefully, that will put it to bed once and for all."

The EPA will require vapor recovery systems at the gas pumps. Harold Poling, Ford Motor Co. chairman, noted that the pump system will do more to improve the atmosphere because it will catch all vapors from the start. On-board devices would not have been retrofitted into older cars.

Chrysler Corp. President Robert Lutz also reacted favorably to the announcement.

"We'll take regulatory relief anywhere we can get it," he said. "The canister issue is more of a safety issue than a cost issue."

Bush was in Detroit in advance of this week's primary election in Michigan, and he loaded his speech on domestic and foreign issues with auto-related topics. He said:

- He will not sign any corporate average fuel economy legislation that would hurt American industry or lead to higher unemployment.
- He will continue to back the battery consortium to promote electric cars.
- He said he strongly supports a free-trade agreement with Mexico. He said it would not lead to the export of jobs to Mexico and would make Mexico more prosperous and a better market for U.S. goods, including cars.

In his most passionate comment, Bush bristled at suggestions that he had intervened in GM's decision to close an assembly plant in Michigan rather than a plant in his adopted home state of Texas.

"I made no such intervention," Bush said, shaking with rage. "It is a bald-faced lie!"

Stempel said he thought Bush had a good position on CAFE. "I thought he was upbeat and pretty positive," said Stempel.

Bush referred to his recent trip to Japan, saying he took some flak for it but it is paying off already with new American business in the computer, glass and paper markets.

He asked business leaders in the audience to work with the government in retraining workers and help them adapt to a changing economy.

Nissan adds dealer spiffs

Nissan Motor Corp. in U.S.A. announced factory-to-dealer rebates through May 4, dealers said.

The incentives range from $500 to $1,000 on 1992 cars and $1,000 to $1,300 on 1992 trucks. The program also includes a $1,000 payment on the 1991 240SX.

NHTSA opens Chevy, GMC surge probe

MAX GATES
Staff Reporter

WASHINGTON — Government engineers have opened a preliminary investigation of engine surges in Chevrolet S10 Blazers and GMC Jimmy sport-utilities. They have been blamed for 13 accidents, including one fatality.

A total of 803,000 1989-91 vehicles could be involved. The probe involves trucks with 4.3-liter engines. According to 15 complaints received by the National Highway Traffic Safety Administration, the engines may surge on startup or as the vehicle comes to a stop.

NHTSA also has intensified its probe of leaking exhaust gases in 1989-91 Suzuki Sidekicks/Geo Trackers. NHTSA has received five complaints of smoldering carpets and back-seat cushions from hot exhaust leaks in the Sidekick/Tracker models. The investigation covers 83,000 vehicles.

NHTSA has intensified its probe of damaged brake lines in 1990-91 Ford Crown Victoria police cars. According to 26 complaints, the braking power of the cars may be reduced when brake lines become perforated from rubbing against the frame. ■

Hills opposes auto, parts quota

WASHINGTON — U.S. Trade Representative Carla Hills last week said she opposes using quotas on autos and auto parts to reduce the United States' $43 billion a year trade deficit with Japan.

Agreements guaranteeing U.S. companies a share of foreign markets only "sets ceilings on what U.S. companies can achieve," said Hills, the Bush administration's chief advocate of open markets.

Hills testified before the House subcommittee on trade in opposition to the Gephardt-Riegle bill, which would require Japan to reduce its trade surplus with the United States or face limits on auto imports. ■

ANNE E. WRIGHT
Chief Statistician

U.S. and Canadian car and truck production this year is 11.0 percent ahead of the year-ago period.

Car production in the two countries is 1,259,124, trailing 1991 by 2.4 percent.

Truck producers have assembled 958,385 units in 1992, up 35.3 percent.

Last week, the estimated build by U.S. car producers was 111,818, down 5.6 percent from the prior week but up 7.1 percent from the year-ago week.

So far this year, 1,084,098 cars have been assembled in the United States, 1.2 percent below the same period in 1991.

Canadian car producers' estimated production last week was 15,682, up 64.4 percent from the prior week but down 27.4 percent from the year-ago week.

Year-to-date car production in Canada is 175,026 down 9.5 percent from 1991.

Last week's production by U.S. truck producers was estimated at 84,123, up 11.4 percent from the prior week and 110.3 percent from the year-ago week when five plants were down because of slow sales.

Year-to-date, U.S. truck production is 727,377, up 29.6 percent from the year-ago period.

In Canada, estimated truck production last week was 20,005, down 12.0 percent from the prior week but up 37.6 percent from the year-ago week.

So far this year, 231,008 trucks have been assembled in Canada, up 57.1 percent from 1991.

Last week's estimated daily build rate was 46,326 cars and light trucks in the United States and Canada, up 2.4 percent from the prior week and up 28.3 percent from the year-ago week.

Toyota Motor Manufacturing U.S.A. Inc. began building the Camry wagon in Georgetown, Ky., March 10.

The Kentucky plant will be the sole producer of the wagon, which also will be exported. Production is expected to reach 220 wagons a day by July, bringing total Georgetown output to 900 cars a day.

Toyota expects to build about 35,000 of the wagons this year, with about 15,000 to be sold in the United States.

General Motors scheduled overtime last Saturday at three truck facilities: Janesville, Wis.; Scarborough, Ontario; and Oshawa, Ontario.

Ford Motor Co. ran daily overtime last week at the Kansas City, Mo., and Louisville, Ky., truck plants.

Chrysler Corp. idled three car plants this week to adjust inventory levels: Newark, N.J.; Belvidere, Ill.; and Sterling Heights, Mich.

The Belvidere facility will resume production the week of April 6. The Newark plant will resume operations the week of March 23, and the Sterling Heights plant will return to work March 30.

Chrysler's St. Louis truck plant worked overtime last Saturday. ■

Eaton faces a full plate

After Iacocca: new vehicles, fewer dealers

MARY CONNELLY
Staff Reporter

HIGHLAND PARK, Mich. — Chairman-designate Robert Eaton is positioned to determine Chrysler Corp.'s shape into the next century. His experience as the enormously successful president of General Motors Europe suggests how he might succeed Lee Iacocca.

A legendary stickler for product quality, Eaton, 52, brings added rigor to the debut of Chrysler's new mid-sized cars this fall. He has delayed launches at GM when quality wasn't up to his standards.

Even before Eaton was named vice chairman and chief operating officer, the company appeared poised to regain financial and marketplace health. He will succeed Iacocca as chairman and chief executive officer next Jan. 1. Iacocca will remain as chairman of the executive committee of the board of directors.

Said Eaton: "I intend to do everything I can to build the strongest team, to build the strongest products, the best customer satisfaction, the highest quality and the lowest cost."

JOE WILSSENS/AUTOMOTIVE NEWS

Bob Eaton, right, accepts a handshake from Lee Iacocca and a smile from Bob Lutz.

Does Robert Eaton deserve the reputation he's bringing to Chrysler? **Page 35**

Jerome York, Chrysler's chief financial officer, emerges as a powerful lieutenant. **Page 34**

Robert Lutz: "Am I disappointed? Of course. Who wouldn't be under the circumstances." **Page 35**

He will also make several major decisions that will still be pending upon Iacocca's retirement:

- How many brands? Chrysler is considering eliminating the Eagle or the Plymouth brand.
- How many dealers? The company is considering reducing its network of 5,000 dealers.
- How many Japanese vehicles to sell? Eaton is likely to have an impact on Chrysler's relationship with Mitsubishi Motors Corp., which has been changing because of Iacocca's anti-Japanese trade stance and Chrysler's withdrawal from a joint-venture assembly plant in Illinois. At GM, Eaton was critical of the sale of Japanese vehicles through the Chevrolet Geo brand, arguing that it generates little profit and makes the automaker appear hypocritical in the trade debate.
- How to approach Europe? Chrysler has been adding export sales there and recently began

Chrysler mulls prime-time exit

CHICAGO — Chrysler Corp. may drop out of prime-time network TV advertising as part of a sweeping reorganization of its media strategy.

"We are seriously questioning whether we want to continue advertising on prime time," John Damoose, Chrysler vice president of marketing, said last week.

Damoose said Chrysler is moving money into more targeted media in response to both the growth of alternative media and the fragmentation of the automotive market, according to *Advertising Age*, a sister publication to *Automotive News*.

Money moved out of prime time would likely end up in network sports and news, print media, promotional programs and so-called niche media, Damoose said.

Cut in Japanese quota: End of an era

Big 3, UAW scoff at 'empty' gesture

RICHARD JOHNSON
Staff Reporter

TOKYO — The announcement last week that Japanese carmakers will cut their self-imposed ceiling on car exports to the United States by 28 percent, to about 1.65 million units a year was quickly dismissed by U.S. automakers and union leaders as an "empty" or "meaningless" gesture.

But Japanese carmakers view the cut — which reduces the ceiling to about the number of cars actually shipped in recent fiscal years — as the end of an era, triggering sweeping changes in their industry.

Japan's Ministry of International Trade and Industry cut the allocation from 2.3 million cars, where it had been since 1985. The new level is a 5 percent cut from the 1.73 million cars exported to the United States in the last fiscal year.

The voluntary curbs cover only passenger cars. Japan's exports of light trucks to the United States, which are not subject to a cap, slipped 5.3 percent in calendar 1991, to 704,328 units.

"When the U.S. market gets healthy again, I don't think MITI can be expected to raise the ceiling," said a Honda Motor Co. official. "We won't ever see a high number again."

As a result, Japanese carmakers are expected to accelerate local production plans, increase exports to the United States from outside Japan, raise prices when market

Saturn stores post top '91 sales average

JOHN K. TEAHEN JR.
Senior Editor

For the first time in 15 years, a Big 3 make is king of the hill in new-car sales per dealer.

Saturn, the newest of the General Motors entries, averaged 776 deliveries per outlet in 1991 to beat Honda by more than 100 units. Honda was the car champion in 1989 and 1990.

The last time a domestic car finished on top was 1976, when Chevrolet edged Toyota by three sales per store.

In combined car and truck sales per dealership, Toyota was the leader for the third year in a row. But Saturn made it close even though its retailers don't sell trucks. Toyota dealers averaged 789 car-truck sales to Saturn's car-only count of 776.

Saturn is doing even better thus far in 1992. It led the *Automotive News* car and car-truck sales-per-dealer rankings in January and February.

Saturn's sales per dealer also were No. 1 for the first two months of 1992.

CAR SALES PER OUTLET

	1991	1990
1. Saturn	776	43
2. Honda	673	742
3. Toyota	563	609

Aside from Saturn's victory in the car column, the Big 3 didn't have much to cheer about in 1991 sales averages. Buick, up four units, was the only other domestic car to post an increase. Saturn went on sale Oct. 25, 1990, and averaged 43 deliveries per outlet for 1990.

see DEALERS, 20

Saturn gaining fans and kudos; dealers added; output climbs

LINDSAY CHAPPELL
Staff Reporter

NASHVILLE, Tenn. — Saturn, the General Motors venture that skeptics have loved to nitpick, is quietly piling up praise from buyers, dealers and independent surveys.

Part of the glee stems simply from a rapidly growing dealer body that is finally getting the product it needs. But there are other, more critical signs of success, particularly in the retail and distribution end. Saturn's average of 776 new-car sales per dealer led the industry in 1991, the first time in 15 years a domestic nameplate finished on top. (See related story on Page 1.)

The operation appears to be on target in capturing would-be import buyers. Saturn has turned embarrassing recalls into textbook cases of pleasing the customer. And in a growing list of other measures, such as dealer satisfaction and sales satisfaction, Saturn is in the same league as industry-leading luxury brands. But one huge question mark looms: quality. The first Saturns finished below the industry average in last

that retains the luxury tax on over-$30,000 automobiles but drops a proposed 25 percent tariff on imported minivans and four-door sport-utilities.

After working out differences last Thursday and Friday, the two chambers were expected to vote by President Bush's Friday deadline for action. But Bush was expected to veto the bill because it contains a tax increase on wealthy Americans.

Under the final bill, the $30,000 luxury threshold would be raised to keep pace with inflation. Conferees killed a Senate measure to raise the tariff on minivans and four-door sport-utilities from the current 2.5 percent to 25 percent.

— Max Gates

Japan simplifies GM imports

WASHINGTON — The Japanese government has cut some paperwork to allow General Motors to export more U.S.-built Pontiac Grand Am SE sedans and coupes. Similar action on other U.S.-made vehicles may follow soon.

The move will shorten the inspection time for Grand Ams going into Japan and will enable GM to ship the cars in batches of more than 2,000.

The GM cars are the first U.S.-made models to be granted the expedited inspection status, which is currently held by about 20 European models.

A GM spokesman called the move a "step in the right direction" but said there are more barriers to overcome before the Big 3 achieve their stated goal of selling more cars in Japan.

Brake problem prompts recall

DEARBORN, Mich. — Ford Motor Co. said it is recalling about 517,600 trucks to repair a front brake problem.

The affected vehicles are 1988 to 1991 F-250 and F-350 trucks. The affected trucks are equipped with one of three engines — 5.8-liter V-8 (4x4 only), 7.5-liter V-8 or 7.3-liter diesel V-8 — and have gross vehicle weight ratings over 8,500 pounds.

Ford said that under severe driving conditions the trucks could lose front braking effectiveness due to overheated brake fluid. The rear brakes remain operational. The problem is most worrisome in trucks in mountainous regions or towing near capacity.

Ford recalls 2,700 cars

DEARBORN, Mich. — Ford Motor Co. is recalling about 2,700 cars to repair safety and emissions problems.

Ford is recalling about 500 1992 Ford Taurus/Mercury Sable wagons to inspect and possibly replace the rear liftgate latch assembly. The liftgate may not completely latch and could open while the car is being driven.

Ford is also recalling about 2,200 1992 Ford Thunderbirds and Mercury Cougars with the 3.8-liter V-6 to replace the electronic engine control processors. Exhaust emissions on those vehicles may exceed federal or California standards.

Mitsubishi hikes prices

CYPRESS, Calif. — Mitsubishi Motor Sales of America Inc. last week raised prices a sales-weighted average of 2 percent or $357. The hike is effective today, and vehicles shipped to dealers from port stocks by March 31 will be price-protected.

Mitsubishi attributed the increase to recent pricing actions taken by its competitors. Other Japanese importers have blamed their pre-spring hikes on the appreciation of the yen against the dollar. Most observers say the increases are an answer to the stepped-up trade friction between the United States and Japan.

By nameplates, the increases are: $200 on Mirage, $269 on Galant, $128 on Eclipse, $745 on Diamante, $900 on 3000GT and $660 on Montero.

Prices of Expo and Expo LRV sport wagons and Mighty Max pickups were not raised.

Chrysler signs British dealers

LONDON — Chrysler Corp.'s British sales arm said late last week that it has signed 63 of the 80 dealers it needs for its scheduled product launch next January. The company, Chrysler Jeep Imports U.K. Ltd., has targeted first-year combined sales of 2,000 Jeep Wranglers and Cherokees and Dodge Vipers.

The company has said that right-hand-drive Cherokees and Wranglers, with 2.5-liter and 4.0-liter engines, will be in showrooms by January. They are slated to be joined by right-hand-drive Grand Cherokees and Plymouth Voyagers by late 1995.

The company said the British market's first-year allocation of 50 Vipers has been pre-sold, despite the car's price of $85,000.

— Vaughan Freeman

Honda, Rover, VW add spiffs

American Honda Motor Co. Inc. is paying $500 rebates to dealers on sales of 1991 Accords and 1991 Preludes. No expiration date was announced. Also, in California, Honda is paying dealers $500 on sales of 1992 Accords through April 2.

Until March 31, Volkswagen United States is paying dealers $2,000 on sales of 1991 Cabriolets.

Range Rover of North America Inc. is offering a special lease plan on the 1992 Range Rover (excluding the County and LSE models) through April. The payment is $499 a month for 48 months with 10 percent down or $599 a month for 48 months with no money down. The suggested retail price of the Range Rover is $38,900 (see incentive tables on Page 36).

briefly

C'mon, say it: President Perot

More than five years after being ousted from **General Motors,** Texas entrepreneur H. Ross Perot has his sights on another executive post: president of the United States. Perot told the National Press Club last week that his supporters are working to get him on the November ballot in all 50 states as an independent. His platform includes racial harmony, balancing the budget, paying off the $4 trillion national debt and reforming education. On business issues, he says the United States desperately needs an industrial policy that will help, rather than hinder, business. And he says North American free-trade negotiations will end up "moving the highest paying jobs to Mexico." Perot criticized the revolving door that puts former U.S. government trade negotiators on the payroll of foreign countries. "We don't have anybody who knows how to horse trade," he said of U.S. failures in trade talks with the Japanese. "The negotiations are so well run on their side and so poorly run on our side that you could make a tragi-comedy out of it."

Perot: no baby kisser

ANOTHER COMPARISON — Satisfied with its new ad campaign in Japan that compares the **Cadillac** Seville to the **Infiniti** Q45, **General Motors Japan** has now moved on to its bread-and-butter car. Ads debuting last week compare the **Pontiac** Grand Am with the **Toyota** Mark II hardtop 2500 Grande G. Japan is not used to this kind of advertising. Maybe GM first should have introduced the concept of drag racing.

BRING THREE FORMS OF I.D. — U.S. Rep. Robert Torricelli (D-N.J.) spoke at **BMW of North America Inc.** last week, touting his proposal for a government study into recycling cars, an area where BMW is active. Torricelli joked that he asked Karl Gerlinger, BMW president, if he could buy a car — with a check drawn on the now-infamous Congressional bank. "Business must be good," Torricelli said. "He turned me down."

GERMANS SAY 'SHOW ME' — "They made my day," **GM** President Lloyd Reuss said when told that **Mercedes-Benz** representatives had asked to visit the paint finish operations at GM's Wentzville, Mo., assembly plant that builds H-body cars.

MISSED THE CUT — Allan Gilmour, executive vice president at **Ford Motor Co.,** was asked at an Automotive Press Association luncheon in Detroit to comment on the elevation of **GM's** Robert Eaton to the vice chairman post at **Chrysler Corp.** It was too bad, he said, that "I wasn't on the short list."

YOURS IS NOT TO QUESTION WHY — Some Volvo dealers are turned off by Volvo's new, graphic crash ads, said Joseph Nicolato, president of **Volvo Cars of North America.** However, the scary safety message is effective in reaching the aging yuppies Volvo is trying to attract, Nicolato told the International Motor Press Association. Dealers don't fit "Volvo demographics or psychographics," Nicolato said. "They just sell 'em."

Japanese lose minivan share

Decline could affect Big 3 dumping case

MAX GATES
Staff Reporter

WASHINGTON — Japan's share of the U.S. minivan market has declined slightly in the past 11 months, despite charges by the Big 3 that dumping by Toyota and Mazda threatened their minivan sales.

Japanese imports, primarily the Toyota Previa and Mazda MPV, have accounted for 10.9 percent percent of U.S. minivan sales since the first quarter of last year. During the same 11-month period in 1990-91, the Japanese share was 11.4 percent.

Most of the year-to-year decline is explained by the Nissan Axxess, which was dropped from the market in 1990. Previa sales rose 1.5 percent over the last 11 months, and the MPV gained 1.8 percent.

Still, the relative flatness of Previa and MPV sales could affect the outcome of the Big 3 minivan dumping case against the Japanese.

If the Department of Commerce's preliminary dumping finding is upheld, the International Trade Commission must then determine if the Big 3 have been hurt by the Japanese pricing practices. The commission can consider a wide range of factors, including recent sales and market share patterns, in making its decision, a commission spokesperson said.

When the Big 3 filed their dumping petition last May, they pointed with alarm to Japan's 2 percentage point increase in market share, to 12.2 percent, during the first quarter of 1991. And they said things would get worse with last summer's arrival of the Mitsubishi Expo.

In the 11 months since then, though, Japanese sales have leveled off. And Commerce has sided with Mitsubishi in ruling that the Expo is not a minivan.

"So much for the notion of 'Japan Inc.' that is impervious to outside forces. We're dealing in this marketplace just like they are, and it's tough," said Clark Vitulli, chief operating officer of Mazda Motor of America Inc.

Toyota and Mazda also have stuck their minivans, especially the lowest-priced ones, with significant price increases. Mazda's lowest-priced MPV now costs 10.7 percent more than it did last May. Toyota's entry-level Previa has gone from $14,698 to $17,518, a 19.2 percent increase.

Price increases on domestic models, meanwhile, have been much smaller. And the Big 3 have tended to put their biggest hikes on their top-of-the line models.

Sales from segment leader Chrysler have risen 12.8 percent for the 11-month period, while Ford and General Motors minivan sales have dropped.

In its ruling last December, Commerce said Mazda was selling its minivans at 7.19 percent below fair market price and Toyota was selling at 0.95 percent below fair market price. Commerce is scheduled to make its final ruling May 18.

After that, the trade commission must decide if the Big 3 have been hurt, or could be hurt in the future, by the Japanese pricing.

The commission has scheduled a hearing for May 21 and will issue its ruling by July 2.

If it determines that the Big 3 have been hurt by the Toyota and Mazda pricing, the government will assess penalties against the Japanese minivan makers.

AIDS: NO ONE IS IMMUNE

Big 3, Mazda stress education; other transplants lag

LIZ PINTO
Staff Reporter

In 1988, Bruce White, a 36-year-old AIDS patient and 16-year GM employee, told his coworkers he had the deadly disease. The news caused a panic at GM's Hydra-matic transmission plant in Flint, Mich., where White worked.

White's coworkers shunned him and many refused to work near his station. Before the situation was diffused, White locked himself in the restroom to protest his treatment.

"Because most of us had never been around a person with AIDS before, many people panicked," said David Yettaw, president of Local 599 at the plant. "But GM called in a doctor to meet with people and explain exactly how the disease is — and is not — transmitted and none of us were at risk of catching it. After that, things calmed down."

The company didn't have to invent a response to save the plant's morale and productivity.

Four years earlier, GM encountered its first incident of AIDS in a small Mississippi plant, which led the company and the UAW in 1986 to begin developing a corporate policy and educational program on the acquired immune deficiency syndrome, a contagious, incurable disease.

AIDS is caused by the human immunodeficiency virus, HIV. The virus attacks and weakens the immune system, leaving a person susceptible to a wide variety of infections and cancers which

Ford is asking its California dealers to sell the Thunderbird LX for $15,859.

Ford experiments with bargain-priced Thunderbird LX

KATHY JACKSON
Staff Reporter

Ford Motor Co. wants to upgrade the image of its Thunderbird and is using trendy California to test the notion.

In California, Ford has eliminated the base Thunderbird model and sells only the LX, the Sport and the Super Coupe.

Dave Smith, regional marketing manager for Ford Division, said the "LX was always a step up — more content (than the base); what this means is that the customer will buy a Thunderbird that starts out being well equipped at a good price."

The program involves only the LX model with a California-only preferred equipment package.

The package adds cast aluminum wheels, electronic climate control, rear window defroster, floor mats and cornering lamps. Dealers can purchase the car for $14,500; they are encouraged by the factory to sell the cars at about $15,859.

There are no customer rebates in the test program.

In other parts of the country, a comparably equipped LX costs the dealer $16,794 and has a suggested retail price of $19,518.

"It's a hell of a buy," said Barry Adams, general sales manager at Homer Heller Ford in Escondido, Calif. Adams said his LX models are going out the door at $15,759 or less. "I don't think there's a better buy in the marketplace."

Adams said profits are down from about $2,200 for each LX model previously sold to about $1,200 since the new program began in January, but he said Thunderbird sales at his store are up 50 to 60 percent, and the vast majority of the sales are LX models.

see T-BIRD, 37

Buick considers giving dealers choice of ad group fee plans

PHIL FRAME
Staff Reporter

Buick is studying a proposal to change the way it handles ad association fees charged to dealers.

If it is approved, Buick dealers would have the option of selecting from two methods of ad fee collection, according to a dealer source familiar with the proposal.

One option is patterned after the out-of-court settlement of a lawsuit filed by two Ohio General Motors dealers and the Ohio Automobile Dealers Association.

The other option would sweeten Buick's present ad fee plan that gives dealers a bonus based on the amount of local advertising purchased.

Now, 1 percent of vehicle invoice price goes to local dealer marketing groups. The local marketing group uses 75 percent of the money, and individual dealers may use the remainder for local promotion.

Buick gives individual dealers a $1 bonus for every $4 they spend on local ads, based on proof that the ads ran and approval by the manufacturer.

Buick is thinking of sweetening that bonus formula. One idea is to give dealers $2 for every $4 spent on local ads, although a new formula has not been adopted.

Under the plan being studied, dealers could choose the present structure with a new bonus formula, or opt for the formula established in the settlement of the lawsuit in the U.S. District Court of Columbus, Ohio.

The settlement, which a judge approved last week, rolls the 1 percent fee into the price of vehicle models and options rather than adding it to the invoice.

It also makes membership in ad associations optional. If dealers choose to remain in ad associations, they may use up to 40 percent of their association fees for local promotion activities. Dealers who do not join associations can direct the manufacturer how to spend the other 60 percent.

"My initial reaction is that the Buick plan is better — that's how the arithmetic works out," said a dealer who did not want to be identified.

Chevrolet and GMC Truck already have adopted the Ohio plan nationwide. Other GM divisions are studying how to address the situation.

World vehicle output drops 4.1% in 1991

ROGER ROWAND
Staff Reporter

World vehicle production in 1991 declined 4.1 percent from 1990 as sales tumbled in North America, Europe and Japan, the major markets.

The 12 top world producers assembled 1,548,677 fewer vehicles in the 12 months as their total output dipped to 36,527,849 units from the 38,076,526 cars, trucks and buses built in 1990.

General Motors, Ford Motor Co. and Toyota Motor Corp. kept their 1-2-3 rankings, while Volkswagen AG slipped by Nissan Motor Co. Ltd. to take fourth place.

Fiat Group, Peugeot SA, Honda Motor Co., Mitsubishi Motors Corp. and Renault SA finished in sixth through 10th places, just as they did in 1990.

Mazda Motor Corp. moved up to 11th, ahead of Chrysler Corp. ■

GM, Toyota merge Aussie units

PEDR DAVIS
Special Correspondent

SYDNEY, Australia — After four years of talks, General Motors and Toyota Motor Corp. agreed last week to merge some of their Australian operations.

The two companies first set up a joint-venture holding company, United Australian Automotive Industries, in May 1988. At the time, it was expected UAAI would take over and begin merging the two companies' production in 1989.

The full merger never took place, and the two have been attempting ever since to work out a partnership agreement.

In the final agreement, UAAI will own both Toyota Motor Corp. Australia and General Motors-Holden's Automotive Ltd. UAAI in turn is equally owned by GM and Toyota. UAAI will be responsible for all future planning and corporate activities for both brands, but Holden's and Toyota will handle their own marketing. Holden's and Toyota will continue to sell vehicles through separate dealer networks with their own brand names.

Toyota will continue to design four-cylinder cars sold with Toyota and Holden badges, and Holden's will be responsible for six-cylinder models. In all, three shared model lines will be sold.

Toyota Australia will have sole franchise rights to imported Toyota commercial vehicles. Holden's will continue to import commercial and four-wheel-drive models from Japan's Isuzu Motors Ltd., which is 37.5 percent owned by GM.

Separately, GM said it would spend $120 million Australian (about $91 million) to install the second stage of a base-coat/clear-coat paint facility at its plant in Elizabeth, South Australia. The first phase was completed in 1989.

UAAI also announced the appointment of Ian Webber to the position of non-executive chairman. He is former chief engineer of Chrysler Australia and the first managing director of Mitsubishi Motors Australia Ltd. ■

Revamped RX-7 aims at richer, older men

KRISTINE STIVEN BREESE
Staff Reporter

MARINA DEL REY, Calif. — As Mazda Motor of America Inc. introduces its third new product in six months, its demographic targets continue to climb higher.

Like they did with last fall's 929 replacement, Mazda market planners are predicting that buyers of the 1993 RX-7 will be richer, older and better-educated than owners of the earlier model.

Mazda expects typical buyers of the new RX-7 to be about 44 years old, with a median income of $95,000. Three-quarters of them will be college-educated and 55 percent will be married.

By contrast, buyers of the current model are about 35 years old and make $59,000 annually. Sixty-five percent went to college and only 39 percent are married.

But the biggest difference will be gender, Mazda says. While the old RX-7 was bought by more women (52 percent) than men, Mazda expects that only 20 percent of the buyers of the new car will be female.

George McCabe, Mazda's group vice president and general manager, says that much of the male skew will come from the car's increased price tag. The new car will start at $31,300, $4,200 above the base price of the old turbo model, last offered as a 1991 model.

In addition, McCabe says Mazda's product offering has expanded in recent years so that female buyers now have more sporty choices than before, such as the MX-6, Miata and MX-3, introduced last fall.

Mazda also believes the 1993 RX-7 will attract more male buyers because of its increased performance.

Mazda is launching the "pure sports car" with ads that rely heavily on racing images and Mazda's own motorsports successes. The ads are clearly geared more to a male audience.

While the former model came with a choice of two engines — a 160-horsepower normally aspirated powerplant and a 200-hp turbocharged rotary — the new model has only one. The 1993 RX-7's two-rotor engine with twin turbochargers generates 255 hp at 6,500 rpm and 217 pounds-feet of torque at 5,000 rpm.

A driver-side airbag is standard on Mazda's redesigned RX-7; a passenger-side airbag will be added in 1994.

The car comes with two option packages. The $1,000 "R1" package includes high-performance tires and dual air coolers. The $3,000 touring package includes leather interior, cruise control, power sunroof and a custom stereo.

The company expects to sell 9,000 RX-7s in the 1992 calendar year and 10,000 to 12,000 a year after that. ■

ROSEN SYSTEMS, INC.
PUBLIC AUCTION

DYNAMOMETER · SUN ENGINE ANALYZERS · HUNTER ALIGNMENT SYSTEMS · PAINT BOOTHS/OVENS · AIR COMPRESSORS · LARGE QTY. FINE TRADITIONAL OFFICE FURNITURE · COPIERS · *and much more to be sold*

TUES. & WED. APRIL 7TH & 8TH 10:00 AM

This is a secured party sale on the premises formerly known as
HENRY BUTTS OLDSMOBILE INC.
4000Midway Road, Carrollton (Dallas), Texas

DAY 1 – TUESDAY

DYNAMOMETER
- **Clayton** Mdl. CT-250 in-ground chassis, s/n CT-3642-R, 120 max. mph, 250 max. h.p., 34" min. axle size, 106" max. axle size

ALIGNMENT
- (5) **Hunter** Mdl. C111 4-wheel independent alignment sys., digital controls, 10" to 16½" wheel size, w/ramp type hyd. rack & portable cabinets

SUN ENGINE ANALYZERS
- **Sun** Mdl. Interrogator 1805 computer & Mdl. Sleuth One-101, w/strobe, accessories & cabinet; (3) Mdl. VAT-40 volt-amp test stands, portable

PAINT BOOTHS/OVENS
- (2) **Blackhawk** downdraft type paint spray/bake ovens, 13'W x 23'D x 9'H, w/spray temp. settings, bake temp. settings, bake timer, **Duyer** Mdl. Mark II 25 manometers, **Maxon** LP gas regulators, 10 h.p. blower motors, sprinklers & explosion proof lighting
- (2) Infrared portable heat lamps

CHAMPION AIR COMPRESSORS/DRYERS
- (4) **Champion** Mdl. HRA25D-25 50 h.p. (2x25) piston type air compressors, horiz. tank mounted, auto. tank drain; (5) Mdl. HR10D-25 20 h.p. (2x10) piston type air compressors, horiz. tank mounted; (4) Mdl. 80200 compressed air dryers, rated cap. 200 SCFM at 100 PSIG & 100°F inlet air, MWP 200 PSIG; (3) Mdl. 8070 compressed air dryers, rated cap. 70 SCFM at 100 PSIG & 100°F inlet air, MWP 175 PSIG

AC TEST/RECYCLE
- (3) **GM** Mdl. 10985 microprocessor air cond. recovery/recycle service stations
- **Kent Moore** Mdl. J-38100-C microprocessor air cond. recovery/recycle service stations

AMMCO BRAKE EQUIPMENT
- (2) **AMMCO** brake turning stations, w/Mdl. Hustler 7000 lathe, Mdl. Safe-Turn 3000 lathe & Mdl. 4000 brake lathe w/infimatic feed, cab. & access.; (2) brake fluid bleeding units

DAY 1 – TUESDAY

VALVE GRINDER
- **Sioux** Mdl. 6024 valve face grinding machine, w/wheel dresser, cabinet & access.

WELDERS
- (2) **Hobart** Mdl. Beta-Mig 200 amp DC wire feed arc
- **Miller** Mdl. MW 4150 Auto-Arc 150 amp mig

CAR WASH EQUIPMENT
- **GM** auto. car wash, chain conveyor pull-thru type, w/ wheel washers, side & top wash cloth brushes, forced air dryer, cont. chamois sys., polish/sealer wax spray unit, (2) **Cat.** Mdl. 530 5 h.p. hi-pressure pumps
- **Hanna** auto. car wash, chain conveyor pull-thru type, wheel, side & top wash units, forced air dry unit
- **Midwest Consolidated Industries** auto. car polisher, w/(4) 48" vert. cloth brushes, (1) 80" horiz. cloth brush, 15 h.p. hydraulic drive unit
- (2) **Unimac** Mdl. 202 car wash rag washing machines, stainless steel, (2) agitators w/extractors
- (2) car mat washers, brush type, stainless steel
- (3) **Magic Mist** car fragrance dispenser
- (3) **Hanna** Mdl. HF151 15 h.p. central vacuum sys., w/ squirrel cage vac. unit, collector tank & PVC vac. lines

FORKLIFT
- **Towmotor** approx. 4,500 lb. gas forklift truck, solid tire, 2-stage mast, overhead guard, manual transmission

FLUID DISTRIBUTION
- **Graco** fluid commander modular distribution system, w/ hose reels, pumps, meters & central control unit

TIRE/WHEEL EQUIPMENT
- (2) **AMMCO** Mdl. 740 tire bead & seating machines
- **AMMCO** Mdl. 502 tire mounting machine
- (4) **Coats** Mdl. 1001 direct drive wheel balancers w/access.
- **Hofmann** Mdl. IPK finish balancer on-the-car wheel bal. sys.
- **Nortron** Mdl. 7403 computer wheel balancer

DAY 1 – TUESDAY

FLOOR SWEEPERS
- **FMC** Mdl. 66HD floor mach., s/n 66-1874, gas., rider type
- **Graco** Mdl. Saturn I-32 electric floor sweeper/polisher, s/n H7-3244, walk behind, w/charger
- **Lavapavimenti** Mdl. 32 electric floor sweeper/polisher, s/n 606, walk behind, w/charger
- (2) **Dayton** Mdl. 32666 16" floor polisher

ADJUSTABLE SHELVING
- (30) Sect. 48"W x 72"D x 8'H; (246) sect. 48"W x 48"D x 8'H; (24) sect. 48"W x 48"D x 7'H; (5) sect. 48"W x 36"D x 7'H; (15) sect. 36"W x 24"D x 12'H; (368) sect. 36"W x 24"D x 8'H; (60) sect. 36"W x 24"D x 7'H; (242) sect. 36"W x 12"D x 8'H; (58) sect. 36"W x 12"D x 7'H

MISCELLANEOUS EQUIPMENT
- (4) **Weaver Photoscope** Mdl. WX-45-46 headlight testers
- (3) **Assoc.** Mdl. 6009 battery chargers/boosters
- (6) **Lincoln** Mdl. 93774 portable engine stands, 5/8-ton cap.
- (6) **Lincoln** Mdl. 93714 transmission jacks, 1/4-ton cap., 38-1/2 to 77" lift, 4-wheel, hydraulic
- (3) **Lincoln** Mdl. 93802 3/4-ton floor cranes, 28" to 108" lift, hydraulic
- **Lincoln** Mdl. 93711 floor type transmission jack, 8-3/4" to 26-3/4" lift, manual screw type
- **Ausco** Mdl. 5-51703 H-frame shop press, 15 ton hyd., 6" cyl. travel, 20-3/4" between housings, dial type press. ga.
- **AMMCO** Mdl. 2700 H-frame shop press, 30-ton hyd., s/n 3338, 26-1/2" between housings, dial type press. ga.
- **Lincoln** Mdl. 93616 H-frame shop press, 15-ton hyd., 23" between housings
- (7) **Walker** and **Milwaukee** 2 to 4-ton hyd. floor jacks

AND MUCH MORE – CALL FOR LIST

SHOP & FACTORY
